A Comprehensive
Treatise on Inorganic
and Theoretical
Chemistry Nelson
Thornes

Written primarily to meet the requirements of students at the undergraduate level, this book aims for a self-learning approach. The fundamentals of physical chemistry have been explained with illustrations, diagrams, tables, experimental techniques and solved problems.

**Practical Chemistry
for CSEC** East African
Publishers

Bring your science lessons to life with Scientifica. Providing just the right proportion of 'reading' versus 'doing', these engaging resources are differentiated to support and challenge pupils of varying

abilities.

Practical Chemistry is a unique practice book for CXC. It provides a wealth of revision exercises, and a guide to all the detailed experimental work covered in the CXC Chemistry

syllabus. Section A*
Practical guidance for
teachers and classes
perform

Solution and
Electrolysis Heinemann

This student book covers Levels 4-7 and is structured to match the sequence of the QCA Scheme of Work Units, and the National Framework for Science Guidelines. Each lesson can commence with a

really quick starter activity. The teacher support materials, of course provide hundreds more! "Scientifica" aims to provide just the right proportion of 'reading' versus 'doing'. There is enough text on each page for students to develop their literacy skills, but each lesson spread also contains an optional activity or two to access the real experience of Science. Ideas and Evidence articles are presented in each text in a more magazine style.

Solutions Nelson

Thornes

Covers all the material required by the CSEC syllabus at general proficiency level. Divided into four sections: Principles of Chemistry; Inorganic Chemistry; Organic Chemistry; Chemistry

in Industry.

Chemistry Matters

Heinemann

This laboratory based text centres itself around decision-making activities, where students apply their chemistry knowledge to realistic situations. This fifth edition includes more photographs, new drawings and new design.

UNLOCK THE SECRETS

OF CHEMISTRY with

THE PRINCETON

REVIEW. High School

Chemistry Unlocked

focuses on giving you a

wide range of key

lessons to help

increase your

understanding of

chemistry. With this

book, you'll move from

foundational concepts

to complicated, real-

world applications, building confidence as your skills improve. End-of-chapter drills will help test your comprehension of each facet of chemistry, from atoms to alpha radiation. Don't feel locked out! Everything You Need to Know About Chemistry. • Complex concepts explained in straightforward ways • Walk-throughs of sample problems for all topics • Clear goals and self-assessments to help you pinpoint areas for further review • Guided examples of how to solve problems for common subjects Practice Your Way to Excellence. • 165+ hands-on practice questions, seeded throughout the chapters and online • Complete answer explanations to boost

understanding • Bonus online questions similar to those you'll find on the AP Chemistry Exam and the SAT Chemistry Subject Test High School Chemistry Unlocked covers: • Building blocks of matter • Physical behavior of matter • Chemical bonding • Chemical reactions • Stoichiometry • Solutions • Acids and bases • Equilibrium • Organic chemistry • Radioactivity ... and more!

Teacher book

Heinemann Problem-solving is one of the most challenging aspects students encounter in general chemistry courses leading to frustration and failure. Consequently, many students become less motivated to take additional chemistry

courses after their first year. This book deals with calculations in general chemistry and its primary goal is to prevent frustration by providing students with innovative, intuitive, and systematic strategies to problem-solving in chemistry. The material addresses this issue by providing several sample problems with carefully explained step-by-step solutions for each concept. Key concepts, basic theories, and equations are provided and worked examples are selected to reflect possible ways problems could be presented to students.

Calculations for GCSE Chemistry Nelson Thornes

This series is designed to help students prepare effectively for their AQA Modular

science exams. The Year 10 and Year 11 textbooks are available in both higher and foundation editions for students of a wide range of abilities.

Journal of the Chemical Society

Princeton Review Comparative Inorganic Chemistry, Third Edition focuses on the developments in comparative inorganic chemistry, including properties of elements and the structure of their atoms, electronic configuration of atoms of elements, and the electronic theory of valency. The manuscript first offers information on the development of fundamental ideas in 19th century chemistry, as well as purification and identification of substances in the

laboratory; classical arguments for the existence of atoms and molecules; and electrolytes, ions, and electrons. The book also takes a look at the properties of elements and the structure of their atoms. The classification of elements in the 19th century, atomic nucleus, divisible atoms, nuclear reactions and fusions, and artificial radioactivity and nuclear transmutations are discussed. The book examines the electronic theory of valency and periodic classification, including basic assumptions of the electronic theory, hydration of ions, ionic bond and the formation of ions, and the development of the concept of valency. The manuscript also

ponders on bonding and the structures displayed by elements and their compounds; oxidation, reduction, and electrochemical processes; and the principles on the extraction of elements. The publication is a dependable source of information for chemists and readers interested in inorganic chemistry.

The Phase Rule New Age International
This series is focused on delivering custom materials which are designed and presented to meet the needs of enthusiastic and committed students. The resources are written at an average reading ability level, but with full and proper use of scientific terminology throughout. Ascent! has its own text-linked

The Chemistry of Lithium, Sodium, Potassium, Rubidium, Cesium and Francium

Macmillan

The Chemistry of Lithium, Sodium, Potassium, Rubidium, Cesium, and Francium studies the physical and chemical properties of the elements listed in the title, including their chemical compounds and reactions. This book first features lithium, including its characterization, metals, and compounds. This topic is followed by discussions on the remaining featured elements in this text, encompassing their discovery and history, occurrence and

distribution, and production. Then, this text presents the chemistry and chemical properties of the elements, specifically discussing topics such as the reactions of the metals, intermetallic compounds, hydrides, halides, cyanides and cyanates, and oxides and peroxides. The last two chapters examine biological activity and analytical chemistry of the elements. This book will be valuable to students and experts in the field of chemistry, as well as those in related fields.

A Text-book of inorganic chemistry S.

Chand Publishing

This fully revised edition is in line with the revised 2002 National Curriculum requirements and focuses on quantitative

chemistry in science.
Written to match all
major GCSE
specifications the text
covers all types of
numerical questions
from first principles.
For each topic, a
concise treatment of
the underlying theory
is followed by problems
grouped into three
sections of increasing
difficulty. Calculations
based on round
number molar masses
are included to enable
students to
concentrate on the
chemical basis of the
problems rather than

arithmetical
manipulation.
