### ALLIE GATES

*A Father and Son's Fatal Descent into the Ocean's Depths* Page Publishing Inc  
 Erik Petkovic's Lake Erie Technical Wreck Diving Guide is packed with tales of maritime disasters: sailing ships and steamers which foundered, succumbed to storms, collided or were engulfed in flames. There are ships which sank more than once, were involved in wars, slave escapes and catastrophic collisions, plus daring stories of deep salvage, valuable cargoes, submarines, experimental engineering and unidentified wrecks. The guide brings to life the rediscovered history of the ships, passengers and crews. Then there are the dives themselves. Some of the wrecks are remarkably intact for their age. Amongst the features which can be seen are wooden ships' wheels, standing masts, rudders, propellers, portholes, engines, boilers and steamship hogging arches. Each chapter describes the history, current condition, location, dimensions, hazards and highlights of an individual wreck. The author's original research, contributor photos and archive materials help bring these 19 enticing, challenging, rarely dived wrecks to life. 'Meticulously researched, nicely composed, beautifully illustrated. I wish I had written this book.' - Gary Gentile 'Any technical diver considering diving on any of these wrecks should first read this one-of-a-kind book!' - Joe Porter, Publisher, Wreck Diving Magazine  
*An American Immersion* McGraw Hill Professional  
 This second edition has been fully updated to reflect the latest research outcomes and contains chapter summaries to give a quick overview of each

chapter. A new section on nitrogen and helium kinetics has been added as well as a second appendix for calculating the acceleration in post-diving no-fly time associated with breathing surface oxygen.

*Real-World SCUBA Accidents and How to Avoid Them* Doubleday Canada

*An American Immersion* relives one woman's five-year journey in which she became the first woman to dive all 50 states. In this book you will find inspiration, discover hidden beauty in U.S. waters, and follow a path leading to unexpected outcomes.

*Staying Alive* Gary Gentile Productions

Deco for DiversDeco for DiversA Diver's Guide to Decompression Theory & Physiology

*Diving Pioneers and Innovators* Simon Pridmore

For all divers, beginner through instructor, search and rescue teams, training departments, health care providers, and family. Complex topics translated into understanding. Clear enough for all divers, substance for the advanced.

*Diver Down* CreateSpace

One diver, after a seemingly brief period below the surface, discovers that his gas supply has run perilously low. Another, paralyzed, bobs helplessly on the surface, and when a poorly trained divemaster attempts rescue, things go from bad to worse. Two other divers, fascinated by the bountiful undersea life of the Caribbean, fail to notice that a powerful current is sweeping them rapidly away from their unattended boat. These are just a few of the true stories you'll find in *Diver Down*, most of them involving diver error and resulting in serious injury or death. Each of these tales is

accompanied by an in-depth analysis of what went wrong and how you can recognize, avoid, and respond to similar underwater calamities. This unique survival guide explores the gamut of diving situations, including cave and wreck diving, deep-water dives, river and drift diving, decompression sickness, and much more. It shows you how to prevent tragic mishaps through: Inspection and maintenance of primary and secondary diving gear Learning and following established safety protocols Confirming the training and credentials of diving professionals Practicing emergency responses under real-world conditions

*Applying Risk Management to Advanced Scuba Diving* Springer Science & Business Media

This comprehensive guide is for both beginning and advanced divers. It tells how to find wrecks, details the equipment and techniques needed, explains safety concerns, and teaches how to recover artifacts and preserve them.

**The Diver's Decompression Textbook** Watersport Publishing

The 2019 DAN Annual Diving Report is a summary of recreational scuba diving and freediving incidents, injuries and fatalities that occurred in 2017 in the U.S. or Canada or that involved U.S. or Canadian residents. DAN's intention is for this annual publication to enhance awareness of dive injuries and give divers the insights they need to better avoid emergencies.

**Caverns Measureless to Man** Heinerth Productions Incorporated

Written for the diver with considerable scuba experience, a sense of adventure, and a yen to explore shipwreck sites, this work is amply illustrated and covers all the important aspects of the popular sport: approach, techniques, safety, wreck penetration, and decompression methods, as well as the details of artifact recovery and restoration. In addition, the author includes invaluable tips on underwater photography. Gary Gentile, a professional photographer and experienced shipwreck diver, has enlivened his text with anecdotes that may make even timid sports enthusiasts want to don diving gear.

Periscope Publishing Ltd.

'Technical Diving From The Bottom Up' is a guide to both 'would be' and experienced technical divers. Covering a range of topics, it is designed to guide the reader through the basics such as physiology and equipment configuration, before moving onto deep mixed gas decompression diving and the use of rebreathers.

**Sidemount Diving** Dived Up Publications

Scuba divers are dying in caves, on wrecks, and in open water. These are not explorers pushing the boundaries of the known world, and they are not scientist seeking to prove new concepts and expand our understanding of the marine environment. These are ordinary divers. The man buying a coffee ahead of us in the morning; the woman we see walking her dog on our street. Brothers, sisters, aunts and uncles. Someone's wife or husband, mom or dad. Just regular people who are diving for the fun of it. These deaths are tragic, life-altering, devastating, a terrible waste. Worst of all, they are totally unnecessary, a sad mistake and often completely avoidable. In *Staying Alive*, Steve Lewis tells us there are very few diving accidents. Most of the heart-breaking events claiming the lives of scores of recreational divers are mistakes that result from established limits being ignored. Lewis revisits the survival guidelines originally proposed by the legendary Sheck Exley and shows us in eight straightforward steps how simple it is for sport and technical divers to avoid becoming a statistic.

