Constructing Image, Identity, and Place CRC Press

Ed: SUNY, Buffalo, Revised papers from two conferences, 1992 and 1993.

Perspectives in Vernacular Architecture Univ. of Tennessee Press

Sustainable design requires that design practitioners respond to a particular set of social, cultural and environmental conditions. 'Vernacular Architecture and Regional Design' defines a set of strategies for understanding the complexities of a regional setting. Through a series of international case studies, it examines how architects and designers have applied a variety of tactics to achieve culturally and environmentally appropriate design solutions. • Shows that architecture and design are inextricably linked to social and environmental processes, and are not just technical or aesthetic exercises. • Articulates a variety of methods to realise goals of socially responsible and environmentally responsive design. • Calls for a principled approach to design in

an effort to preserve fragile environments and forge sustainable best practice. 'Vernacular Architecture and Regional Design' will appeal to educators and professional practitioners in the fields of architecture, heritage conservation and urban design. Dr. Kingston Wm. Heath is Professor and Director of the Historic Preservation Program at the University of Oregon. Previously he was Professor of Architecture at the University of North Carolina, Charlotte where he taught seminars on vernacular architecture and regional design theory. He holds graduate degrees from the University of Chicago and Brown University. In addition to numerous articles in scholarly journals, he is the author of Patina of Place, and winner of the Abbott Lowell Cummings Award from The Vernacular Architecture Forum for excellence in a scholarly work. He has earned an international reputation in the field of vernacular architecture and has directed field schools in Italy and Croatia. [Vernacular Buildings](#) Routledge

« Invitation to Vernacular Architecture: A Guide to the Study of Ordinary Buildings and Landscapes is a manual for exploring and interpreting vernacular architecture, the common buildings of particular regions and time periods. Thomas Carter and Elizabeth Collins Cromley provide a

comprehensive introduction to the field. » « Rich with illustrations and written in a clear and jargon-free style, Invitation to Vernacular Architecture is an ideal text for courses in architecture, material culture studies, historic preservation, American studies, and history, and a useful guide for anyone interested in the built environment. »--

[The Making of the American Landscape](#) Routledge

Due to changing climates and demographics, questions of policy in the circumpolar north have focused attention on the very structures that people call home. Dwellings lie at the heart of many forms of negotiation. Based on years of in-depth research, this book presents and analyzes how the people of the circumpolar regions conceive, build, memorialize, and live in their dwellings. This book seeks to set a new standard for interdisciplinary work within the humanities and social sciences and includes anthropological work on vernacular architecture, environmental anthropology, household archaeology and demographics.

"Drawn from two conferences of the Vernacular Architecture Forum--one held in Charleston in

1994, and the other in Ottawa in 1995"--Back cover.

About the Hearth Univ. of Tennessee Press

Local communities have adapted for centuries to challenging surroundings, resulting from unforeseen natural hazards. Vernacular architecture often reveals very intelligent responses attuned to the environment. Therefore, the question that emerged was: how did local populations prepare their dwellings to face frequent earthquakes? It was to respond to this gap in knowledge, that the SEISMIC-V research project was instigated, and this interdisciplinary international publication was prepared. The research revealed the existence of a local seismic culture, in terms of reactive or preventive seismic resistant measures, able to survive, if properly maintained, in areas with frequent earthquakes. The fundamental contribution and aims of the publication were to enhance: -The disciplinary interest in vernacular architecture; -Its contribution to risk mitigation in responding to natural hazards; -To encourage academic and scientific research collaboration among different disciplines; -To contribute to the improvement of vernacular dwellings, which half of the world's population still inhabits nowadays. Fifty international researchers and experts presented case studies from Latin America, the Mediterranean, Eastern and Central Asia and the Himalayas region, with reference to 20 countries, i.e. Algeria, Bolivia, Bhutan, Chile, China, Egypt, El Salvador, Greece, Haiti, Italy, Japan, Mexico, Morocco, Nepal, Nicaragua, Peru, Romania, Taiwan, Turkey and a closer detailed analysis of Portugal. This publication brings together 43 contributions, with new perspectives on seismic retrofitting techniques and relevant data, addressing vernacular architecture; an amazing source of knowledge, and to this day, home to 4 billion people.

