SAGE Publications

Six months after its American introduction in 1985, the Yugo was a punch line; within a year, it was a staple of late-night comedy. By 2000, NPR's Car Talk declared it "the worst car of the millennium." And for most Americans that's where the story begins and ends. Hardly. The short, unhappy life of the car, the men who built it, the men who imported it, and the decade that embraced and discarded it is rollicking and astounding, and one of the greatest untold business-cum-morality tales of the 1980s. Mix one rabid entrepreneur, several thousand "good" communists, a willing U.S. State Department, the shortsighted Detroit auto industry, and improvident bankers, shake vigorously, and you've got *The Yugo: The Rise and Fall of the Worst Car in History*. Brilliantly re-creating the amazing confluence of events that produced the Yugo, Yugoslav expert Jason Vuic uproariously tells the story of the car that became an international joke: The American CEO who happens upon a Yugo right when his company needs to find a new import or go under. A State Department eager to aid Yugoslavia's nonaligned communist government. Zastava Automobiles, which overhauls its factory to produce an American-ready Yugo in six months. And a hole left by Detroit in the cheap subcompact market that creates a race to the bottom that leaves the Yugo . . . at the bottom.

Analysing developments in digital technologies and institutional changes, this book provides an overview of the current frenetic state of transformation within the global automobile industry. An ongoing transition brought about by the relocation of marketing, design and production centres to emerging economies, and experimentation with new mobility systems such as electrical, autonomous vehicles, this process poses the question as to how

original equipment manufacturers (OEMs) and newcomers can remain competitive and ensure sustainability. With contributions from specialists in the automobile sector, this collection examines the shifts in power and geographical location occurring in the industry, and outlines the key role that public policy has in generating innovation in entrepreneurial states. Offering useful insights into the challenges facing emerging economies in their attempts to grow within the automobile industry, this book will provide valuable reading for those researching internationalization and emerging markets, business strategy and more specifically, the automotive industry.

*Autonomous Vehicle Technology* e-artnow sro

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and

implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.

The automotive industry appears close to substantial change engendered by "self-driving" technologies. This technology offers the possibility of significant benefits to social welfare—saving lives; reducing crashes, congestion, fuel consumption, and pollution; increasing mobility for the disabled; and ultimately improving land use. This report is intended as a guide for state and federal policymakers on the many issues that this technology raises.

**Mobility nodes as innovation hubs** National Academies Press  
 Canadians fell in love with the car at first glance. They were scared by it too, and by its potential. Canada was quick to become a car nation, as the automobile was enthusiastically adopted by Prairie grain farmers, the new modern woman, travellers to the north, and rough-and-tumble adventurers looking for a thrill by traversing the immense length of the country. The automobile was the symbol of the modern Canada of the twentieth century, and the final victory of technology over landscape. Canadians were building cars from the beginning. Independent firms and branches of the big American manufacturers vied for the lucrative Canadian market. Automaking has been an integral part of Canada's economy since the car's introduction. For more than a century, Canadians have lived with this automobile revolution, and all the consequences and permutations that it represents. Blending social, cultural and economic history, Dimitry Anastakis's engaging text tells the fascinating story of the car across Canada from earliest days, when cars and horses jockeyed for parking space, to the multilane freeways of the twenty-first century.

"The Child's Play VW Polo" explains, step by step, with a picture for each, how to do the service of your VW Polo. It is based on the certainty that everyone can do it, if clearly explicated and shown. Because it is very simple. Make sure your Polo is from 2001 to 2009 and has an engine 1.4 TDI 51, 55 or 59 kw. These are the engines covered by this VW Polo service manual. It contains an accurate list of the tools you need, a detailed procedure to do your service, but also to check and replace your front brakes (pads and discs). You will see an example of the service book you should keep up to date, and the scheduled maintenance for all the tasks that have to be done to keep your car in the best conditions. The main goal is to save money. For each maintenance, it will cost you from 35e to 50e maximum, while it costs more than 200e at your car dealer. You save at least 150e per service. More than money, you save time here ! We assure you than after the first learning, you will not need more than 30 minutes! Better than go to the car dealer and wait for two hours. The Child's Play Maintenance manuals have the goal to allow anyone to do its car service himself. We think that your mechanic charge far too much for what it is, and we want you to

avoid this useless expense. Each manual is specific to a single model (location of the parts are different, as the way to replace them)

