This is a user-friendly and practical guide for UK practitioners and those managing UK firms on the day-to-day legal issues that arise in the specialist field of partnerships and LLPs. The book is written by three authors: a leading partnership and LLP barrister with many years of litigation experience, a solicitor with specialist expertise in partnership and LLP structures and agreements, and a respected academic in the field. It provides clear and practical guidance on the main issues that arise time and again in UK partnerships and LLPs. While there are many important differences between traditional partnerships and LLPs, the practical issues that they face are often similar, and the book therefore tackle both areas. The focus is mainly on those areas that regularly cause difficulty in firms (be they traditional partnership or LLP). Subjects covered include: the legal nature and characteristics of partnerships and LLPs * factors influencing choice of legal entity * the essential elements of partnership and members' agreements * management structures including management boards and partnership councils * conduct of meetings * partnership/LLP property and profits and losses * accounts, taxation, and audit * partner and member retirements and expulsions * duties of partners and members * Equality Act implications * suspension and garden leave * personal liability issues * dissolution and winding-up * goodwill * disputes: mediation, arbitration, and court proceedings * mergers, acquisitions, and conversions.

An Oresteia Benjamin-Cummings Publishing Company Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand--and apply--key concepts.

New York Times bestselling author Hilary Mantel, two-time winner of the Man Booker Prize, is one of the world's most accomplished and acclaimed fiction writers. Giving Up the Ghost, is her dazzling memoir of a career blighted by physical pain in which her singular imagination supplied compensation for the life her body was denied. Selected by the New York Times as one of the 50 Best Memoirs of the Past 50 Years "The story of my own childhood is a complicated sentence that I am always trying to finish, to finish and put behind me." In postwar rural England, Hilary Mantel grew up convinced that the most extraordinary feats were within her grasp. But at nineteen, she became ill. Through years of misdiagnosis, she suffered patronizing psychiatric treatment and destructive surgery that left her without hope of children. Beset by pain and sadness, she decided to "write herself into being"—one novel after another. This wry and visceral memoir will certainly bring new converts to Mantel's dark genius.
