Wadsworth Publishing Company  
The bestselling author and psychologist whose books have topped 240,000 copies in print now addresses the trait of

“high sensitivity” in children—and offers a breakthrough parenting guidebook for highly sensitive children and their caregivers. With the publication of *The Highly Sensitive Person*, Elaine Aron became the first person to identify the inborn trait of “high sensitivity” and to show how it affects the lives of those who possess it. Up to 20 percent of the population is born highly sensitive, and now in *The Highly Sensitive Child*, Aron shifts her focus to highly sensitive children, who share the same characteristics as highly sensitive adults and thus face unique challenges as they grow up. Rooted in Aron’s years of experience as a psychotherapist and her original research on child temperament, *The Highly Sensitive Child* shows how HSCs are born deeply reflective, sensitive to the subtle, and easily overwhelmed. These qualities can make for smart, conscientious, creative children, but with the wrong parenting or schooling, they can become unusually shy or timid, or begin acting out. Few parents and teachers understand where this behavior comes from—and as a result, HSCs are often mislabeled as overly inhibited, fearful, or “fussy,” or classified as “problem children” (and in some cases, misdiagnosed with disorders such as Attention Deficit Disorder). But raised with proper understanding and care, HSCs are no more prone to these problems than nonsensitive children and can grow up to be happy, healthy, well-adjusted adults. In this pioneering work, parents will find helpful self-tests and case studies to help them understand their HSC, along with thorough advice on:

- The challenges of raising an highly sensitive child
- The four keys to successfully parenting an HSC
- How to soothe highly sensitive infants
- Helping sensitive

children survive in a not-so-sensitive world • Making school and friendships enjoyable With chapters addressing the needs of specific age groups, from newborns through teens, *The Highly Sensitive Child* delivers warmhearted, timely information for parents, teachers, and the sensitive children in their lives. This book brings together contributions from leading figures in legal studies on analogy and related forms of reasoning in the law. Analogical reasoning—which relies on the concept of two different things being in some way like each other—is hugely important not just in the practice of law, but it is nonetheless strongly contested. This volume raises key questions like: What is the logical, argumentative, rhetorical, or just heuristic force of analogy in law? Is analogy really different from extensive interpretation, reasoning by precedent and appeal to paradigm?

This book traces the growing influence of ‘neuroparenting’ in British policy and politics. Neuroparenting advocates claim that all parents require training, especially in how their baby’s brain develops. Taking issue with the claims that ‘the first years last forever’ and that infancy is a ‘critical period’ during which parents must strive ever harder to ‘stimulate’ their baby’s brain just to achieve normal development, the author offers a trenchant and incisive case against the experts who claim to know best and in favour of the privacy, intimacy and autonomy which makes family life worth living. The book will be of interest to students and scholars of Sociology, Family and Intimate Life, Cultural Studies, Neuroscience, Social Policy and Child Development, as well as

individuals with an interest in family policy-making.

This is a major revision, updating, and expansion of the leading single-source volume on pediatric sedation outside of the operating room. Edited and written by an international roster of outstanding experts, it is the only book aimed at the broad range of specialists who deliver pediatric sedation in the non-OR setting. The Second Edition features a significant expansion of contributions from international leaders and individual new chapters on pre-sedation assessment; sedatives' short- and long-term effects on neurocognition; non-pharmacologic distractions; Michael Jackson's death and medical ethics; the role of simulation in safety and training; and palliative sedation in terminally ill children. The specialty-specific chapters continue to be geared toward all sedation providers, regardless of where they practice and patient safety is again emphasized.

Fundamental chapters provide in-depth reviews of topics which include, among others, physiology and pharmacology. The book presents the latest guidelines across the specialties, both in the United States and abroad and noteworthy, ongoing research endeavors. From reviews of the First Edition: "This meritorious volume is a splendid collection of materials from highly experienced authors...I will make extensive use of this reference as the academic medical center in which I work continues to build sedation practices and assess credentialing/privileging aspects for professionals of all fields." —Joseph R. Tobin, MD in *Journal of the American Medical Association*. "Brings together sedation practice from a broad range of specialties into one well-written pediatric text...I will certainly be using this book as a reference text in the future." — *Pediatric Anesthesia*. "The first [text] directed at all specialists that treat children who require some sedation...also recognizes the contributions to pediatric sedation of many international societies and governmental organizations...It should be on the shelves of all office-based practices." —*Journal of Neurosurgical Anesthesiology*. "With the ever-increasing opportunities to perform various investigations and therapeutic procedures, combined with increasing demands and expectations from children and their parents, the need and demand for safe and effective sedation of paediatric patients outside the operating room is increasing. Against this background, the second edition of 'Pediatric Sedation Outside the Operating Room' is a very timely addition to the anaesthesia literature."—*British Journal of Anesthesia* *The Athletic Skills Model* Macmillan

This book offers 150 12-lead ECGs and rhythm strips, each with a clinical case history and question. The full ECG is reproduced and a study of it with the case history should be enough to give an answer. On the back the case is examined, with a description of the main features of the ECG along with a clinical interpretation and a "what to do" section. The cases are graded in difficulty. The unique page size allows presentation of all 12-lead ECGs across a single page for clarity. Several of the cases incorporate chest X-rays and coronary angiograms illustrating the appearances that are associated with various cardiac conditions. All the cases are graded in difficulty and are cross-referenced to the new editions of *ECG Made Easy* and *ECG in Practice* for further information. For this Fourth Edition over 30 new ECGs have been included, mainly to provide clearer

examples, though the book deliberately retains some technically poor records to maintain a 'real-world' perspective.

The Athletic Skills Model offers an alternative to dominant talent development theories in the form of holistic broad-based movement education, focusing on health and wellbeing. It places the emphasis on 'physical intelligence' - including attributes such as agility, flexibility and stability - through adaptable and varied training programmes, creating a skilled athlete before introducing sport specialization. The book sets out the scientific underpinnings of the ASM before going on to offer practical guidance on the content of the programme, how to adapt and vary the programme, and how to apply the approach to different age groups and sports. The ASM's application in the youth development programme at AFC Ajax is explored in depth, before a future of talent development with an emphasis on athletic, rather than sport-specific, expertise is imagined. The Athletic Skills Model introduces an important and timely challenge to conventional wisdom in talent development and is a fascinating read for any upper-level

student or researcher interested in youth development, skill acquisition, motor learning or sports coaching, and any coaches wanting to refresh their approach to talent development.
