 This book provides a  
 detailed analysis of  
 absorption refrigeration  
 systems, covering single  
 effect to multi-effect  
 systems and their  
 applications. Both the first  
 and second laws of  
 thermodynamics are  
 discussed in relation to  
 refrigeration systems to  
 show how system  
 performance differs from  
 one law to another.

Comparative energy and exergy analyses and assessments of single effect, double effect, triple effect and quadruple effect absorption refrigeration system are performed to illustrate the impact of an increase in the number of effects on system performance. In particular, the second law (exergy) formulation for absorption refrigeration systems, rarely discussed by other works, is covered in detail. Integrated Absorption Refrigeration Systems will help researchers, students and

instructors in the formulation of energy and exergy efficiency equations for absorption refrigeration systems. David Knighton's best-selling book looks at the wide range of forms developed by natural rivers and the processes

responsible for that development. The book combines empirical and theoretical approaches, and provides a critical assessment of the many schools of thought which have emerged for dealing with adjustment in the fluvial system. It is fully illustrated throughout by a superb range of figures, photographs and tables. Starting with the network scale, the book examines the interaction of hillslopes, drainage networks and channels, and goes on to considerations of

catchment hydrology and catchment denudation. Fluvial processes are analysed in detail, from the mechanics of flow to sediment transport and deposition. Detailing the major components of river channels, the book examines the nature of river adjustment, particularly with respect to equilibrium concepts, and concludes with a look at channel changes through time, affected by flood discharges, climatic change and human activities.
