In *My Two Elaines*, author Marty Schreiber, former governor of Wisconsin, watches his beloved wife, Elaine, gradually transform from the woman he fell in love with in high school, and who diligently supported his political career, to the Elaine who knows she is declining and can't remember how to cook a meal, and finally to the Elaine who no longer recognizes Marty or their children. One part love story, one part practical advice, this compelling book includes several unique elements: Excerpts from Elaine's journal, recounting her thoughts, concerns, and frustrations as the disease progresses A recurring feature called "What I Wish I'd Known," which provides helpful takeaways for caregivers based on Marty's observations about what he wishes he'd known sooner and done differently A Q&A between Marty and neuropsychologist Dr. Michelle Braun, to equip caregivers with the right questions to ask and empower them to advocate for their loved ones and their own needs Beyond sincere, practical advice, *My Two Elaines* gives the reader permission to feel the full spectrum of emotions, including humor, even in the face of this relentless illness. And the book speaks to anyone touched by this disease--spouse, child, friend, or family member.

Creating Moments of Joy National Academies Press

The fraction of the population over age sixty-five in many developed countries is projected to rise, in some cases sharply, in coming decades. This has drawn growing interest to research on the health and economic circumstances of individuals as they age. Many individuals are retiring from paid work, yet they are living longer than ever. Their well-being is shaped by their past decisions such as their saving behavior, as well as by current and future economic conditions, health status, medical innovations, and a rapidly evolving landscape of policy incentives and supports. The contributions to *Insights in the Economics of Aging* uncover how financial, physical, and emotional well-being are integrally related. The authors consider the interactions between financial circumstances in later life, such as household savings and home ownership, physical circumstances such as health and disability, and emotional well-being, including happiness and mental health.

Aging, Disability, and Long-Term Residential Care transcript Verlag

Since the late 1970s when Congressman Claude Pepper held widely publicized hearings on the mistreatment of the elderly, policy makers and practitioners have sought ways to protect older Americans from physical, psychological, and financial abuse. Yet, during the last 20 years fewer than 50 articles have addressed the shameful problem that abusers want to conceal. *Elder Mistreatment in an Aging America* takes a giant step toward broadening our understanding of the mistreatment of the elderly and recommends specific research and funding strategies that can be used to deepen it. The book includes a discussion of the conceptual, methodological, and logistical issues needed to create a solid research base as well as the ethical concerns that must be considered when working with older subjects. It also looks at problems in determination of a report's reliability and the role of physicians, EMTs, and others who are among the first to recognize situations of mistreatment. *Elder Mistreatment in an Aging America* will be of interest to anyone concerned about the elderly and ways to intervene when abuse is suspected, including family members, caregivers, and advocates for the elderly. It will also be of interest to researchers, research sponsors, and policy makers who need to know how to advance our knowledge of this problem. *Long-Term Implications of an Older Population* UBC Press

Independent living with smart technologies *Smart Technology for Aging, Disability, and Independence: The State of the Science* brings together current research and technological developments from engineering, computer science, and rehabilitation sciences, detailing how its applications can promote continuing independence for older persons and those with disabilities. Leading experts from multiple disciplines worldwide have contributed to this volume, making it the definitive resource. The text begins with a thorough introduction that presents important concepts, defines key terms, and identifies demographic trends at work. Using detailed product descriptions, photographs and illustrations, and case studies, subsequent chapters discuss cutting-edge technologies, including: * Wearable systems * Human-computer interactions * Assisted vision and hearing * Smart wheelchairs * Handheld devices and smart phones * Visual sensors * Home automation * Assistive robotics * In-room monitoring systems * Telehealth After considering specific high-technology solutions, the text examines recent trends in other critical areas, such as basic assistive technologies, driving, transportation and community mobility, home modifications and design, and changing standards of elder care. Students and professionals in the rehabilitation sciences, healthcare providers, researchers in computer science and engineering, and non-expert readers will all appreciate this text's thorough coverage and clear

presentation of the state of the science.

A Story about Love and Dementia Harper Horizon

The United Nations Convention on the Rights of Persons with Disabilities (CRPD) recognized that people with disabilities should have the right to exercise their legal capacity and identified 'supported decision-making' as a means by which people with disabilities can be directly involved in decisions that impact their lives. Offering an overview of its emergence in the disability field and highlighting emerging research, theory, and practice from legal, psychology, education, and health fields, this volume provides a much-needed theoretical and evidence base for supported decision-making. Evidence and strengths-based frameworks for understanding disability, supports, and their roles in promoting supported decision-making are synthesized. The authors describe the application of a social-ecological approach to supported decision-making, and focus on implications for building systems of supports based on current environmental demands. This volume introduces and explains empirical research on critical elements of supported decision-making and the applications of supported decision-making that enhance outcomes, including self-determination and quality of life.

