There is an herbal remedy for most ailments - and you will find the most important ones in this concise pocket guide. Co-authored by Karin Kraft, one of the members of the German Commission E, and Christopher Hobbs, a renowned North-American herbalist, this handy pocket guide gives you the decisive facts about important medicinal herbs, taking into consideration both major European monographs (Commission E and ESCOP) and up-to-date clinical trials. The book goes on to inform the reader on the usage of herbal remedies for a number of common indications. The book gives first-hand, easy to access information on the administration of herbal remedies for the medical practitioner and herbal therapist alike. Profit from the wealth of German tradition, extended by North American experience in the usage of herbal medicines.

*Gemmotherapy, and the Scientific Foundations of a Modern Meristemotherapy* Edizioni Mondadori

This is the official text for the National Association of Science Writers. In the eight years since the publication of the first edition of *A Field Guide for Science Writing*, much about the world has changed. Some of the leading issues in today's political marketplace - embryonic stem cell research, global warming, health care reform, space exploration, genetic privacy, germ warfare - are informed by scientific ideas. Never has it been more crucial for the lay public to be scientifically literate. That's where science writers come in. And that's why it's time for an update to the Field Guide, already a staple of science writing graduate programs across the country. The academic community has recently recognized how important it is for writers to become more sophisticated, knowledgeable, and skeptical about what they write. More than 50 institutions now offer training in science writing. In addition mid-career fellowships for science writers are growing, giving journalists the chance to return to major universities for specialized training. We applaud these developments, and hope to be part of them with this new edition of the Field Guide. In *A Field Guide for Science Writers*, 2nd Edition, the editors have assembled contributions from a collection of experienced journalists who are every bit as stellar as the group that contributed to the first edition. In the end, what we have are essays written by the very best in the science writing profession. These wonderful writers have written not only about style, but about content, too. These leaders in the profession describe how they work their way through the information glut to find the gems worth writing about. We also have chapters that provide the tools every good science writer needs: how to use statistics, how to weigh the merits of conflicting studies in scientific literature, how to report about risk. And, ultimately, how to write.

*The Man Who Was Poe* Routledge

Demonstrates how society favors the beautiful and how better-looking people experience startling

but undeniable benefits in various aspects of life. This title shows that the attractive are more likely to be employed, work more productively and profitably, negotiate loans with better terms, and have more handsome and highly educated spouses.

This is the third volume of our series *Progress in Anti-Cancer Chemotherapy*. Following the strategy of the first two volumes, it covers selected aspects of progress in this fast moving field of Oncology, with contributions from some of the world's best known leaders in both basic and clinical research. This year we focused on seven areas: Three prominent Clinical investigators reviewed conceptual advances in cancer research. Dr Buzdar presented a history and overview of the protection of human subjects who participate in clinical research, and the mechanisms developed to assure the ethical conduct of research on human beings. Frei reviewed an exciting and rapidly moving area of chemotherapy of solid tumors, including a cogent discussion of the issues related to dose-intensification. Fisher summarized conceptual advances in our therapeutic approach to breast cancer and the paradigm shifts that lead us to our current management strategies. From this summary he projected breast cancer research into the future, a daunting task under any circumstance. Fundamental research in cancer biology has been responsible for our improved understanding of the development and progression of malignant disease. Such understanding will lead to improved diagnosis, therapy, and eventually, prevention. Isaacs reviews the area of hereditary breast cancer, a topic undergoing rapid transformation and with multiple implications in the daily practice of medicine. Fidler, an international expert in metastasis research reviews the potential utility of angiogenesis inhibitors in research and the therapeutic ramifications.

By now most of us are aware of the threats looming in the food world. The best-selling *Fast Food Nation* and other recent books have alerted us to such dangers as genetically modified organisms, food-borne diseases, and industrial farming. Now it is time for answers, and *Slow Food Nation* steps up to the challenge. Here the charismatic leader of the Slow Food movement, Carlo Petrini, outlines many different routes by which we may take back control of our food. The three central principles of the Slow Food plan are these: food must be sustainably produced in ways that are sensitive to the environment, those who produce the food must be fairly treated, and the food must be healthful and delicious. In his travels around the world as ambassador for Slow Food, Petrini has witnessed firsthand the many ways that native peoples are feeding themselves without making use of the harmful methods of the industrial complex. He relates the wisdom to be gleaned from local cultures in such varied places as Mongolia, Chiapas, Sri Lanka, and Puglia. Amidst our crisis, it is critical that Americans look for insight from other cultures around the world and begin to build a new and better way of eating in our communities here.