Housing and Dwelling Macmillan Reference USA

Vernacular architecture represents a great resource that has considerable potential to define principles for sustainable design and contemporary architecture. This publication is the result of an overall aim to produce a valuable tool for analysis regarding vernacular heritage through different assessments, in order to define principles to consider for sustainable development. This was possible through a comprehensive reflection on the principles established and the strategies to recognise in different world contexts. The present publication was the result of an in-depth approach by 46 authors from 12 countries, concerned with the analysis and critical assessment of vernacular heritage and its sustainable perspective. The book presents 8 chapters addressing operational definitions and synopses advances, regarding the main areas of vernacular heritage contribution to sustainable architecture. It also presents 15 chapters and 53 case studies of vernacular and contemporary approaches in all the 5 continents, regarding urban, architectural, technical and constructive strategies and solutions. **VERSUS, HERITAGE FOR TOMORROW: Vernacular Knowledge for Sustainable Architecture** is the result of a common effort undertaken by the partners ESG | Escola Superior Gallaecia, Portugal, as Project leader; CRATERRE | École Nationale Supérieure d'Architecture de Grenoble, France; DIDA | Università degli Studi di Firenze, Italy; DICAAR | Università degli Studi di Cagliari, Italy; and UPV | Universitat Politècnica de València, Spain. This is the final outcome of VerSus, an European project developed from 2012 to 2014, in the framework of the Culture 2007-2013 programme.

Perspectives in Vernacular Architecture Routledge

The study of vernacular architecture explores the characteristics of domestic buildings in particular regions or localities, and the many social and cultural factors that have contributed to their evolution. In this book, vernacular architecture specialist Paul Oliver brings together a wealth of information that spans over two decades, and the whole globe. Some previously unpublished papers, as well as those only available in hard to find conference proceedings, are brought together in one volume to form a fascinating reference for students and professional architects, as well as all those involved with planning housing schemes in their home countries and overseas.

Perspectives in Vernacular Architecture Palgrave Macmillan

The issues surrounding the function and meaning of vernacular architecture in the twenty-first century are complex and extensive. Taking a distinctively rigorous theoretical approach, this book considers these issues from a number of perspectives, broadening current debate to a wider multidisciplinary audience. These collected essays from the leading experts in the field focus on theory, education and practice in this essential sector of architecture, and help to formulate solutions to the environmental, disaster management and housing challenges facing the global community today.

Building Environments Berghahn Books

Based on thirty-five years of fieldwork, Glassie's Vernacular Architecture synthesizes a career of concern with traditional building. He articulates the key principles of architectural analysis, and then, centering his argument in the United States, but drawing comparative examples from many locations in Europe and Asia, he shows how architecture can be a prime resource for the one who would write a democratic and comprehensive history.

Vernacular Architecture Forum 2012 Holmes & Meier Publishers

Constancy permits the evolution of types and characteristics to be identified, even in widely spread locations. It helps trace the origins of structures, despite later modifications. And change allows one to trace the effects of difference in environment, fashion, cultural ideas and economic influences. Change and constancy operate together, although one may or other may dominate at a particular time and place. In *Vernacular Buildings* Allen Noble extends the global survey contained in his earlier highly successful *Traditional Buildings*, to cover vernacular buildings and dwellings around the world. In a truly comprehensive account, he ranges from the fazenda of the pioneer Brazilian settlers, the Masai dwellings of Tanzania and the gothic houses of Shanghai, to Virginia Hall and Parlor houses, the thatched dwellings of the Eifel region of Germany and the three-decker houses of New York. Acknowledging the value of archival research the author is also firmly convinced of the importance of field observation and the book is extensively illustrated with photographs from his own personal collection. With a comprehensive bibliography, and incorporating new material from cultural geographers, historians, folklorists and anthropologists, *Vernacular Buildings* is a unique survey that will be welcomed by specialists and enthusiasts alike.

Puerto Rican Houses in Sociohistorical Perspective Firenze University Press

The only compact yet comprehensive survey of environmental and cultural forces that have shaped the visual character and geographical diversity of the settled American landscape. The book examines the large-scale historical influences that have molded the varied human adaptation of the continent's physical topography to its needs over more than 500 years. It presents a synoptic view of myriad historical processes working together or in conflict, and illustrates them through their survival in or disappearance from the everyday landscapes of today.

