The study considers the most efficient means of satisfying the growing demand for pork, poultry and dairy products in China's large municipalities and discusses the major issues hampering the development of the sector. These constraints include difficulties in making the transition from an administered to a market system; price distortions due largely to the scope of consumer and producer subsidies; insufficient reliance on interregional and international trade to solve problems of feed and livestock product supply; lack of functional specialization within the industry; and various weaknesses of support services and the sectoral management structure. The report reviews the recent

developments in China's livestock production, the organization of the sector, the emergence of Agricultural Trade Markets (ATMs) in large cities as a result of 1985 policy reforms, and influences determining future growth of urban demand for livestock products. Each component of the industry is examined in detail, including feed supply and processing, livestock and poultry breeding, animal health and veterinary services, alternative production systems and product processing.

For patients and their loved ones, no care decisions are more profound than those made near the end of life. Unfortunately, the experience of dying in the United States is often characterized by fragmented care, inadequate treatment of

distressing symptoms, frequent transitions among care settings, and enormous care responsibilities for families. According to this report, the current health care system of rendering more intensive services than are necessary and desired by patients, and the lack of coordination among programs increases risks to patients and creates avoidable burdens on them and their families. Dying in America is a study of the current state of health care for persons of all ages who are nearing the end of life. Death is not a strictly medical event. Ideally, health care for those nearing the end of life harmonizes with social, psychological, and spiritual support. All people with advanced illnesses who may be approaching the end of life are entitled to access to high-quality, compassionate, evidence-based care, consistent with their wishes. Dying in America evaluates strategies to integrate care into a person- and family-centered, team-based framework, and makes recommendations to create a system that coordinates care and supports and respects the choices of patients and their families. The findings and recommendations of this report will

address the needs of patients and their families and assist policy makers, clinicians and their educational and credentialing bodies, leaders of health care delivery and financing organizations, researchers, public and private funders, religious and community leaders, advocates of better care, journalists, and the public to provide the best care possible for people nearing the end of life.

The 52 papers in this vary in content from summaries or state-of-knowledge treatments, to detailed contributions that describe new species. Although the distinction is subtle, the title (Vertebrate Paleontology in Utah) indicates the science of paleontology in the state of Utah, rather than the even more ambitious intent if it were given the title "Vertebrate

Paleontology of Utah” which would promise an encyclopedic treatment of the subject. The science of vertebrate paleontology in Utah is robust and intense. It has grown prodigiously in the past

decade, and promises to continue to grow indefinitely. This research benefits everyone in the state, through Utah’s museums and educational institutions, which are the direct beneficiaries.