Volume 2 of the two-volume set *Advanced direct injection combustion engine technologies and development* investigates diesel DI combustion engines, which despite their commercial success are facing ever more stringent emission legislation worldwide. Direct injection diesel engines are generally more efficient and cleaner than indirect injection engines and as fuel prices continue to rise DI engines are expected to gain in popularity for automotive applications. Two exclusive sections examine light-duty and heavy-duty diesel engines. Fuel injection systems and after treatment systems for DI diesel engines are discussed. The final section addresses exhaust emission control strategies, including combustion diagnostics and modelling, drawing on reputable diesel combustion system research and development. Investigates how HSDI and DI engines can meet ever more stringent emission legislation Examines technologies for both light-duty and heavy-duty diesel engines Discusses exhaust emission control strategies, combustion diagnostics and modelling

Exploring Geographies, Technology, and Institutional Challenges Lynn Michell

This is a book of many voyages. There is the meandering trail that leads to the right boat for crossing an ocean. There is the preparation stalled in a sweltering American boatyard while arguments about equipment and finance combine with the narrowing of the hurricane window. There is the crossing itself which starts with the wrong weather, broken boat parts, torn sails, serious leaks and a very seasick crew as Scarlet gets blown off course in unkind seas. Male and female monologues form the internal voyages. The skipper's thoughts range from the challenges of fitting a wind vane to almost losing an arm in a tangled genoa to the navigational system of the Puluwat Islanders. His wife describes diminishing supplies, the damp, bruises, blue eggs, jellyfish and her anxiety about the

deteriorating health of her son who, suffering from ME, should not have been persuaded to go with them. External and internal journeys criss-cross as Scarlet sails on across 3000 miles of ocean. She would have told a different story.

This book gathers papers presented at the International Conference "Vision Zero for Sustainable Road Safety in Baltic Sea Region", held on December 2018 at Vilnius Gediminas Technical University, in Vilnius, Lithuania. Taking as a starting point the multi-national road traffic safety program Vision Zero, originated in Sweden in 1995, the book aims at showing the current situation in different countries, in terms of achieved results and new challenges in both policy implementation and available technologies. A special emphasis is given to themes such as safety of smart vehicles, human factors, public education, and urban planning. The book offers an extensive source of

information and ideas concerning innovative transportation technologies and infrastructure. It addresses both researchers and decision-makers in this field.

An innovative text that aims to deepen students' knowledge of business ethics through a multidisciplinary approach grounded in moral philosophy, management principles, business history, and economics. The text aims to help students make ethical decisions, demonstrate integrity in the workplace, and advocate for moral business practices. It also features content on further trends and topics that will help students build a deeper understanding of business ethics: A section on Personal Integrity in the workplace, unpacks ethical dilemmas that face employees in the workplace including conflicts of interest, cheating, whistle blowing, and bribery. A section on Corporate Values and Responsibilities delves into ethical issues related to the financial industry, competition, safety, privacy, and intellectual property. A section on Global Capitalism examines the ethical issues related to culture, justice, the internet, and environmental issues around the world. All content is supported by 40 contemporary case studies that allow students to grapple with a wide range of moral issues and apply ethical frameworks to a variety of situations at real-world organizations, including GlaxoSmithKline (GSK) in China, Firestone in Liberia, and the Apple Encryption Controversy. The book is complemented by online resources for instructors and students, including: Test Bank, PowerPoint slides, an Instructor's Manual with extensive case notes, Exercises and Activities, Multimedia resources, Quizzes, Flashcards, and SAGE Journal Articles. Suitable reading for undergraduate students on Business Ethics

courses.
