"He looks like he could plow my north field without a horse." Sonja Watts needs to re-enter the workforce after divorcing her husband of thirteen years. Taking the advice of her sister Birdie and her best friend Estelle, she signs up for a six-week course for entrepreneurs; hoping that she will learn everything she needs to know to build a business to support herself and her

kids. On the first night of class, Sonja is able to ignore the fact that most of the students are younger than her by ten years or more. It's what she expected. But when the instructor walks in, she debates packing up her new twelve-hundred dollar laptop and walking out. Sonja can't remember the last time she looked at a man with little more interest than she would give a sturdy dining room table. She isn't frigid... just disinterested. But wow, did Atlas James grab her interest. Atlas hasn't been interested in dating since he moved back home from California. Adjusting to newfound success in the town

where everyone sees him as that big, geeky guy who cut grass for pocket change when they were in high school has been awkward. Aside from a couple of one night stands, he hasn't really wanted to pursue a relationship with anyone until sweet, shy Sonja signs up for his class. Compact, curvy, and juicy in all the right places, being in the same room Sonja Watts ignites all of those giddy feelings he felt when he had his first crush. He wants to know her and he's pretty sure she wants to know him -- even though she seems fixated on the fact that he's younger than her. With her future riding

on the success of her new business, Sonja has no time for distraction. Will she be able to keep her eyes on her own paper or will they remain glued to Atlas's biceps and thick thighs?

 Providing a comprehensive survey of the origin, the fundamental properties, and the technology of utilization of the lignites

of North America, this book will be of particular interest to professional scientists and engineers working in coal research or coal technology. Coals display a continuum of properties, often with no sharp, steep change between ranks and thus the book restricts the discussion strictly to lignites (with the occasional comparisons with other coals). There is a very extensive index, making the contents of the book easily accessible to the reader. Harrison's Manual of Medicine, 18th Edition McGraw Hill Professional

Historic sites, memorials, national parks, museumsewe live in an age in which heritage is ever-present. But what does it mean to live amongst the spectral traces of the past, the heterogeneous piling up of historic materials in the present? How did heritage grow from the concern of a handful of enthusiasts and specialists in one part of the world to something which is considered to be universally cherished? And what concepts and approaches are necessary to understanding this global obsession? Over the decades, since the adoption of the World Heritage Convention, various e~crisese(tm) of definition have significantly influenced the ways in which heritage is classified, perceived and managed in contemporary global societies. Taking an interdisciplinary approach to the many tangible and

intangible e~thingse(tm) now defined as heritage, this book attempts simultaneously to account for this global phenomenon and the industry which has grown up around it, as well as to develop a e~toolkit of conceptse(tm) with which it might be studied. In doing so, it provides a critical account of the emergence of heritage studies as an interdisciplinary field of academic study. This is presented as part of a broader examination of the function of heritage in late modern societies, with a particular focus on the changes which have resulted from the globalisation of heritage during the late twentieth and early twenty-first centuries. Developing new theoretical approaches and innovative models for more dialogically democratic heritage decision making processes, *Heritage: Critical Approaches* unravels the relationship between heritage and the experience of late modernity, whilst reorienting heritage so that it might be more productively connected with other pressing social, economic, political and environmental issues of our time.
