The crucial part of clinical
examinations is for the
candidate to demonstrate

the ability to elicit
physical signs and make
sensible inferences, not to
diagnose every rarity.
This book aims to help
candidates during the
revision period leading to
postgraduate
examinations to develop a
systematic approach to
investigating a whole
range of common
ophthalmic problems.
Essentials Of

Ophthalmology: For
Medical School And
Beyond Wiley-Blackwell
There are nearly 24,000
ophthalmologists in the
United States, with 500
physicians newly entering
the ophthalmology field
each year and
approximately half of
those being women.
Although women now
represent approximately
half of all

ophthalmologists, gender disparities remain when it comes to certain subspecialties (e.g., surgical retina), leadership roles (e.g., department chairs), industry involvement (e.g., consultancy and advisory board positions), and even academic publications. There has been a recently heightened interest in female representation in this field which has manifested in several ways (e.g., conferences geared towards women in ophthalmology, non-peer-

reviewed publications about women in ophthalmology, and mentorship programs specifically for women). This book is the first of its kind in procuring and disseminating information—pertaining to both career and life—in an organized, concrete, and enduring way. *Women in Ophthalmology* is a comprehensive collection of chapters primarily written by women in the field of ophthalmology. The book aims to guide others through milestones and challenges women

may face during their careers, and shares sound insights into how to deal with unique issues both inside and outside the workplace. Topics that are widely applicable to all who work in ophthalmology are included, such as finding mentors, collaborating within industry, handling work-life balance, and seeking out leadership opportunities. Each chapter combines personal anecdotes with knowledge from leaders in the field which both men and women will find

highly valuable.

Eye Yield OUP Oxford Essentials of Ophthalmology: For Medical School and Beyond is a concise reference text for the medical undergraduates and residents, but the contents will also benefit family physicians who really are the first line of eye-care givers in the community. Highly illustrated with 200 colour clinical pictures and illustrations, the book is written by the multi-disciplinary faculty of the Department of

Ophthalmology, National University Health System, Singapore. The authors constantly asked themselves 'how much is too much' and deliberately attempted to weed out any 'excess' for the benefit of the target readers. The content is written in a point format with lucid language. Emphasis has been focused on information that constitutes essential ophthalmic 'core conditions and problems' of the current medical undergraduate

curriculum. Every section in the book has 'learning objectives' and a 'take home message' to facilitate quick learning. The book embraces a practical guide to the study of ocular diseases, basic methods of investigations and treatment where applicable. *Ophthalmology* Jaypee Brothers, Medical Publishers Pvt. Limited Fully revised and updated throughout, the fourth edition of the Oxford Handbook of Ophthalmology now

includes free access to the ophthalmic online media bank, a selection of high-quality clinical images and videos for a wide breadth of key ophthalmic diseases. Clear, concise, and practical, this handbook provides immediate access to the detailed clinical information you need, in casualty, clinic, theatre, and on the wards. The core of the book comprises a systematic synopsis of ophthalmic disease directed towards diagnosis, interim assessment, and ongoing

management. Assessment boxes for common clinical conditions and algorithms for important clinical presentations illustrate this practical approach. The information is easily accessible, presented in a clear format with areas of importance highlighted. Key sections for the trainee include: Clinical Skills, Aids to Diagnosis, Investigations and their Interpretation, Perioperative Care, Theatre Notes and Therapeutics. The wider practise of eye-care is supported by expanded

chapters on Refractive Ophthalmology, Vision in Context, Evidence Based Ophthalmology and Resources for Ophthalmologists. Now including newer treatments across a range of specialities such as SMILE, gene-therapy and retinal prostheses, as well as greater emphasis on the evidence underlying current clinical practice and guidelines, this handbook has never been more essential for all those working in eye-care. Whether you want to learn about patient-

reported outcomes, identify a surgical instrument, interpret a statistical test, or diagnose and treat ophthalmic emergencies, you will find it here. Whatever your role in caring for patients with eye disease: ophthalmologist, optometrist, orthoptist, ophthalmic nurse, or other health profession - discover for yourself why this handbook has become the 'go-to' resource for tens of thousands of eye-care professionals around the

world.

