Whitcup and Nussenblatt's Uveitis JP Medical Ltd

The purpose of this book is to provide a concise but precise consensus on the impact of uveitis in children and on the diagnostic and therapeutic approaches. Experts in Ocular Immunology and Rheumatology were convened in an effort to provide guidelines in the diagnosis and treatment of uveitis in children. The result of those efforts are captured in this monograph.

According to the Autoimmune Diseases Coordinating Committee (ADCC), between 14.7 and 23.5 million people in the USA - up to eight percent of the population are affected by autoimmune disease. Autoimmune diseases are a family of more than 100 chronic, and often disabling, illnesses that develop when underlying defects in the immune system lead the body to attack its own organs, tissues, and cells. In Handbook of Autoimmune Disease, the editors have gathered in a comprehensive handbook a critical review, by renowned experts, of more than 100 autoimmune diseases, divided into two main groups, namely systemic and organ-specific autoimmune diseases. A contemporary overview of these conditions with special emphasis on diagnosis is presented. Each chapter contains the essential information required by attending physicians as well as bench scientists to understand the definition of a specific autoimmune disease, the diagnostic criteria, and the treatment.

Essentials of Ophthalmology: For Medical School and Beyond is a concise reference text for the medical undergraduates and residents, but the contents will also benefit family physicians who really are the first line of eye-care givers in the community. Highly illustrated with 200 colour clinical pictures and illustrations, the book is written by the multi-disciplinary faculty of the Department of Ophthalmology, National University Health System, Singapore. The authors constantly asked themselves 'how much is too much' and deliberately attempted to weed out any 'excess' for the benefit of the target readers. The content is written in a point format with lucid language. Emphasis has been focused on information that constitutes essential ophthalmic 'core conditions and problems' of the current medical undergraduate curriculum. Every section in the book has 'learning objectives' and a 'take home message' to facilitate quick learning. The book embraces a

practical guide to the study of ocular diseases, basic methods of investigations and treatment where applicable.

This book explains how to use intravitreal steroids optimally in the management of patients with intraocular inflammation (uveitis) and macular edema. The rationale for this treatment approach is first explained by examining the pathophysiology of these disease entities, with particular attention to the major role of inflammatory processes. Devices for the delivery of steroids to the eye are discussed, and guidance provided on the role of imaging studies before, during, and after steroid therapy. The value of different steroidal approaches is then considered in detail. Other topics addressed include the use of steroids as a surgical adjunct and within a combination strategy. Uveitis and macular edema are common sight-threatening diseases or complications of diabetes and retinal vein occlusion for which no adequate treatment was available until recently. Both trainees and practitioners will find *Intravitreal Steroids* to be an invaluable aid in combating these blinding diseases.
