STEWART GAVIN

Ancient Migration in Global Perspective
Routledge

Ethics in the field of archaeological research, particularly arising in response to the recent trend of contract archaeology, becomes increasingly more complicated as a result of changing human relations surrounding historical evidence. The past is in fact no "dead and buried", and ethical questions about this living record demand an ongoing

discussion within the complex social and cultural domains that contend to interpret this record. Authored largely by members of the Society for American Archaeology Ethics Committee, this volume of original articles tackles issues such as the origin of archaeological ethics, responsibilities to the archaeological record (including discussion of documented and undocumented excavation) and responsibilities to diverse publics and between those in the field. This work should fuel a necessary debate among professionals and students of archaeology alike.

People of the Earth Univ of California Press

The question of ethics and their role in archaeology has stimulated one of the discipline's liveliest debates. In this collection of essays, first published in 2006, an international team of archaeologists, anthropologists and philosophers explore the ethical issues archaeology needs to address. Marrying the skills and expertise of practitioners from different disciplines, the collection produces interesting insights into many of the ethical dilemmas facing archaeology today. Topics discussed include relations with indigenous peoples; the professional

standards and responsibilities of researchers; the role of ethical codes; the notion of value in archaeology; concepts of stewardship and custodianship; the meaning and moral implications of 'heritage'; the question of who 'owns' the past or the interpretation of it; the trade in antiquities; the repatriation of skeletal material; and treatment of the dead. This important collection is essential reading for all those working in the field of archaeology, be they scholar or practitioner.

On Courage Penguin Books

The thrilling history of archaeological adventure, with tales of danger, debate, audacious explorers, and astonishing discoveries around the globe What is archaeology? The word may bring to mind images of golden pharaohs and lost civilizations, or Neanderthal skulls and Ice Age cave art. Archaeology is all of these, but also far more: the only science to encompass the entire span of human history—more than three million years! This Little History tells the riveting stories of some of the great archaeologists and their amazing discoveries around the globe: ancient Egyptian tombs, Mayan

ruins, the first colonial settlements at Jamestown, mysterious Stonehenge, the incredibly preserved Pompeii, and many, many more. In forty brief, exciting chapters, the book recounts archaeology's development from its eighteenth-century origins to its twenty-first-century technological advances, including remote sensing capabilities and satellite imagery techniques that have revolutionized the field. Shining light on the most intriguing events in the history of the field, this absolutely up-to-date book illuminates archaeology's controversies, discoveries, heroes and scoundrels, global sites, and newest methods for curious readers of every age.

Belief in the Past Cambridge University Press

Big History is a new field on a grand scale: it tells the story of the universe over time through a diverse range of disciplines that spans cosmology, physics, chemistry, astronomy, geology, evolutionary biology, anthropology, and archaeology, thereby reconciling traditional human history with environmental geography and natural history. Weaving the myriad threads of evidence-based human knowledge into a

master narrative that stretches from the beginning of the universe to the present, the Big History framework helps students make sense of their studies in all disciplines by illuminating the structures that underlie the universe and the connections among them. Teaching Big History is a powerful analytic and pedagogical resource, and serves as a comprehensive guide for teaching Big History, as well for sharing ideas about the subject and planning a curriculum around it. Readers are also given helpful advice about the administrative and organizational challenges of instituting a general education program constructed around Big History. The book includes teaching materials, examples, and detailed sample exercises. This book is also an engaging first-hand account of how a group of professors built an entire Big History general education curriculum for first-year students, demonstrating how this thoughtful integration of disciplines exemplifies liberal education at its best and illustrating how teaching and learning this incredible story can be transformative for professors and students alike.

Engaging with the Dead Univ of California

Press

Understand major developments of human prehistory *People of the Earth: An Introduction to World Prehistory 14/e*, provides an exciting journey through the 7-million-year-old panorama of humankind's past. This internationally renowned text provides the only truly global account of human prehistory from the earliest times through the earliest civilizations. Written in an accessible way for beginning students, *People of the Earth* shows how today's diverse humanity developed biologically and culturally over millions of years against a background of constant climatic change.