Virtual endoscopy progressively enters the real world The development of virtual reality is one of the most striking features of our Western societies. Beside children games and movies, its scope has expanded to medical imaging through 3D CT scan surface or volume reconstructions. Whatever the site clinicians are able to perform real endoscopy (RE), radiologists can now also provide virtual endoscopy (VE) images. VE enters our medical practice. The next question is to weigh the pros and cons. VE has the unique advantage to offer high-quality images obtained through a noninvasive and well-tolerated procedure performed in outpatients. Compared to RE, it carries no risk of bleeding, perforation or transmission of viruses. Importantly, VE can pass high-grade stenoses affecting large bowel, urinary tract or tracheobronchial tree, and visualize areas hard to visit by optic fibers such as intracranial regions. 3D VE images can be commented with patients, and this might reduce potential misunderstanding and its medico-legal consequences. Last but not least, VE is the sole alternative offered both to those who refuse RE, and to severely ill elderly patients. Then, should we consider VE as the *Deus ex machina* of modern medical imaging - with CT scan as *china* - ? Clearly, the answer is no, given VE knows several limits and pitfalls. One of the most important merits of this book is to discuss honestly these aspects. First, VE will never allow to perform biopsies or resections.

Requiring no prior hacking experience, *Ethical Hacking and Penetration Testing Guide* supplies a complete introduction to the steps required to complete a penetration test, or ethical hack, from beginning to end. You will learn how to properly utilize and interpret the results of modern-day hacking tools, which are required to complete a penetration test. The book covers a wide range of tools, including Backtrack Linux, Google reconnaissance, MetaGooFil, dig, Nmap, Nessus, Metasploit, Fast Track Autopwn, Netcat, and Hacker Defender rootkit. Supplying a simple and clean explanation of how to effectively utilize these tools, it details a four-step methodology for conducting an effective penetration test or hack. Providing an accessible introduction to penetration testing and hacking, the book supplies you with a fundamental understanding of offensive security. After completing the book you will be prepared to take on in-depth and advanced topics in hacking and penetration testing. The book walks you through each of the steps and tools in a structured, orderly manner allowing you to understand how the output from each tool can be fully utilized in the subsequent phases of the penetration test. This process will allow you to clearly see how the various tools and phases relate to each other. An ideal resource for those who want to learn about ethical hacking but don't know where to start, this book will help take your hacking skills to the next level. The topics described in this book comply with international standards and with what is being taught in international certifications.

This is Strehlow's most widely regarded work and the culmination of his anthropological work related to the Aranda (Arunta) people of the Alice Springs region. In this work Strehlow records the patrilineal chants or songs of the Aranda people and puts them into a wider context of totemic cultural understanding. Of particular interest is Chapter 10, the love songs of the Aranda people, which pre-date European romantic conventions by several thousand years.

This book discusses all aspects of non-pharmacologic approaches to primary and secondary CVD prevention. It highlights the strength of evidence for particular diet styles in CVD prevention, including plant-based diets, the Mediterranean diet, the DASH diet, and low-carbohydrate diets. Chapters present evidence and future directions for diet and nutrition in diseases related to CVD, such as dyslipidemia, cardiometabolic disease (pre-diabetes, the metabolic syndrome, type-2 diabetes mellitus), and obesity. Finally, the book reviews novel and emerging aspects of dietary intervention in CVD prevention, such as dietary approaches to inflammation and the role of the microbiome in CVD. Up-to-date, evidence-based, and clinically oriented, *Prevention and Treatment of Cardiovascular Disease: Nutritional and Dietary Approaches* is an essential resource for physicians, residents, fellows, and medical students in cardiology, clinical nutrition, family medicine, endocrinology, and lipidology.

A range of electronic corpora has become accessible via the WWW and CD-ROM. This coincides with improvements in standards governing the collecting, encoding and archiving of such data. This book develops similar standards for enriching and preserving 'unconventional' data: the fragmentary texts and voices left to us as accidents of history.

How do we learn to die? Most of us spend our lives avoiding that question, but this luminous book--a major best-seller in France--answers it with a directness and eloquence that are nothing less than transforming. As a psychologist in a hospital for the terminally ill in Paris, Marie de Hennezel has spent seven years tending to people who are relinquishing their hold on life. She tells the stories of her patients and their families. de Hennezel teaches us how to turn death--our loved ones' or our own--from something lonely and agonizing into a sacred passage. She discusses the importance of an honest reckoning, the value of ritual, the necessity of touch. In imparting these lessons, *Intimate Death* becomes a guide to living more fully, more intensely, than we had thought possible.

"Unique...Of all the books I have read about the endings of our lives, this elegiac testimony has taught me the most."--Sherwin B. Nuland, M.D., author of *How We Die* "The quiet, obvious truths [de Hennezel] discovers in her work--these things have a kind of cumulative power."--Washington Post Book World From the Trade Paperback edition.

Imaging techniques are often called upon in oncology in virtue of their essential role in tumor diagnosis, extension work up to various organs and detection of relapse. They are also indispensable in research and in clinical practice, allowing an objective assessment of tumoral regression in patients undergoing treatment. It is currently impossible to establish the management plan of a cancer patient or to obtain follow-up of such a patient under treatment without clinical and imaging confrontation.
