NREL: This parabolic trough 73% efficient - Solar Power World A Parabolic Trough Solar Power Parabolic Troughs have Concentrated Solar Power, heats water (fluid) up to 400 degrees C. This can heat water safe to drink or make steam for electricity. The parabolic trough operates at about 75% efficiency and at 495 square foot can collect approximately 270 kWh / 10 hours on a clear day. Parabolic Trough Concentrated Solar Power Parabolic Trough. DOE funds solar research and development (R&D) in parabolic trough systems as one of four concentrating solar power (CSP) technologies aiming to meet the goals of the SunShot Initiative.

Parabolic troughs, which are a type of linear concentrator, are the most mature CSP technology with over 500 megawatts (MW) operating worldwide. Parabolic Trough | Department of Energy A parabolic trough is a type of solar thermal collector that is straight in one dimension and curved as a parabola in the other two, lined with a polished metal mirror. The sunlight which enters the mirror parallel to its plane of symmetry is focused along the focal line, where objects are positioned that are intended to be heated. Parabolic trough - Wikipedia Parabolic Trough Power Plants (PTPP) are thus far mostly developed CSP thermal plants that are operating commercially. They consist of a solar field filled with hundreds or thousands of solar collector assemblies (SCA). Concentrated Solar

Power:Parabolic Trough Power PlantParabolic Trough Projects Concentrating solar power (CSP) projects that use parabolic trough systems are listed below alphabetically by project name. You can browse a project profile by clicking on the project name.Parabolic Trough - SolarPACESOLAR PARABOLIC TROUGH 1.0 System Description Parabolic trough technology is currently the most proven solar thermal electric technology. This is primarily due to nine large commercial-scale solar power plants, the first of which has been operating in the California Mojave Desert since 1984.SOLAR PARABOLIC TROUGH - US Department of EnergyAssessment of Parabolic Trough and Power Tower Solar Technology Cost and Performance Forecasts National Renewable Energy Laboratory 1617 Cole Boulevard Golden, Colorado 80401-3393 NREL is a U.S. Department of Energy Laboratory Operated by Midwest Research Institute • Battelle • Bechtel Contract No. DE-AC36-99-GO10337Assessment of Parabolic Trough and Power Tower Solar ...Utility scale parabolic trough solar concentrators harness the sun's energy to make steam for electricity generation.