As the United States and the rest of the world face the unprecedented challenge of aging populations, this volume draws together for the first time state-of-the-art work from the emerging field of the demography of aging. The nine chapters, written by experts from a variety of disciplines, highlight data sources and research approaches, results, and proposed strategies on a topic with major policy implications for labor forces, economic well-being, health care, and the need for social and family supports. *Crossing Network Lines* National Academies Press

The United States is in the midst of a major demographic shift. In the coming decades, people aged 65 and over will make up an increasingly large percentage of the population: The ratio of people aged 65+ to people aged 20-64 will rise by 80%. This shift is happening for two reasons: people are living longer, and many couples are choosing to have fewer children and to have those children somewhat later in life. The resulting demographic shift will present the nation with economic challenges, both to absorb the costs and to leverage the benefits of an aging population. *Aging and the Macroeconomy: Long-Term Implications of an Older Population* presents the fundamental factors driving the aging of

the U.S. population, as well as its societal implications and likely long-term macroeconomic effects in a global context. The report finds that, while population aging does not pose an insurmountable challenge to the nation, it is imperative that sensible policies are implemented soon to allow companies and households to respond. It offers four practical approaches for preparing resources to support the future consumption of households and for adapting to the new economic landscape.

Aging and Disability Resource Center Report National Academies Press

Does a longer life mean a healthier life? The number of adults over 65 in the United States is growing, but many may not be aware that they are at greater risk from foodborne diseases and their nutritional needs change as they age. The IOM's Food Forum held a workshop October 29-30, 2009, to discuss food safety and nutrition concerns for older adults.

DIANE Publishing

Edie Weinstein is a ninth grader at Visitation High School in Saint Paul, Minnesota. Edie wrote Grandpa and Lucy for a Girl Scout Silver Award Project to help more people, particularly youth, learn about dementia. She wanted to make it more enjoyable for young people to talk to their relatives or other older friends who have dementia. Because dementia can make someone's world shrink, Edie hopes Grandpa and Lucy can help some families become closer and broaden their world.

Strengthening the Workforce to Support Community Living and Participation for Older Adults and Individuals with Disabilities National Academies Press

Being able to communicate is a cornerstone of healthy aging. People need to make themselves understood and to understand others to remain cognitively and socially engaged with families, friends, and other individuals. When they are unable to communicate, people with hearing impairments can become socially isolated, and social isolation can be an important driver of morbidity and mortality in older adults. Despite the critical importance of communication, many older adults have hearing loss that interferes with their social interactions and enjoyment of life. People may turn up the volume on their televisions or stereos, miss words in a conversation, go to fewer public places where it is difficult to hear, or worry about missing an alarm or notification. In other cases, hearing loss is much more severe, and people may retreat into a hard-to-reach shell. Yet fewer than one in seven older Americans with hearing loss use hearing aids, despite rapidly advancing technologies and innovative approaches to hearing health care. In addition, there may not be an adequate number of professionals trained to address the growing need for hearing health care for older adults. Further, Medicare does not cover routine hearing exams, hearing aids, or exams for fitting hearing aids, which can be prohibitively expensive for many older adults. Hearing Loss and Healthy Aging is the summary of a workshop convened by the Forum on Aging, Disability, and Independence in January 2014 on age-related hearing loss. Researchers, advocates, policy makers, entrepreneurs, regulators, and others discussed this pressing social and public health issue. This report examines the ways in which age-related hearing loss affects healthy aging, and how the spectrum of public and private stakeholders can work together to address hearing loss in older adults as a public health issue.

New Mexico ADRC Springer Publishing Company

Family caregiving affects millions of Americans every day, in all walks of life. At least 17.7 million individuals in the United States are caregivers of an older adult with a health or functional limitation. The nation's family caregivers provide the lion's share of long-term care for our older adult population. They are also central to older adults' access to and receipt of health care and community-based social services. Yet the need to recognize and support caregivers is among the least appreciated challenges facing the aging U.S. population. Families Caring for an Aging America examines the prevalence and nature of family caregiving of older adults and the available evidence on the effectiveness of programs, supports, and other interventions designed to support family caregivers. This report also assesses and recommends policies to address the needs of family caregivers and to minimize the barriers that they encounter in trying to meet the needs of older adults.