Vernacular Architecture Newsletter Taylor & Francis Group

"Offers an intense scholarly experience in its comprehensiveness, its variety of voices and its formal organization... the editors took a risk, experimented and have delivered a much-needed resource that upends the status-quo." - *Architectural Histories*, journal of the European Architectural History Network "Architectural theory interweaves interdisciplinary understandings with different practices, intentions and ways of knowing. This handbook provides a lucid and comprehensive introduction to this challenging and shifting terrain, and will be of great interest to students, academics and practitioners alike." - Professor Iain Borden, UCL Bartlett School of Architecture "In this collection, architectural theory expands outward to interact with adjacent discourses such as sustainability, conservation, spatial practices, virtual technologies, and more. We have in *The Handbook of Architectural Theory* an example of the extreme generosity of architectural theory. It is a volume that designers and scholars of many stripes will welcome." - K. Michael Hays, Eliot Noyes Professor of Architectural Theory, Harvard University *The SAGE Handbook of Architectural Theory* documents and builds upon the most innovative developments in architectural theory over the last two decades. Bringing into dialogue a range of geographically, institutionally and historically competing positions, it examines and explores parallel debates in related fields. The book is divided into eight sections: Power/Difference/Embodiment Aesthetics/Pleasure/Excess Nation/World/Spectacle History/Memory/Tradition Design/Production/Practice Science/Technology/Virtuality Nature/Ecology/Sustainability City/Metropolis/Territory. Creating openings for future lines of inquiry and establishing the basis for new directions for education, research and practice, the book is organized around specific case studies to provide a critical, interpretive and speculative enquiry into the relevant debates in architectural theory.

Vernacular Architecture in America Univ. of Tennessee Press

Vernacular Architecture in the Pre-Columbian Americas reveals the dynamism of the ancient past, where social relations and long-term history were created posthole by posthole, brick by brick. This

collection shifts attention away from the elite and monumental architectural traditions of the region to instead investigate the creativity, subtlety and variability of common architecture and the people who built and dwelled in them. At the heart of this study of vernacular architecture is an emphasis on ordinary people and their built environments, and how these everyday spaces were pivotal in the making and meaning of social and cultural dynamics. Providing a deeper and more nuanced temporal perspective of common buildings in the Americas, the editors have deftly framed a study that highlights sociocultural diversity while at the same time facilitating broader comparative conversations around the theme of vernacular architecture. With diverse case studies covering a broad range of periods and regions, *Vernacular Architecture in the Pre-Columbian Americas* is an important addition to the growing body of scholarship on the indigenous architecture of the Americas and is a key contribution to our archaeological understandings of past built environments.

Perspectives in Vernacular Architecture Bloomsbury Publishing

A comprehensive examination of American vernacular buildings.

Invitation to Vernacular Architecture SAGE

Papers presented at various meetings of the forum.

Housing and Identity Univ. of Tennessee Press

From workers' cottages in Milwaukee's Polish community to Alaskan homesteads during the Great Depression, from early American retail stores to nineteenth-century prisons, different types of buildings reflect the diverse responses of people to their architectural needs. Through inquiry into such topics, the contributors to this volume examine a variety of building forms as they assess the current state of vernacular architecture studies. Because scholars in vernacular architecture have come to consider thematic questions rather than simply to look at types of structures, the essays chosen for this collection address issues of how people, power, and places intersect. They demonstrate not only the inextricable links between people and place but also show how power relationships are defined by spatial organization--and how this use of space has helped define the distinction between private and public. The essays examine a wide range of forms, from camp meetings to trolley cottages, to consider what buildings might reveal about their makers, users, and even interpreters. One article, for example, will give readers a new appreciation of balloon framing in Midwest farmhouses, refuting popular notions that it was a single individual's invention. Another considers servants' quarters in Apartheid-era South Africa to explore the relationship between black domestic workers and their white employers. Drawn from the Vernacular Architecture Forum conferences of 1996 and 1997, these thirteen essays make significant contributions to the study of design and building processes and the adaptation of architectural forms and spaces over time. They help redefine the scope of "vernacular" and provide new models for better understanding the built environment. The Editors: Sally McMurry is professor of history at Pennsylvania State University and author of *Families and Farmhouses in Nineteenth-Century America*. Annmarie Adams is associate professor of architecture at McGill University and author of *Architecture in the Family Way: Doctors, Houses, and Women, 1870-1900*.

Houses Transformed Bloomsbury Publishing

Vernacular architecture reflects local needs, traditions, and natural resources. This book includes drawings and pictures of American interior architecture ranging from 1870-1940.

The SAGE Handbook of Architectural Theory Springer

This book is the first work to describe the architecture of an entire complex society, from the inventive self-built dwellings of the poor to the elegant mansions of the rich. Abundantly illustrated with utilitarian black and white photos and good line-drawings. Annotation copyright by Book News, Inc., Portland, OR

Vernacular Architecture Univ. of Tennessee Press

Over the decades, there has been a world-wide transformation of so-called 'vernacular houses'. Based on ethnographic accounts from different regions, *Houses Transformed* investigates the changing practices of building houses in a transnational context. It explores the intersection of house biographies and social change, the politics of housing design, the social fabrication of aspirational houses, the domestication of concrete and the intersection of materiality and ontology as well as the rhetoric of the vernacular. The volume provides new anthropological pathways to understanding the dynamics of dwelling in the 21st century.
