This booklet provides a practical introduction to the practice of peer reviewing. Although it mainly focuses on paper reviewing for scientific events in computer science and business informatics, many of the principles, tips, tricks and examples can also be applied to journal reviewing and other scientific

domains. Some can also be used when reviewing proposals for research projects or grants. In addition, many aspects of the book will benefit authors of scientific papers, who will gain deeper insights into how papers are reviewed and hence what to pay attention to when writing their own papers. The book is divided into three chapters, the first of which presents a brief overview of why peer reviewing is considered to be an important quality control instrument for scientific papers. In turn, the second chapter elaborates on the

main principles a good reviewer should adhere to, including the most important aspects of personal attitude s/he should pay attention to when writing his/her review. Lastly, the third chapter features a series of (anonymized) real life examples of actual reviewing practice, thus illustrating practical tips and tricks regarding the most common “do’s” and “don’ts” of peer reviewing. The book offers a structured introduction and practical reference guide, including good and bad examples, for junior researchers in

computer science and business informatics in particular, as well as for anyone interested in peer reviewing in general."/p>

"Professional Nursing Concepts takes a patient-centered, traditional approach to nursing education and provides the foundation pre-licensure nursing students need in order to successfully transition into practice. Grounded in the Institute of Medicine's five core competencies for healthcare professionals, the current edition logically flows from the basics of the nursing profession and the dynamics of patient care into critical healthcare delivery discussions, ranging from health policy and political action to community health and leadership in nursing practice. Each chapter features discussion questions, critical thinking activities, and "stop and consider" sections that encourage students to reflect on important chapter topics in meaningful ways. Students can further interact with text content in "Working Backwards to Develop a Case", an in-text feature that allows students to creatively apply what they

have learned to their own unique case scenarios, bringing these foundational concepts to life. Above all, Professional Nursing Concepts reminds students that quality patient care is at the heart of the nursing profession. The fifth edition will continue to focus heavily on a patient-centered approach and will include new and updated features to engage students in their own learning. References will be updated as appropriate. The following changes are proposed for this fifth edition. Note that there are no new chapters planned but the text addresses some reviewer concerns, such as a need for more emphasis on community and population health perspectives and evidence-based practice"--

*Expanding Perspectives on Open Science: Communities, Cultures and Diversity in Concepts and Practices* Peer Review Reform and Renewal in Scientific Publishing

This book is an indispensable resource for students, researchers, and general readers who want to think more critically about the health news they see and hear. It outlines the research process and explores the many issues that can arise.

"People Who Drink Coffee Live Longer." "Students Learn Better When Listening to Classical Music." "Scientists Discover the Gene That Causes Obesity." We are constantly bombarded with reports of "groundbreaking" health findings that use attention-grabbing headlines and seem to be backed by credible science. Yet many of these studies and the news articles that discuss them fall prey to a variety of problems that can produce misleading and inaccurate results. Some of these may be easy to notice—like a research study on the benefits of red meat funded by the beef industry, or a study with a sample size of only 10 people—but others are much harder to spot. Skewed Studies: Exploring the Limits and Flaws of Health and Psychology Research examines the most pervasive problems plaguing health research and reporting today, using clear, accessible language and employing real-world examples to illustrate key concepts. Beyond simply outlining issues, it provides readers with the knowledge and skills to evaluate research studies and news reports for themselves, improving their health literacy and critical thinking skills. Brings together and thoroughly explores

the many ways in which health research and reporting can be flawed and problematic Improves readers' critical thinking skills and gives them practical tools to better evaluate the health information they come across Explains scientific and statistical concepts in clear, easy-to-understand language Includes a curated and annotated directory of resources for readers seeking additional information

