structures books in Java and C++, this textbook offers a comprehensive, definitive introduction to data structures in Python by authoritative authors. Data Structures and Algorithms in Python is the first authoritative object-oriented book available for the Python data structures course. Designed to provide a comprehensive introduction to data structures and algorithms, including their design, analysis, and implementation, the text will maintain the same

general structure as Data Structures and Algorithms in Java and Data Structures and Algorithms in C++.

 The UN Environment Emissions Gap Report assesses the latest scientific studies on current and estimated future greenhouse gas emissions and compares these with the emission levels permissible for the world to progress on a least-cost pathway to achieve the goals of the Paris Agreement. This difference between

□where we are likely to be and where we need to be□ is known as the □emissions gap□. The report explores some of the most important options available for countries to bridge the gap.

 This volume on communication in transdisciplinary teams is timely for two reasons: the number and size of research teams has increased, and communication is a

primary criterion for success in both inter- and trans-disciplinary collaborations. This introduction provides an overview of theory and practice aimed at orienting readers to pertinent literature then previews the chapters that follow. First, though, preliminary definition is in order. Relevant insights are dispersed across literatures on both inter- and trans-disciplinarity, raising the question of how they differ (Klein, 2017). Interdisciplinarity (ID) integrates

information, data, methods, tools, concepts, or theories from two or more disciplines or bodies of knowledge in order to address a complex question, problem, topic, or theme. Solo interdisciplinarians work independently, but communication across boundaries is essential to collaboration.

Transdisciplinarity (TD) transcends disciplinary worldviews by generating overarching synthetic frameworks and, in a connotation that arose in the late 20th century,

problem-oriented research that crosses boundaries of academic, public, and private spheres by engaging stakeholders in co-production of knowledge. It also connotes teamwork aimed at generating new conceptual and methodological frameworks. We combine insights from literatures on inter- and trans-disciplinarity in order to acknowledge parallels between the two concepts. Authors of chapters of this volume differ in their

conceptualization and use of the terms, as well as the focus of their research. We preserve their original uses of the two terms but synthesize lessons from both literatures in order to arrive at a more robust understanding of the dynamics of communication in teamwork that transcends knowledge boundaries. In the course of our discussion, we also employ nine related concepts defined in the text box: including pidgin and creole, collaborative

interdisciplinary reasoning, communicative action, collaborative communication competence, team climate, socio-cognitive platforms for interdisciplinary collaboration, a cooperation and communication culture, mutual and integrative learning, and knowledge convergence.

Drawing from the latest developments and practices from the field, **MANAGEMENT INFORMATION SYSTEMS, 7e** provides a clear emphasis on the business and management elements of information technology. The book

offers the most current coverage available, including expanded discussions of social networking, IT security, mobile computing, and much more. From overviews of the information age to online business and business intelligence, readers gain a sound balance of the technical and business elements of information technology. In addition, numerous business cases integrated throughout enable readers to apply what they learn to real-world practice--equipping

them with skills they can immediately put into action in the business world. Important Notice: Media content referenced within the product description or the product text may not be available in the ebook version.

 The promotion and dissemination of knowledge is a crucial part of the academic community. This is

accomplished through the publication of new research through both traditional and emerging venues. Scholarly Communication and the Publish or Perish Pressures of Academia is an authoritative reference source for the latest material on methods and available networks for the publication of contemporary academic research. Highlighting innovative writing styles, ethical considerations, and marketing avenues, this book is ideally designed for researchers,

upper-level students, scholars, professionals, and practitioners actively involved in the publication of academic research. Collecting Qualitative Data SAGE Publications "Collections: A Journal for Museum and Archives Professionals" is a multi-disciplinary peer-reviewed journal dedicated to the discussion of all aspects of handling, preserving, researching, and organizing collections. Curators, archivists, collections managers, preparators, registrars, educators, students, and

others contribute. *Wireless Communication and Network* Cengage Learning This book constitutes the refereed proceedings of the 12th International Conference on Cryptology and Network Security, CANS 2013, held in Paraty, Brazil, in November 2013. The 18 revised full papers presented together with four invited talks were carefully reviewed and selected from 57 submissions. The papers are organized in topical sections on cryptanalysis,

zero-knowledge protocols, distributed protocols, network security and applications, advanced cryptographic primitives, and verifiable computation. *Manager Selection* Waxmann Verlag This updated and expanded edition of *Persuasive Communication* offers a comprehensive introduction to persuasion and real-world decision making. Drawing on empirical research from social psychology, neuroscience, business

communication research, cognitive science, and behavioral economics, Young reveals the thought processes of many different audiences—from investors to CEOs—to help students better understand why audiences make the decisions they make and how to influence them. The book covers a broad range of communication techniques, richly illustrated with compelling examples, including resumes, speeches, and slide presentations, to help students recognize

persuasive methods that do, and do not, work. A detailed analysis of the emotions and biases that go into decision making arms students with perceptive insights into human behavior and helps them apply this understanding with various decision-making aids. Students will learn how to impact potential employers, clients, and other audiences essential to their success. This book will prove fascinating to many, and especially useful for students of persuasion, rhetoric, and

business communication. *Core Skills for Social and Health Research IGI Global*
Text readability is at the core of successful reading instruction and language learning. To counteract the challenges of complex reading content, text leveling is a vital necessity for readers with limited language access. A transdisciplinary analysis of reading development and linguistic interrelations builds the theoretical foundation of the base-1 method. This method

