Thinking about Video Games John Wiley & Sons

This is the definitive behind-the-scenes account of Capcom's horror video game series Resident Evil – one of the most popular, innovative and widely influential franchises of all time. Industry expert Alex Aniel spent two years interviewing key former members of Capcom staff, allowing him to tell the inside story of how Resident Evil was envisioned as early as the late 1980s, how its unexpected and unprecedented success saved the

company from financial trouble, how the series struggled at the turn of the century and, eventually, how a new generation of creators was born after the release of Resident Evil 4. Itchy, Tasty narrates the development of each Resident Evil game released between 1996 and 2006, interspersed with fascinating commentary from the game creators themselves, offering unique insight into how the series became the world-conquering franchise it is today.

More than simply a paragon of Brazilian samba, *Dona (Lady) Ivone Lara's 1981 Sorriso Negro* (translated to *Black Smile*) is an album deeply embedded in the political and social tensions of its time. Released less than two years after the Brazilian military dictatorship approved the *Lei de Anistia* (the "Opening" that put Brazil on a path toward democratic governance), *Sorriso Negro* reflects the seminal shifts occurring within Brazilian society as former exiles reinforced notions of civil rights and feminist thought in a nation under the iron hand of a military dictatorship that had been in place since 1964. By looking at one of the most important samba albums ever recorded (and one that also happened to be authored by a black woman), *Mila Burns* explores the pathbreaking career of *Dona Ivone Lara*, tracing the ways in which she navigated the tense gender and race relations of the samba universe to

ultimately conquer the masculine world of samba composers. *33 1/3 Global*, a series related to but independent from *33 1/3*, takes the format of the original series of short, music-based books and brings the focus to music throughout the world. With initial volumes focusing on Japanese and Brazilian music, the series will also include volumes on the popular music of Australia/Oceania, Europe, Africa, the Middle East, and more.

This self-contained monograph presents a new stochastic approach to global optimization problems arising in a variety of disciplines including mathematics, operations research, engineering, and economics. The volume deals with constrained and unconstrained problems and puts a special emphasis on large scale problems. It also introduces a new unified concept for unconstrained, constrained, vector, and stochastic global optimization problems. All methods presented are illustrated by various examples. Practical numerical algorithms are given and analyzed in detail. The topics presented include the randomized curve of steepest descent, the randomized curve of dominated points, the semi-implicit Euler method, the penalty approach, and active set strategies. The optimal decoding of block codes in digital communications is worked out as a case study and shows the potential and high practical relevance of

this new approach. *Global Optimization: A Stochastic Approach* is an elegant account of a refined theory, suitable for researchers and graduate students interested in global optimization and its applications.

The available literature on freshwater fungi is limited. Over the subsequent years a considerable volume of scientific papers have appeared scattered throughout numerous journals. There is therefore no recent synthesis of the subject and this is the objective of the proposed book. Freshwater habitats are rich in fungi with some 3,000 described species, most of papers focussing on their identification, substrata they grow on and world distribution. However, these fungi play an important role in the freshwater ecosystem, and are primarily involved in the breakdown of leaf litter contributing food for detritus feeders. Our book will bring together a wide range of acclaimed mycologists to review recent

developments on the biology and ecology of freshwater fungi, particularly their molecular phylogeny, biodiversity, causative diseases of freshwater amphibians, fishes and invertebrate animals, decomposition of leaf litter, stream pollution and their potential role in bioremediation.

This book coins the term "Networked Public" to describe the active social actors in new media ecology. The author argues that, in today's network society, Networked Public Communication is different than, yet has similarities with, mass communication and interpersonal communication. As such it is the emergent paradigm for research. The book reviews the historical, technological and social context for the rising of Networked Public, analyzes its constituents and characteristics, and discusses the categories and features of social media in China. By analyzing abundant cases from recent years, the book provides answers to the key questions at micro, meso and macro-levels, including how information flows under regulation in the process of Networked Public Communication; what its

features and models are; what collective action strategies and "resistance culture" have been developed as a result of Internet regulate; the nature of power games among Networked Public, mass media, political forces and capital, and the links with the development of Chinese civil society.

An overview of the theory and application of kernel classification methods. Linear classifiers in kernel spaces have emerged as a major topic within the field of machine learning. The kernel technique takes the linear classifier—a limited, but well-established and comprehensively studied model—and extends its applicability to a wide range of nonlinear pattern-recognition tasks such as natural language processing, machine vision, and biological sequence analysis. This book provides the first comprehensive overview of both the theory and algorithms of kernel classifiers, including the most recent developments. It begins by describing the major algorithmic advances: kernel perceptron learning, kernel Fisher discriminants, support vector machines, relevance vector machines, Gaussian processes, and Bayes point machines. Then follows a detailed introduction to learning theory, including VC and PAC-Bayesian theory, data-dependent structural risk minimization,

and compression bounds. Throughout, the book emphasizes the interaction between theory and algorithms: how learning algorithms work and why. The book includes many examples, complete pseudo code of the algorithms presented, and an extensive source code library. Omics for Personalized Medicine Springer Science & Business Media
Sustainable infrastructure development is vital for Africa's prosperity. And now is the time to begin the transformation. This volume is the culmination of an unprecedented effort to document, analyze, and interpret the full extent of the challenge in developing Sub-Saharan Africa's infrastructure sectors. As a result, it represents the most comprehensive reference currently available on infrastructure in the region. The book covers the five main economic infrastructure sectors information and communication technology, irrigation, power, transport, and water and sanitation. 'Africa's Infrastructure: A Time for Transformation' reflects the collaboration of a wide array of African regional institutions and development partners under the auspices of the

Infrastructure Consortium for Africa. It presents the findings of the Africa Infrastructure Country Diagnostic (AICD), a project launched following a commitment in 2005 by the international community (after the G8 summit at Gleneagles, Scotland) to scale up financial support for infrastructure development in Africa. The lack of reliable information in this area made it difficult to evaluate the success of past interventions, prioritize current allocations, and provide benchmarks for measuring future progress, hence the need for the AICD. Africa's infrastructure sectors lag well behind those of the rest of the world, and the gap is widening. Some of the main policy-relevant findings highlighted in the book include the following: infrastructure in the region is exceptionally expensive, with tariffs being many times higher than those found elsewhere. Inadequate and expensive infrastructure is retarding growth by 2 percentage points each year. Solving the problem will cost over US\$90 billion per year, which is more than twice what is being spent in Africa today. However, money alone is not the answer. Prudent policies, wise management, and sound

maintenance can improve efficiency, thereby stretching the infrastructure dollar. There is the potential to recover an additional US\$17 billion a year from within the existing infrastructure resource envelope simply by improving efficiency. For example, improved revenue collection and utility management could generate

US\$3.3 billion per year. Regional power trade could reduce annual costs by US\$2 billion. And deregulating the trucking industry could reduce freight costs by one-half. So, raising more funds without also tackling inefficiencies would be like pouring water into a leaking bucket. Finally, the power sector and fragile states represent particular challenges. Even if

every efficiency in every infrastructure sector could be captured, a substantial funding gap of \$31 billion a year would remain. Nevertheless, the African people and economies cannot wait any longer. Now is the time to begin the transformation to sustainable development.