. . . this Handbook is a good example . . . for those interested in giving a more articulated and solid flavour to their research. Andrea Colli, Business History The authors have taken a lot of pain in putting this Handbook together. As the name indicates, this is an excellent Handbook for researchers. Global Business Review The Handbook of Research on Family Business has collected and synthesized a broad variety of topics by

notable researchers who share a common dedication to family business research. This Handbook provides a comprehensive treatment that advances the frontiers of knowledge in family business, provoking valuable thoughts and discussion. The Handbook serves as both an authoritative and comprehensive reference work for researchers investigating family enterprises. A. Bakr Ibrahim, Concordia University, Montreal, Canada Although family business research is a young discipline it is both necessary and important. For the wellbeing and future development of our society the survival of prosperous and passionate family business entrepreneurs is indispensable. In order to help the families in business to better understand how to succeed with their enterprises we need qualified and updated research. This book is the answer! Hans-Jacob Bonnier, Bonnier Business Press Group, Sweden and 6th Generation Chairman of the Family Business Network International This Handbook is a unique compilation of the most important and the best recent family business research. The field has grown so rapidly that this effort will be a mark for the research to follow.

The Handbook of Research on Family Business will be the reference for scholars in family business for many years to come. It will also stimulate new ideas in research. John L. Ward, IMD, Switzerland and Northwestern University, US The Handbook of Research on Family Business provides a comprehensive first port of call for those wishing to survey progress in the theory and practice of family business research. In response to the extensive growth of family business as a topic of academic inquiry, the principal objective of the Handbook is to provide an authoritative and scholarly overview of current thinking in this multidisciplinary field. The contributors examine recent advances in the study of family business, which has undertaken significant strides in terms of theory building, empirical rigour, development of sophisticated survey instruments, systematic measurement of family business activity, use of alternative research methodologies and deployment of robust tools of analysis. A wide selection of empirical studies addressing the current family business research agenda are presented, and issues and topics explored include: validation of the protagonist role

that family firms play in social-economic spheres; operational and definitional issues surrounding what constitutes a family business; historical development of the field of family business; methodologies encompassing micro and macro perspectives; challenges to the orthodox microeconomic view of homo-economicus firms by highlighting the virtues of family influence and social capital. Comprising contributions from leading researchers credited with shaping the family business agenda, this Handbook will prove an invaluable reference tool for students, researchers, academics and practitioners involved with the family business arena. This book provides readers with a detailed orientation to healthcare simulation research, aiming to provide descriptive and illustrative accounts of healthcare simulation research (HSR). Written by leaders in the field, chapter discussions draw on the experiences of the editors and their international network of research colleagues. This seven-section practical guide begins with an introduction to the

field by relaying the key components of HSR. Sections two, three, four, and five then cover various topics relating to research literature, methods for data integration, and qualitative and quantitative approaches. Finally, the book closes with discussions of professional practices in HSR, as well as helpful tips and case studies. This book has established itself as the authoritative text on health sciences peer review. Contributions from the world's leading figures discuss the state of peer

review, question its role in the currently changing world of electronic journal publishing, and debate where it should go from here. Modern science is in unprecedented crisis. It is a crisis at many levels, continuous with larger crises of modern society. It is a crisis for the vocation of the scientist working within the modern institutionalised structures of science. It is a crisis for our capacity to use science benevolently to help solve larger material, organisational, and ultimately political problems of the modern era. And it is a crisis for philosophy, for the role of natural science to help inform our world-view. The Death of Science is an account of deeper causes of this malaise. It starts by taking up the reins of López Corredoira's (2013)

The Twilight of the Scientific Age, a recent critique that concludes with modern science on its death bed. It dissects key themes in detail, illustrated in the same frank style, drawing on personal examples. It starts with deep issues in the philosophy of science, recounting failed modern concepts of scientific progress, method and truth, going on to failures of peer review and gate-keeping as quality control systems, the domination of propaganda and marketing channels as the critical tools for professional success, and the major outcome for creative scientists themselves: the destruction of scientific creativity and exclusion of heterodox thinkers in this degraded environment. It connects the behavioural symptoms with a psycho-social analysis of the bureaucratic mode of organisation under which science, like all other modern vocations, is now subsumed. The account supports López Corredoira's appraisal, which sees a modern science industry driven by greed and ambition, repressing imagination and freedom, destructive of novelty and diversity of ideas, controlled by bureaucratic-academic power hierarchies. While science is irrevocably corrupted by

