"[The book] skilfully meshes together the written history of the city and its build environment with that which is less certain, less defined: the invisible and visible seams and ridges that hold the city together. ... We are presented with an array of books, documents, fictional accounts, personal memories, photographs (both original and archival), newspapers, pamphlets, obscure city council publications, surveys, plans, court proceedings and architectural objects. Using these materials, Kreutsfeldt and Malcomess ... take us on a visual and textual journey through the arrangements and specificities of Johannesburg over time and trace the cointours of the places and no-places that constitute the city as both concrete and imaginary."--Back cover.

The new edition of Major Incident Medical Management and Support is a vital component in the blended learning course from Advanced Life Support Group (ALSG), which aims to provide hospital staff at all levels with essential information on the preparation, management and support elements of dealing with casualties in a major incident. Split into five sections, each focuses on the elements requisite in preparing for, and responding, to a major incident. The first section discusses the epidemiology and incidences of major incidents and the structured approach to the hospital response. The second section contains the preparation required in planning for major incidents, including equipment and training. The third section covers the management of a major incident, concentrating on the clinical, nursing and management hierarchies. The fourth includes the various stages of support in a major incident, including declaring an incident and activating the plan, the reception, triage, definitive care and recovery phases of an incident. The final section focuses on special incidents which require additional consideration, including those involving hazardous chemicals, burns and children. Written in collaboration with the National Emergency Planning, Major Incident Medical Management and Support is an invaluable reference in the emergency department and beyond for staff needing to prepare for the rare, but inevitable, hospital major incidence response.

"a provocative new book" — The New York Times AI-centric organizations exhibit a new operating architecture, redefining how they create, capture, share, and deliver value. Now with a new preface that explores how the coronavirus crisis compelled organizations such as Massachusetts General Hospital, Verizon, and IKEA to transform themselves with remarkable speed, Marco Iansiti and Karim R. Lakhani show how reinventing the firm around data, analytics, and AI removes traditional constraints on scale, scope, and learning that have restricted business growth for hundreds of years. From Airbnb to Ant Financial, Microsoft to Amazon, research shows how AI-driven processes are vastly more scalable than traditional processes, allow massive scope increase, enabling companies to straddle industry boundaries, and create powerful opportunities for learning—to drive ever more accurate, complex, and sophisticated predictions. When traditional operating constraints are removed, strategy becomes a whole new game, one whose rules and likely outcomes this book will make clear. Iansiti and Lakhani: Present a framework for rethinking business and operating models Explain how "collisions" between AI-driven/digital and traditional/analog firms are reshaping competition, altering the structure of our economy, and forcing traditional companies to rearchitect their operating models Explain the opportunities and risks created by digital firms Describe the new challenges and responsibilities for the leaders of both digital and traditional firms Packed with examples—including many from the most powerful and innovative global, AI-driven competitors—and based on research in hundreds of firms across many sectors, this is your essential

guide for rethinking how your firm competes and operates in the era of AI.

In a modern recurring revenue business it is impossible to scale without treating sales as a science. In this first book of the Sales Blueprints series, Jacco Van Der Kooij and Fernando Pizarro break down the science of sales into its basic elements. Unlike any book before it, *The SaaS Sales Method* exposes the math that underpins each stage in revenue production, from marketing, to sales, to customer success, and infers how revenue leaders should structure their processes, organizations, and training in each. By linking all three functions, *The SaaS Sales Method* provides a framework for the modern revenue leader to understand and improve their entire system, shifting from what the authors call a superstar culture to a science culture in the process. While subsequent books in the series go into depth on the specifics of each revenue function and the skills needed to succeed in each, *The SaaS Sales Method* is the glue that holds the entire approach together.

An exploration of a new approach to text generation that interprets systemic grammar as a computational representation. Patten demonstrates that systemic grammar can be easily and automatically translated into current AI-knowledge representations and efficiently processed by the same knowledge-based techniques currently exploited by expert systems. Thus, the fundamental methodological problem of interfacing specialized computational representations with equally specialized linguistic representations can be resolved. The study provides a detailed discussion of the formal model proposed and of a substantial implementation including a relatively large systemic grammar. It represents a fundamental and productive contribution to the literature of text generation.

This book provides the first comprehensive academic study of what China's trade with, and investment in, African countries mean for the socio-economic well-being of the continent. Based on the African Tree of Organic Growth Framework developed in the book, Jonker and Robinson outline the factors necessary in realizing Africa's Renaissance vision and the impact that the Chinese might have on this process. Using the metaphor of the Baobab tree, the authors analyze the historical, cultural and economic contexts within African countries, the channels available to produce development and growth, and the fruits or social and economic well-being created by this integrated process. The book takes readers on a journey of numerous African examples and case studies, describing and analyzing the challenges and complexities of countries in their desire to achieve organic, cultural, scientific and economic renewal, and the improvement of the well-being of their

citizens. This book will be of great value to economists, people who wish to do business in Africa, China-watchers, those who are following the development and growth of Africa, and more.

Like many other new technologies which have since been seized and exploited by others, the industrial robot is a British invention. In 1957, a patent was produced by a British inventor, Cyril Walter Kenward, and later it became crucial to the future of robotics. For across the Atlantic two robot builders, Unimation and AMF, both infringed this patent and ultimately a cash settlement was made to Kenward. The owner of Unimation Inc. was Joseph Engelberger, an entrepreneur and avid reader of Isaac Asimov, the writer who helped to create the image of the benevolent robot. It is claimed that Engelberger's journey of fame down the road which led to him being hailed as the 'father of robotics' can be traced to the day that he met George C. Devol at a cocktail party. Devol was an inventor with an impressive list of patents to his name in the electronics field. One of Devol's patent applications referred to a Programmed Transfer Article. Devol's patent was issued in 1961 as US Patent 2,988,237, and this formed the basis of the Unimate robot which first saw the light of day in 1960. The first Unimate was sold to Ford Motor Company which used it to tend a die-casting machine. It is perhaps ironic that the first robot was used by a company which refused to recognise the machine as a robot, preferring instead to call it a Universal Transfer Device.
