 Leading developers and researchers report on what the next
 generation of digital work environments may look like, analyzing
 the theory and practice of designing "out of the box" to facilitate
 multitasking, collaboration, and multiple technologies. The
 computer's metaphorical desktop, with its onscreen windows and
 hierarchy of folders, is the only digital work environment most
 users and designers have ever known. Yet empirical studies show
 that the traditional desktop design does not provide sufficient
 support for today's real-life tasks involving collaboration,
 multitasking, multiple roles, and diverse technologies. In *Beyond
 the Desktop Metaphor*, leading researchers and developers
 consider design approaches for a post-desktop future. The
 contributors analyze the limitations of the desktop environment--
 including the built-in conflict between access and display, the
 difficulties in managing several tasks simultaneously, and the
 need to coordinate the multiple technologies and information
 objects (laptops, PDAs, files, URLs, email) that most people use
 daily--and propose novel design solutions that work toward a
 more integrated digital work environment. They describe systems
 that facilitate access to information, including Lifestreams,
 Haystack, Task Factory, GroupBar, and Scalable Fabric, and they
 argue that the organization of work environments should reflect
 the social context of work. They consider the notion of activity as
 a conceptual tool for designing integrated systems, and point to
 the Kimura and Activity-Based Computing systems as examples.
Beyond the Desktop Metaphor is the first systematic overview of
 state-of-the-art research on integrated digital work environments.
 It provides a glimpse of what the next generation of information
 technologies for everyday use may look like--and it should inspire
 design solutions for users' real-world needs.

 Here are the confessions of a vampire. Hypnotic, shocking, and
