Flight International OECD Publishing

A computer program titled GENENG II which calculates steady-state design and off-design jet engine performance for two- or three-spool turbofans with one, two, or three nozzles is described. Included in the report are complete FORTRAN IV listings of the program with sample results for nine basic turbofan engines that can be calculated: (1) three-spool, three-stream engine; (2) two-spool, three-stream, boosted-fan engine; (3) two-spool, three-stream, supercharged-compressor engine; (4) three-spool, two-stream engine; (5) two-spool, two stream engine; (6) three-spool, three-stream, aft-fan engine; (7) two-spool, three-stream, aft-fan engine; (8) two-spool, two-stream, aft-fan engine; (9) three-spool, two-stream, aftfan engine. The simulation of other engines by using logical variables built into the program is also described. The computer program is available from the authors.

Routledge

This book documents Abraham Lincoln's two day excursion to Buffalo, Rochester, Syracuse, and other locations in western and central New York during his 12 day inaugural journey, using accounts from the period.

Fourth Division

Originally published in 1973 and based on papers published in The International Journal of Environmental Studies, this book discusses the impact of road vehicles on the environment. Particular stress is laid on the design of towns and vehicles, economic problems associated with

these, the responsibility of planners and the integration of transport planning and environmental planning at local, regional and national levels. Subsequent sections cover the science of accident research and legislation, particularly dealing with global pollution control. Many of the problems discussed remain as pressing today as when this book was first published.
