Abatement of Environmental Pollutants: Trends and Strategies addresses new technologies and provides strategies for environmental scientists, microbiologists and biotechnologists to help solve problems associated with the treatment of industrial wastewater. The book helps readers solve pollution challenges using microorganisms in bioremediation technologies, including discussions on global technologies that have been adopted for

the treatment of industrial wastewater and sections on the lack of proper management. Moreover, limited space, more stringent waste disposal regulations and public consciousness have made the present techniques expensive and impractical. Therefore, there is an urgent need to develop sustainable management technologies for industries and municipalities. To remove the damaging effect of organic pollutants on the environment, various new technologies for their degradation have been recently discovered. Covers bioremediation of petrochemical pollutants, such as Benzene, Toluene, Xylene, Ethyl Benzene, and phenolic compound Includes discussions on genetic engineering microbes and their potential in pollution abatement Contains information on plant growth promoting bacteria and their role in environment management

The UNEP Year Book series examines emerging environmental issues and policy-relevant events and developments. It also presents the latest trends using key environmental indicators. This 2014 edition shows that changes in the Arctic will have consequences far beyond this fragile region and that they require an urgent international response. The volume of chemicals in the world continues to grow, with a shift in production from developed to developing countries. To meet the goal of producing and using chemicals in ways that minimize significant impacts on health and the environment by 2020, efforts must be made to reduce the use of toxic chemicals, promote safer alternatives and build capacity for sound chemicals management. Adequate information for minimizing chemical risks is essential to support these efforts.

Based on the true account of a boy's harrowing journey through the vast wilderness of the Katahdin Mountains, *Lost on a Mountain in Maine* is a gripping survival story for all ages. Twelve-year-old Donn Fendler steps away from his Boy Scout troop for only a minute, but in the foggy mountains of Maine, a minute is all it takes. After hours of trying to find his way back, a nervous and tired Donn falls down an embankment, making it impossible for him to be found. One sleepless night goes by, followed by a second . . . and before Donn knows it, almost two weeks have passed, leaving him starving, scared, and delirious. With rainstorms, black bears, and his fear of being lost forever, Donn's journey is a physically, mentally, and emotionally charged story told from the point of view of the boy who lived it. Don't miss this thrilling survival story, a proven high-interest winner that pulls in readers the way *Hatchet*, *My Side of the Mountain*, and the *I Survived* books do.

Taking as its starting point the interdependence of the economy and the natural environment, this book provides a comprehensive introduction to the emerging field of ecological economics. The authors, who have written extensively on the economics of sustainability, build on insights from both mainstream economics and ecological sciences. Part I explores the interdependence of the modern economy and its environment, while Part II focuses mainly on the economy and on economics. Part III looks at how national governments set policy targets and the instruments used to pursue those targets. Part IV examines international trade and institutions, and two major global threats to sustainability - climate change and biodiversity loss. Assuming no prior knowledge of economics, this textbook is well suited for use on interdisciplinary environmental science and management courses. It has extensive student-friendly features including discussion questions and exercises, keyword highlighting, real-world illustrations, further reading and website addresses.

For too long, cities have been thought of as environmental blackspots, with high levels of air and soil pollution, overcrowding, poor sanitation and growing waste disposal problems. This book takes a more positive attitude: cities can be made to work sustainably. Their high population density can work in the environment's favour if they can achieve efficient use of resources such as energy and water supplies, and improve transport and infrastructure. The best cities today are clean, resource efficient, green and pleasant, and not only act as cultural and entertainment centres, but also harbour great varieties of wildlife. *Making Cities Work* looks at the vital role which local authorities can - and must - play in safeguarding and developing our towns and cities. Their role is crucial, and the aim of the book is to make governments, international bodies and local authority associations aware of how potential environmental and social problems can be overcome, and what can be achieved. This book is being written by urban development experts, based on material supplied by the world's leading city associations. It is being edited by one of the world's most highly regarded cultural ecologists, and has been commissioned by UNHCS for the Habitat II conference. Clearly written, accessible, and fully illustrated throughout with photographs, figures and graphs, it is ideal for students, fascinating reading for the general public, and essential for those involved in local authorities, planning and development.

An examination of why paper continues to fill our offices and a proposal for better coordination of the paper and digital worlds. Over the past thirty years, many people have proclaimed the imminent arrival of the paperless office. Yet even the World Wide Web, which allows almost any computer to read and display another computer's documents, has increased the amount of printing done. The use of e-mail in an organization causes an average 40 percent increase in paper consumption. In *The Myth of the Paperless Office*, Abigail Sellen and Richard Harper use the study of paper as a way to understand the work that people do and the reasons they do it the way they do. Using the tools of ethnography and cognitive psychology, they look at paper use from the level of the individual up to that of organizational culture. Central to Sellen and Harper's investigation is the concept of "affordances"—the activities that an object allows, or affords. The physical properties of paper (its being thin, light, porous, opaque, and flexible) afford the human actions of grasping, carrying, folding, writing, and so on. The concept of affordance allows them to compare the affordances of paper with those of existing digital devices. They can then ask what kinds of devices or systems would make new kinds of activities possible or better support current activities. The authors argue that paper will continue to play an important role in office life. Rather than pursue the ideal of the paperless office, we should work toward a future in which paper and electronic document tools work in

concert and organizational processes make optimal use of both.

Increasing interest has been shown in recent decades in matters relating to ecology, especially under the influence of the debate on climate change. The scope of ecology is, of course, much wider than that of climate alone, and involves in addition not only human relation with all species of animals and plants but also those conditions of human societies (material and intellectual) that influence our responses to the opportunities and challenges posed by nature. It is with this wider sense in mind that the history of ecology has been treated in this volume. Extensive extracts from sources have been provided; and there are special notes on ecology, climatology, zooarchaeology, natural history, and forestry.

In *Unbowed*, Nobel Prize winner Wangari Maathai recounts her extraordinary journey from her childhood in rural Kenya to the world stage. When Maathai founded the Green Belt Movement in 1977, she began a vital poor people's environmental movement, focused on the empowerment of women, that soon spread across Africa. Persevering through run-ins with the Kenyan government and personal losses, and jailed and beaten on numerous occasions, Maathai continued to fight tirelessly to save Kenya's forests and to restore democracy to her beloved country. Infused with her unique luminosity of spirit, Wangari Maathai's remarkable story of courage, faith, and the power of persistence is destined to inspire generations to come.

Environmental Economics: Theory and Applications is a comprehensive treatise on environmental economics with special focus on theories of collective action, environmental policy and management. A balanced blend of theory and practice, this book outlines the basic concepts, theories, tools and techniques of environmental economics, which not only enable the reader to diagnose the root causes of environmental problems and identify practicable solutions, but also facilitate the design of environmental policy and management strategies. The book combines: - innovative synthesis of concepts, ideas and theories; - presentation in a simple, easy-to-comprehend language and style; - illustrations and examples from real life situations; - latest available research data on various environmental problems, including global warming, acid rain and depletion of the ozone layer; and - special focus on environmental policy and management. Useful as a textbook at graduate and post-graduate levels, it caters to the needs of students, teachers, researchers, environment managers and policy-makers in India. **Important Bird Areas of Maharashtra** Oxford University Press This report draws on case studies to explore the relationship between environmentally-related taxation and innovation to see whether taxation can spur innovation and if so, what types.
