A comprehensive guide to
running randomized
impact evaluations of
social programs in
developing countries This
book provides a
comprehensive yet

accessible guide to
running randomized
impact evaluations of
social programs. Drawing
on the experience of
researchers at the Abdul
Latif Jameel Poverty
Action Lab, which has run
hundreds of such
evaluations in dozens of
countries throughout the
world, it offers practical
insights on how to use
this powerful technique,
especially in resource-

poor environments. This
step-by-step guide
explains why and when
randomized evaluations
are useful, in what
situations they should be
used, and how to
prioritize different
evaluation opportunities.
It shows how to design
and analyze studies that
answer important
questions while
respecting the constraints
of those working on and

benefiting from the program being evaluated. The book gives concrete tips on issues such as improving the quality of a study despite tight budget constraints, and demonstrates how the results of randomized impact evaluations can inform policy. With its self-contained modules, this one-of-a-kind guide is easy to navigate. It also includes invaluable references and a checklist of the common pitfalls to avoid. Provides the most up-to-date guide to running randomized

evaluations of social programs, especially in developing countries Offers practical tips on how to complete high-quality studies in even the most challenging environments Self-contained modules allow for easy reference and flexible teaching and learning Comprehensive yet nontechnical **ACLS, CPR, and PALS** John Wiley & Sons From personal loss to phantom diseases, *The Empathy Exams* is a bold and brilliant collection, winner of the Graywolf

Press Nonfiction Prize A Publishers Weekly Top Ten Essay Collection of Spring 2014 Beginning with her experience as a medical actor who was paid to act out symptoms for medical students to diagnose, Leslie Jamison's visceral and revealing essays ask essential questions about our basic understanding of others: How should we care about each other? How can we feel another's pain, especially when pain can be assumed, distorted, or performed? Is empathy a tool by which to test or

even grade each other? By confronting pain—real and imagined, her own and others'—Jamison uncovers a personal and cultural urgency to feel. She draws from her own experiences of illness and bodily injury to engage in an exploration that extends far beyond her life, spanning wide-ranging territory—from poverty tourism to phantom diseases, street violence to reality television, illness to incarceration—in its search for a kind of sight shaped by humility and

grace.

This book provides clinicians and trainees with the latest advances and procedures in the management of paediatric and neonatal emergencies. Divided into 16 sections, the text begins with discussion on the concept of intensive care, resuscitation, and diagnosis of an acutely sick child. The following chapters cover the

treatment of emergency scenarios in different systems of the body - respiratory, cardiovascular, nervous, endocrine, renal and gastrointestinal. The book concludes with sections on infectious diseases, oncology, accidents and poisoning, and neonatology. A chapter on drug dosages is also included. Topics are presented in a step by step, systematic approach, further enhanced by photographs, diagrams, flowcharts and tables to

assist learning. Key points

hydrological models, and machine learning approaches. These techniques are applied to address water resources and environmental monitoring, as well as planning and sustainable management of water resources. Further, the book discusses how to manage water resources at various local, regional, and international levels while incorporating environmental considerations. Finally, it delves into cutting-edge techniques based on open-source software and

R statistical programming, Google Earth Engine, and modeling in modern artificial intelligence techniques, with a particular emphasis on recent trends in datamining techniques and robust modeling in water resource crisis-related hazards. - Provides essential information on new methods for managing water resources to minimize the global water crisis - Illustrates a geospatial technology approach to datamining techniques, data analysis,

modeling, risk assessment and visualization, and management strategies in many elements of natural and societal hazards - Includes works that address the connection between water, climate change, and the environment

While there is an growing body of work on space and place in many disciplines, less attention has been paid to how a spatial approach illuminates the societies and cultures of the past. Here, leading experts explore the uses of space in two respects: how space can be applied to the study of history, and how space was used at specific times.

The MSME2014 is hosted by Advanced Information Science Research Center (AISRC) and is sponsored by DEStech Publications, Inc., University of East Asia, University of Mysore and Reitaku University. MSME2014 aims to provide an excellent international academic forum for sharing knowledge and results in theory, methodology and applications in the aspects of material science and material engineering. This

MSME2014 proceedings tends to collect the up-to-date, comprehensive and worldwide state-of-art knowledge on material science and material engineering, including material composites, ceramic, metal alloy material, polymer material, building materials, environmental friendly material, material performance, etc. All of accepted papers were subjected to strict peer-reviewing by 2-4 expert referees. The papers have been selected for this volume because of quality

and the relevance to the conference. We hope this book will not only provide the readers a broad overview of the latest research results, but also provide the readers a valuable summary and reference in these fields. Abundant Life and Basic Needs Jones & Bartlett Publishers

 Supplemental Instruction is a program designed to support students in their learning process. The program consists of advanced students supervising new students, where the purpose is to improve students' performance and reduce the risk of interruption of studies.
 Supplemental Instruction was established almost 50 years ago and is used today in universities around the world. This book examines different aspects of SI in

organizations and leadership, including surveys of Supplemental Instruction programs in Europe, how SI sessions should be organized, the degree to which SI improves retention rates and exam results, SI and learning leadership and leadership development, benefits of being a member of an SI team and employability, SI implementation in healthcare education and virtual students' attitudes towards SI online. The book is aimed at anyone who is concerned about

study quality in higher education. The contributors are researchers and lecturers at various universities from several countries. The book is part of a trilogy on Supplemental Instruction, where the themes for the other books are "Digital Technologies" and "Student Learning Processes". The editors of the trilogy are Abbas Strømmen-Bakhtiar, Roger Helde and Elisabeth Suzen, all three Associate Professors at Nord University, Norway.

This study guide has been produced to modernize, streamline, and simplify the original text whilst continuing to remain USCG compliant as well as now adhering to the new STCW requirements. The long since out-of-print original text, Marine Fire Prevention, Firefighting and Fire Safety, was published over forty years ago by the Department of

Transportation, Maritime Administration. Although the basic principles in marine firefighting have not changed, this study guide offers up-to-date information for a better understanding of the principles and methodologies involved. It also utilizes current-day examples, equipment, and techniques, breaking down the text into twelve easy-to-follow lessons: basic shipboard firefighting organization and safety, causes of fires and methods of prevention, theories of

fire, combating fire, extinguishing agents, extinguishing appliances, fire detection systems, fixed fire extinguishing systems, safety and firefighting equipment, and respirators and the self-contained breathing apparatus. These lessons will provide students the knowledge to not only successfully fight shipboard fires, but prevent such fires and in doing so, keep his/her ship and all that ply the seas onboard safe. *ACLS Review Made Incredibly Easy* Incredibly

device. In many cases, such as in implants and engineered tissues, the interaction of the cells with the biomaterial is one of the main determinants of the success of the system. Cell and Material Interface: Advances in Tissue Engineering, Biosensor, Implant, and Imaging Technologies explores this interaction and its control at length scales ranging from the nano to the macro. Featuring contributions from leading molecular biologists, chemists, and

material scientists, this authoritative reference: Presents practical examples of cell and material interface-based applications Reflects the interdisciplinary nature of bioengineering, covering topics such as biosensing, immunology, and controlled delivery Explains the role of the cell and material interface in the context of cardiac and skin tissue engineering, nanoparticles, natural polymers, and more Cell and Material Interface: Advances in Tissue

Engineering, Biosensor, Implant, and Imaging Technologies addresses concepts essential to biomaterial production methods and cell and material interactions. The book provides a solid starting point for elucidating and exploiting the different aspects of cellular interactions with materials for biomedical engineering.