Paying special attention to the feelings, attitudes, and needs of people with disabilities—three chapters are written by authors who have a disability—Aging with a Disability gives students and clinicians a reliable and compassionate handbook for the treatment of this growing population.

Abuse, Neglect, and Exploitation in an Aging America Government Printing Office

Many different groups of people are subject to stereotypes. Positive stereotypes (e.g., "older and wiser") may provide a benefit to the relevant groups. However, negative stereotypes of aging and of disability continue to persist and, in some cases, remain socially acceptable. Research has shown that when exposed to negative images of aging, older persons demonstrate poor physical and cognitive performance and function, while those who are exposed to positive images of aging (or who have positive self-perceptions of aging) demonstrate better performance and function. Furthermore, an individual's expectations about and perceptions of aging can predict future health outcomes. To better understand how stereotypes affect older adults and individuals with disabilities, the National Academies of Sciences, Engineering, and Medicine, with support from AARP, convened a public workshop on October 10, 2017. This publication summarizes the presentations and discussions from the workshop.

Smart Technology for Aging, Disability, and Independence John Wiley & Sons

The second edition of this landmark textbook is distinguished by its pioneering approach to encompassing disability and aging policies under one umbrella, in response to the newly developed Administration on Aging and Disability. It addresses policy changes impacting health and disability services resulting from the Affordable Care Act (ACA) and other new legislation, and offers a pioneering approach to transforming policy into practice applications. New to the second edition is current census data and new legislative mandates from the ACA and other policy organizations impacting aging adults and/or disabled populations. Also included is new coverage on Social Media, Motivational Interviewing, Health Literacy, Underrepresented Groups, LGBT, and Rural Communities. Podcasts, available as downloads, present the messages of advocates, lobbyists, policy experts, and consumers who address various aspects of relevant policies and policy development. Unlike other texts, the book focuses on

triangulating skills, policies, and programs for graduate students in social work, public health, gerontology, and rehabilitation. It aims thus to enhance understanding of policy development through a critical analysis and review of policy framework, and promotes development of skills in shaping programs and implementing policy. The text lays out tools that facilitate policy and program development to include the media, coalition building, the use of an evidence base, and how each mandated policy addresses these programs and services. Chapters include learning objectives, case studies, review/discussion questions, and resources for additional information. An Instructors Manual, Test Bank, and PowerPoint slides facilitate the teaching process. New to the Second Edition: Addresses both disability and aging policies Includes updated census data Presents new legislation and mandates for the ACA, Veterans and the Military, Caregivers/Caregiver Support Act, Alzheimer Support, Health Lifestyles, Aging and Disability Resource Centers, Elder Justice Act, and Substance Use and Misuse Provides new coverage on Social Media, Motivational Interviewing, Health Literacy, Minorities, Incarcerated Individuals, Immigrants/Refugees, LGBT, and Rural Communities Offers podcasts of interviews with key consumers and policy experts Key Features: Lays out tools that facilitate policy and program development Examines major service areas for older adults Addresses philosophical, historical, and demographic challenges Enhances understanding of policy development through critical analysis Includes learning objectives, case studies, review questions, and instructor package

What the Clinician Needs to Know National Academies Press

What is the lived experience of previously healthy older adults as they face disability in late life, and how is disability assimilated in their identity? How do prevailing practices facilitate or limit options for elders living with new disabilities? To address these questions, Jeffrey Kahana and Eva Kahana uniquely synthesize disability and gerontological perspectives to explore both the unfolding challenges of aging and the practices and policies that can enhance the lives of older adults. Jeffrey S. Kahana is associate professor of history and codirector of the Center on Aging and Policy at Mount Saint Mary College. Eva Kahana is Distinguished University Professor and Pierce T. and Elizabeth D. Robson Professor of the Humanities at Case Western Reserve University, where she also is director of the Elderly Care Research Center.

This book offers many ways to create moments of joy. No matter what the environment or situation is, this book will be a positive tool on a daily basis. This book breaks down the learning process into five sections. Within those five sections are smaller steps. At the end of each step is a place to journal thoughts, ideas, solutions and treasures. With this journal, many moments of joy will be created.