Discovering Physical Anthropology John Wiley & Sons

In its analysis of the archaeologies and histories of the northern fringe of Europe, this book provides a focus on animistic-shamanistic cosmologies and the associated human-environment relations from the Neolithic to modern times. The North has fascinated Europeans throughout history, as an enchanted world of natural and supernatural marvels: a land of light and dark, of northern lights and the midnight sun, of witches and

magic and of riches ranging from amber to oil. Northern lands conflate fantasies and realities. Rich archaeological, historical, ethnographic and folkloric materials combine in this book with cutting-edge theoretical perspectives drawn from relational ontologies and epistemologies, producing a fresh approach to the prehistory and history of a region that is pivotal to understanding Europe-wide processes, such as Neolithization and modernization. This book examines the mythical and actual northern worlds, with northern relational modes of perceiving and engaging with the world on the one hand and the 'place' of the North in European culture on the other. This book is an indispensable read for scholars of archaeology, anthropology, cultural studies and folklore in northern Europe, as well as researchers interested in how the North is intertwined with developments in the broader European and Eurasian world. It provides a deep-time understanding of globally topical issues and conflicting interests, as expressed by debates and controversies around Arctic resources, nature preservation and indigenous rights. The Making of the Human Mind Routledge

In Prehistory, the award-winning archaeologist and renowned scholar Colin Renfrew covers human existence before the advent of written records—which is to say, the overwhelming majority of our time here on earth. But Renfrew also opens up to discussion, and even debate, the term “prehistory” itself, giving an incisive, concise, and lively survey of the past, and how scholars and scientists labor to bring it to light. Renfrew begins by looking at prehistory as a discipline, particularly how developments of the past century and a half—advances in archaeology and geology; Darwin’s ideas of evolution; discoveries of artifacts and fossil evidence of our human ancestors; and even more enlightened museum and collection curatorship—have fueled continuous growth in our knowledge of prehistory. He details how breakthroughs such as radiocarbon dating and DNA analysis have helped us to define humankind’s past—how things have changed—much more clearly than was possible just a half century ago. Answers for why things have changed, however, continue to elude us, so Renfrew discusses some of the issues and challenges past

and present that confront the study of prehistory and its investigators. In the book's second part, Renfrew shifts the narrative focus, offering a summary of human prehistory from early hominids to the rise of literate civilization that is refreshingly free from conventional wisdom and grand "unified" theories. The author's own case studies encompass a vast geographical and chronological range—the Orkney Islands, the Balkans, the Indus Valley, Peru, Ireland, and China—and help to explain the formation and development of agriculture and centralized societies. He concludes with a fascinating chapter on early writing systems, "From Prehistory to History." In this invaluable, brief account of human development prior to the last four millennia, Colin Renfrew delivers a meticulously researched and passionately argued chronicle about our life on earth, and our ongoing quest to understand it. Human Biological Diversity W. W. Norton Here is a new, fourth edition of this authoritative introductory survey of world prehistory, spanning the past 3,000,000 years and written by a team of twenty-four expert authors. This edition has been

radically updated to be more thematic and accessible: chapters are connected by new key themes boxes (climate change, domestication, migration, social inequality and urbanism), which link global regions and encourage big-picture thinking. The text has been streamlined and the book's design completely revamped: it is now in full colour throughout, with more than 50% more colour images than the previous edition. There is increased coverage of the Americas, with a brand-new chapter, The Origins and Dispersal of the First Americans. Revisions take into account the latest sites and discoveries, including Homo naledi and the new LiDAR surveys of Angkor Wat. Each chapter begins with a newly designed, easier-to-use timeline, and features boxes on key sites, key discoveries, key controversies and, as above, key themes. All of the key methods boxes from the previous edition have been consolidated into the Introduction and now offer an up-front primer of archaeological methods and practices. Tables and maps are simplified and easier to use. *Death* Modern Library Human actions are often deeply

intertwined with religion and can be understood in a strictly religious context. Yet, many volumes and articles pertaining to discussions of religion in the archaeological past have focused primarily on the sociopolitical implications of such remains. The authors in this volume argue that while these interpretations certainly have a meaningful place in understanding the human past, they provide only part of the picture. Because strictly religious contexts have often been ignored, this has resulted in an incomplete assessment of religious behavior in the past. This volume considers exciting new directions for considering an archaeology of religion, offering examples from theory, tangible archaeological remains, and ethnography. **In Pursuit of the Past** Univ of California Press Drawing on many avenues of inquiry: archaeological excavations, surveys, laboratory work, highly specialized scientific investigations, and on both historical and ethnohistorical records; *Ancient Civilizations, 3/e* provides a comprehensive and straightforward account of the world's first civilizations and a brief summary of the way in which

they were discovered.
Northern Archaeology and Cosmology
 Oxford University Press
 Stretching across continents and centuries, *The Origins of War: Violence in Prehistory* provides a fascinating examination of executions, torture, ritual sacrifices, and other acts of violence committed in the prehistoric world. Written as an accessible guide to the nature of life in prehistory and to the underpinnings of human violence. Combines symbolic interpretations of archaeological remains with a medical understanding of violent acts. Written by an eminent prehistorian and a respected medical doctor.