focuses solely on structural and functional text elements on the word, sentence and cohesion level. But this book also discusses the significance of other prevalent readability factors, such as the reader's language knowledge or socio-cultural background. The base-1 method is designed to level early reading texts in German and other alphabetic languages. Experimental tests with a German immersion population has led to a preliminary

calibration to demonstrate the validity of this approach. Bernd Nuss ist erfahrener Immersionslehrer in verschiedenen Programmen, die sich über Nord-, Zentral- und Südamerika erstrecken. An der E. E. Waddell Language Academy wirkt er schulintern als Immersion Facilitator, kooperiert mit Bildungsorganisationen und betreut die Praktika von Gaststudierenden an der Schule. Bernd Nuss has worked as an educator and facilitator in

English and German language immersion programs all over the Americas and in Europe. In this capacity, he has also been collaborating as a researcher with universities and other educational institutions in Europe, Asia, and the USA.

This collection of essays provides a comprehensive assessment of the legal and policy approaches to maritime counter-piracy

adopted by the EU and other international actors over the last few years. As the financial cost of Somali piracy for the maritime industry and the world economy as a whole was estimated to have reached \$18 billion by 2010, the phenomenon of piracy at sea has steadily grown in significance and has recently attracted the attention of international policy makers. Moreover, piracy is intrinsically linked to state failure and other pathologies bred by it, such as organised crime and terrorism. This

book adopts a holistic approach to the topic, examining approaches to piracy as these emerge in different geographical areas, as well as tackling the central issues which counter-piracy raises in terms of the most topical aspects of international law (international humanitarian law and armed conflict, piracy and terrorism, use of force). It also focuses on the approach of the EU, placing counter-piracy in its broader legal context. Providing a detailed doctrinal exploration of

the issues which counter-piracy raises, it emphasises and draws upon the insights of the practice of counter-piracy by bringing together academic lawyers and the legal advisers of the main actors in the area (EU, US, NATO, UK). The book raises fundamental questions about the law and practice of international law: are the rules of the international law of the sea on piracy still relevant? To what extent has the shared interest of international actors in tackling piracy

given rise to common practices? Do the interactions among the actors examined in the book suggest fragmentation or unity of the international legal order? Is it premature to view these interactions as signalling the gradual emergence of global law in the area? This common analytical frame of reference is underlined by the concluding part, which draws these threads together. The book will be of interest to legal scholars, political scientists and

international relations theorists, as well as decision-makers and students of law, politics and international relations.

Advanced Research on Automation, Communication, Architectonics and Materials III CRC Press

This book critically examines the global diffusion and local reception of resilience through the implementation of Disaster Risk Reduction (DRR) programmes in Pacific and Caribbean

island states. Global efforts to strengthen local disaster resilience capacities have become a staple of international development activity in recent decades, yet the successful implementation of DRR projects designed to strengthen local resilience remains elusive. While there are pockets of success, a gap remains between global expectations and local realities. Through a critical realist study of global and local worldviews of resilience in

the Pacific and Caribbean islands, this book argues that the global advocacy of DRR remains inadequate because of a failure to prioritise a person-orientated ethics in its conceptualization of disaster resilience. This regional comparison provides a valuable lens to understand the underlying social structures that makes resilience possible and the extent to which local governments, communities and persons interpret and modify their behaviour on risk when

faced with the global message on resilience. This book will be of much interest to students of resilience, risk management, development studies, and area studies. *Designing and Managing Your Research Project* Springer Science & Business Media

The post-communist development of media

systems has been uneven in the countries of the region. Television and newspapers, together with the emergence of social media, have had great influence on the political debate in various countries. Ownership of the media has been a factor in many instances. The integration of traditionally isolated Central/Eastern Europe into larger, worldwide trends has fundamentally changed the way we look at the media in this region. This volume proposes to address the

transition of the media and communication industries in the contemporary period. The contributions discuss, among other things, the obstacles that still remain for the media to play an effective watchdog role in the new democracies, and whether the advent of the Internet and social media has helped or hindered the transformation to a powerful, independent media. The discussion further examines whether advertising agencies have targeted post-communist citizens differently than

those in Western European countries and if the media markets in the post-communist region are fundamentally different than in Western Europe and North America. A second focus of the volume is the media coverage of social issues like domestic violence, which is intended to draw attention to these issues and influence policy in a more aware and open society. This establishes the trend of post-communist media following the example of

western media practice. The implications of the Central European media transformation for the newly transforming media markets in the post-Soviet space suggest a new phase in the development of the medium. The impact of global influences on regional expression is an important aspect of the political and social changes that are underway. This volume makes an important interdisciplinary contribution in examining the development of the

media.

Teacher Education and Practice, a peer-refereed journal, is dedicated to the encouragement and the dissemination of research and scholarship related to professional education. The journal is concerned, in the broadest sense, with teacher preparation, practice and policy issues related to the teaching profession, as well as being concerned with learning in the school

setting. The journal also serves as a forum for the exchange of diverse ideas and points of view within these purposes. As a forum, the journal offers a public space in which to critically examine current discourse and practice as well as engage in generative dialogue. Alternative forms of inquiry and representation are invited, and authors from a variety of backgrounds and diverse perspectives are encouraged to contribute. *Teacher Education & Practice* is published by