Clinical Anatomy of the
Eye has proved to be a
very popular textbook for
ophthalmologists and
optometrists in training all
over the world. The
objective of the book is to
provide the reader with
the basic knowledge of
anatomy necessary to
practice ophthalmology. It
is recognised that this
medical speciality
requires a detailed
knowledge of the eyeball
and the surrounding
structures. The

specialist's knowledge
should include not only
gross anatomic features
and their development,
but also the microscopic
anatomy of the eyeball
and the ocular
appendages. The nerve
and blood supply to the
orbit, the autonomic
innervation of the orbital
structures, the visual
pathway, and associated
visual reflexes should
receive great emphasis.
The practical application
of anatomic facts to
ophthalmology has been
emphasised throughout
this book in the form of

Clinical Notes in each
chapter. Clinical problems
requiring anatomic
knowledge for their
solution are presented at
the end of each chapter.
Illustrations are kept
simple and overview
drawings of the
distribution of the cranial
and autonomic nerves
have been included.
A Systematic Approach
Elsevier Health Sciences
With Contributions
From Chelvin Sng
(National University
Health System,
Singapore) & Laurence
Lim (Singapore National

Eye Centre, Singapore) Many new treatments and diagnostic procedures in ophthalmology have been refined or newly developed during the past four years, a new edition reflecting these changes is most timely. The scope and aim of the book will be consistent with the first edition, which provides a broad review of the specialist ophthalmology examinations for final year ophthalmology residents and trainees. The book deals primarily with key facts and topics

that are important from the examination perspective. Only information and facts that are considered relevant and critical to the exams are covered, with topics that may be of scientific interest, but are not commonly tested in exams, specifically left out. Time-challenged readers will also benefit from the knowledge acquired from various other sources or textbooks that are now organized and synthesized in this book. While not meant to

replace the standard textbooks, enough information is contained within the book to serve as the main revision text nearer the exams. The style and format of this book is intentionally didactic, with questions and short answers. The answer includes a “model opening statement,” followed first by a classification system to aid organization of facts, and then the core explanation in concise short notes. “Exam Tips” are inserted to provide an insight into techniques of

answering different types of questions and when appropriate, a “Clinical Approach” section is also included. In the new edition, topics such as new understanding of disease mechanisms (e.g., genetics of eye diseases), new investigations (e.g., OCT), and novel procedures and treatment (e.g., the use of antivascular endothelial growth factors, new refractive surgical techniques) are covered. This book will be a valuable guide to the final year ophthalmology

residents and trainees taking the specialist ophthalmology examinations, particularly for exams with a strong oral or viva component. Although primarily aimed at candidates attempting the British postgraduate exams (FRCS, FRANZCO, MRCS, MRCOphth and FRCOphth), it is also useful for other examination systems (e.g., the American Boards). Many junior residents, in fact, find the information handy during grand rounds.

Elsevier Health Sciences Ophthalmic Nursing provides an overview for those just setting out in a role within ophthalmic nursing. It includes basic and comprehensible anatomy and physiology – the foundations for understanding how the eye functions and why and how problems occur – and relates them to the care and needs of the patient. This accessible text includes evidence-based procedure

guidelines and the inclusion of reflective activities in most chapters allows readers to apply their knowledge to the realities of the care setting. Also covered are the most recent National Institute for Health and Care Excellence (NICE) guidelines for glaucoma and age-related macular degeneration. Since the publication of the fourth edition, there have been many advances in the care and management of the ophthalmic patient. The authors have updated the chapters accordingly

and included new colour images and diagrams. References, further reading and websites have also been updated to reflect current trends. A valuable resource for nurses in practice and training, this book continues to be the 'go-to' source for those caring for the ophthalmic patient. **Ophthalmology Oral Board Review** Oxford University Press

MCQs for FRCOphth Part 2 is a key resource for candidates preparing to sit the Royal College of Ophthalmologists examination. Written by experts in the field, it is carefully mapped to the RCOphth curriculum, providing comprehensive preparation for all aspects of this challenging exam. Written for the new FRCOphth format, it contains 360 questions organised into five sections to reflect the subdivisions of the exam. A mock examination of 90 questions enables

trainees to assess their level of knowledge, and practise the technique and approach needed for the examination. In addition to a small ratio of illustration based questions to reflect the real FRCOphth exam it also places an emphasis on areas that are not well covered in other materials, such as GMC and RCOphth guidelines. All answers are accompanied by detailed explanations and relevant further reading sources, providing candidates with high-quality self-

assessment. Offering a true test of the reader's ophthalmology knowledge, this is a must-buy for anyone preparing for the FRCOphth part 2 written exam.