Archaeology of Ancient Australia

University of California Press
 A journey through the evolution of Britain's prehistoric landscape, and an insight into the lives of its inhabitants, in fifteen scenes.

Utilitarianism Head of Zeus Ltd

The Human Past
Justice for People on the Move John Wiley & Sons
 Many consider Lewis Binford to be the single most influential figure in

archaeology in the last half-century. His contributions to the "New Archaeology" changed the course of the field as he argued for the development of a scientifically rigorous framework to guide the excavation and interpretation of the archaeological record. In this book, first published nearly two decades ago, Binford provided students and general readers with an introduction to his challenging and provocative ideas about understanding the human past. Now available again, this important component of Binford's intellectual legacy will convey the drama and intellectual excitement of contemporary archaeology to a new generation of archaeologists and others interested in the field. Throughout the book, Binford questions old ideas and proposes new theories based on his comparative archaeological and ethnographic research in North America, Europe, South Africa, and Australia. A new afterword by Binford surveys the direction archaeology has taken since the publication of this book and shares his hopes for the future of the discipline.

Ethical Issues in Archaeology Oxbow Books

An exciting and much anticipated new archaeology title written by titan Brian Fagan and journalist Nadia Durrani, *Bigger than History* introduces students to archaeology's contributions to many of today's important debates of interest to students. Each chapter focuses on one of today's important topics, such as gender equality, ethnicity and racism, climate change, and nationality and nationalism, showing how archaeology contributes to our understanding of the issues related to those topics. *Bigger than History* is affordable and concise enough to be used alongside a textbook, or on its own to engage and draw students into learning about archaeology.

Appropriating the Past Routledge

With a signature blend of evolutionary theory, population genetics, and behavioral ecology, *How Humans Evolved* teaches the science and history behind human evolution. Thoroughly updated with coverage of recent research and new discoveries, the Eighth Edition offers the most visual, dynamic, and effective learning tools in its field. The Eighth Edition also includes an expanded suite of animations that help students better

visualize and understand tricky concepts, as well as real-world videos and InQuizitive adaptive learning.

The Palace of Minos at Knossos

Routledge

An international and multidisciplinary team addresses significant ethical questions about the rights to access, manage and interpret the material remains of the past.

The Great Monuments and how They Were Built

Routledge

This entertaining Very Short Introduction reflects the enduring popularity of archaeology - a subject which appeals as a pastime, career, and academic discipline, encompasses the whole globe, and surveys 2.5 million years. From deserts to jungles, from deep caves to mountain tops, from pebble tools to satellite photographs, from excavation to abstract theory, archaeology interacts with nearly every other discipline in its attempts to reconstruct the past. In this new edition, Paul Bahn brings the text up to date, including information about new discoveries and interpretations in the field, and highlighting the impact of developments such as the potential use of

DNA and stable isotopes in teeth, as well the effect technology and science are having on archaeological exploration. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Excavations at the Anta da Lajinha

Routledge

Archaeoacoustics focuses on the role of sound in human behaviour, from earliest times up to the development of mechanical detection and recording devices in the 19th century. Recent calls for an 'archaeology of the senses' have served as a timely, even overdue reminder that the past which we experience - and which others have experienced before us - is multisensory, drawing not only upon the primary field of vision, but also on touch, smell and hearing. Megalithic tombs, Palaeolithic painted caves, Romanesque churches and prehistoric rock shelters all present specific sound qualities which

offer clues as to how they may have been designed and used. Voices resonate, external noises are subdued or eliminated, and a special aural dimension is accessed which complements the evidence of our other senses. The present volume, arising from a conference held at the McDonald Institute in 2003, brings together archaeologists and specialists in early musical instruments and acoustics in an attempt to unlock some of the meaning latent in the acoustics of such early structures and spaces. It will be essential reading for all who are concerned to seek a broader understanding of human sensory experience from prehistory up to historical times.

The Seventy Wonders of the Ancient World OUP Oxford

This book is an introduction to the archaeology of Australia from prehistoric times to the eighteenth century AD. It is the only up-to-date textbook on the subject and is designed for undergraduate courses, based on the author's considerable experience of teaching at the Australian National University. Lucidly written, it shows the diversity and colourfulness of the history of humanity in

the southern continent. The Archaeology of Ancient Australia demonstrates with an array of illustrations and clear descriptions of key archaeological evidence from

Australia a thorough evaluation of Australian prehistory. Readers are shown how this human past can be reconstructed from archaeological evidence, supplemented by information from

genetics, environmental sciences, anthropology, and history. The result is a challenging view about how varied human life in the ancient past has been.