its modern mass-institutionalisation, the true spirit of science can only be sustained by individuals with a real vocation as scientists, or natural philosophers, who seek understanding and meaning and wisdom, rather than technocratic specialisation and careers. But it is increasingly impossible for scientists to withstand forces of professional conformity, and maintain their personal sense of value. A number of current controversies in some core sciences are also discussed, and it is argued that the greatest revelations of real science are yet to come. While Establishment Science has locked itself into dogmatic paradigms, the failures of present theories show that we are really on the cusp of major revolutions, spanning sciences of physics and cosmology, information and intelligence, biology and evolution, and mind and consciousness. If these are realised, they will profoundly change our understanding of the nature of the world and ourselves. But any such revolutions challenge a Science Establishment locked into the self-interest of its power-brokers, and are unlikely to occur except through independent scientists working outside the

institutional system. The book concludes with a brief discussion of the place of independent scientists.

Writing History in the Digital Age began as a “what-if” experiment by posing a question: How have Internet technologies influenced how historians think, teach, author, and publish? To illustrate their answer, the contributors agreed to share the stages of their book-in-progress as it was constructed on the public web. To facilitate this innovative volume, editors Jack Dougherty and Kristen Nawrotzki designed a born-digital, open-access, and open peer review process to capture commentary from appointed experts and general readers. A customized WordPress plug-in allowed audiences to add page- and paragraph-level comments to the manuscript, transforming it into a socially networked text. The initial six-week proposal phase generated over 250 comments, and the subsequent eight-week public review of full drafts drew 942 additional comments from readers across different parts of the globe. The finished product now presents 20 essays from a

wide array of notable scholars, each examining (and then breaking apart and reexamining) if and how digital and emergent technologies have changed the historical profession.

A unique and comprehensive text on the philosophy of model-based data analysis and strategy for the analysis of empirical data. The book introduces information theoretic approaches and focuses critical attention on a priori modeling and the selection of a good approximating model that best represents the inference supported by the data. It contains several new approaches to estimating model selection uncertainty and incorporating selection uncertainty into estimates of precision. An array of examples is given to illustrate various technical issues. The text has been written for biologists and statisticians using models for making inferences from empirical data.

This textbook explicitly links understanding of nursing research with evidence-based practice, and focuses on

how to read, critique, and utilize research reports. Organized around questions students have when reading reports—how the conclusions were reached, what types of patients the conclusions apply to, how the study was done, and why it was done that way—the text explains the steps of the research process to answer these questions. Chapters include clinical vignettes, highlighted key concepts, and out-of-class exercises. Appendices present a variety of research examples. This edition includes significant new material on evidence-based practice and more distinction between qualitative and quantitative research.

This report indicates that the oversight of research integrity in the UK is unsatisfactory. The Science and Technology Committee concludes that in order to allow others to repeat and build on experiments, researchers should aim for the gold standard of making their data fully disclosed and made publicly available. The report examines the current peer-review system as used in scientific publications and the related issues of research impact, data management, publication ethics and research integrity. The UK does not seem to have an oversight body for research integrity covering advice and assurance functions across all disciplines and the Committee recommends the creation of an external regulator. It also says all UK research

institutions should have a specific member of staff leading on research integrity. The report highlights concerns about the use of journal Impact Factor as a proxy measure for the quality of research or of individual articles. Innovative ways to improve current pre-publication peer-review practices are highlighted in the report, including the use of pre-print servers, open peer review, increased transparency and online repository-style journals. The growth of post-publication peer review and commentary also represents an enormous opportunity for experimentation with new media and social networking tools, which the Committee encourages. There should also be greater recognition of the work-sometimes considered to be a burden-carried out by reviewers, by both publishers and employers. In order to do this, publishers need to have in place systems for recording and acknowledging the contribution of those involved in peer review.

Continuing professional development (CPD) has become a defining issue in twenty-first century social work. There is widespread consensus in favour of CPD. But what is it? Are there discernible international trends? What are the barriers to participating in CPD? What do social workers think about and want from CPD? This book seeks to answer these questions. Based on a survey and interviews with social work practitioners, CPD in social work offers a unique insight into the possibilities and challenges of CPD and the issues it presents for newly

qualified and experienced social workers in practice. Combining the perspectives of social workers and their managers with international research, assures its global appeal. It offers possible directions for the future of post qualifying social work education, making it essential reading for practitioners, educators, managers and policy-makers.