**The Ultimate Challenge for Technical Divers** Simon and Schuster

This is the first book to span the depth between traditional sport diving editions and the complex medical/commercial texts. It provides a balanced view of the fascinations and hazards of deep diving through extensive factual development of its technical chapters.

**Mastering Rebreathers** Deco for DiversDeco for DiversA Diver's Guide to Decompression Theory & PhysiologyDeco for Divers provides a comprehensive overview of the principles underlying decompression theory and physiology. As well as a thorough examination of air decompression the book also addresses decompression using nitrox and mixed gases. It is completely up-to-date and includes information on the latest developments including deep stops and advanced bubble models. Deco for Divers bridges the gap between introductory books and specialist scientific journals and is suitable for new as well as highly experienced divers.Deep Into DecoThe Diver's Decompression TextbookDeep Into Deco is a comprehensive and well-written reference text covering various topics of decompression theory. It is straightforward, easy to read, and free from technical jargon while portraying the latest developments and controversial issues in technical diving. A must read for any diver seeking to understand decompression theory.Deep Into Deco Revised and UpdatedThe Diver's Decompression TextbookThis second edition has been fully updated to reflect the latest research outcomes and contains chapter summaries to give a quick overview of each chapter. A new section on nitrogen and helium kinetics has been added as well as a second appendix for calculating the acceleration in post-diving no-fly time associated with breathing surface oxygen.Technical DivingScuba PhysiologicalThink You Know All About Scuba Medicine? Think Again!

This is a story about a scuba diver who gets lost in a cave while diving. The trials and near-death experience endured and of the strange creature that came to his rescue or was there even a creature at all.

*The actual reference for recreational divers* Aqua Quest Publication

*Underwater Physiology* is a collection of papers that deals with the physiologically limiting effects of undersea, high pressure exposure ranging from fundamental biological reactions, through integration of physiological stresses, and to limits actually experienced in deep diving. Papers discuss oxygen, the mechanisms of toxicity, and the effects of oxygen on cells and systems such as its pathological and physiological influences in the neurosensory ocular tissue. Other papers discuss the physical effects of pressure and gases on cellular function, protein structure, and the possibility of alleviating symptoms through the administration of drugs. Tests in mice show that various gases exhibit qualitative and semi-quantitative differences in the characteristics of sickness, reactions to hypoxia, and the time before the onset of symptoms. A computer, programmed for nonlinear gas transfer and other variables, running in real time can compute directly from the breathing mixture and provide a real time solution to decompression sickness under various conditions. A combined therapeutic approach, recompression and dextran (an effective lipemic clearing agent)

should be capable of treating decompression sickness in humans. Other papers investigate the influence of inert gases and pressure on the central nervous system, as well as, situations in undersea and manned chamber operations. This collection can prove valuable for physiologists, biochemists, cellular biologists, and researchers involved in deep sea diving.

**Diving for Science and Technology** New World Publications Incorporated

Deep Into Deco is a comprehensive and well-written reference text covering various topics of decompression theory. It is straightforward, easy to read, and free from technical jargon while portraying the latest developments and controversial issues in technical diving. A must read for any diver seeking to understand decompression theory.

**Under Pressure** Neck and Back Pain Sports Medicine

Deco for Divers provides a comprehensive overview of the principles underlying decompression theory and physiology. As well as a thorough examination of air decompression the book also addresses decompression using nitrox and mixed gases. It is completely up-to-date and includes information on the latest developments including deep stops and advanced bubble models. Deco for Divers bridges the gap between introductory books and specialist scientific journals and is suitable for new as well as highly experienced divers.

**U.S. Navy Diving Manual** Cornell Maritime Press/Tidewater Publishers

Taking you to places no one has ever gone before, and blending memoir, adventure, and science, *Into the Planet* is a riveting account of one of the most dangerous yet exhilarating pursuits in the world: diving to the centre of the earth. "If I die, it will be in the most glorious place that nobody has ever seen." As one of the most celebrated cave divers in the world, Jill Heinerth has seen the planet in a way almost no one has. In a workday, she might swim below your home, through conduits in volcanoes or cracks in the world's largest iceberg. She's an explorer, a scientist's eyes and hands underwater—discovering new species and examining our finite freshwater reserves—and a filmmaker documenting the wonders of underwater life. Often the lone woman in a male-dominated domain, she tests the limits of human endurance at every tight turn, risking her life with each mission. To not only survive in this world but excel, Jill has had to learn how to master self-doubt like no other. With gripping storytelling that radiates intimacy, *Into the Planet* will transport you deep into the most exquisite, untouched corners of the earth, where fear must be reconciled and the innermost parts of the human condition are revealed.

**Deep Descent** National Geographic

A globally-unique book and a must for all divers who want to manage risks more effectively and have more fun in the process. Contains decades of research from high-risk domains translated into the world of technical and recreational diving.

**A Guide to Diving Wrecks** Academic Press

Rebreather Diving is one of the fastest growing segments of the underwater community - but, until now, easy-to-understand advice and guidance for novices has been hard to find. With this book, professional rebreather instructor Jill Heinerth helps divers navigate the complex, and sometimes intimidating world of rebreather diving. Providing clear, candid, and straightforward information based on her decades of exploration and teaching experience, Jill leads readers through the history, basics, and the high tech aspects of this remarkable, silent approach to diving. A valuable tool and a good read for beginners and accomplished scuba divers, *The Basics of Rebreather Diving* is generously illustrated with full color photographs, charts and drawings. Jill adds just the right amount of rich personal anecdotes, and provides an "insiders" viewpoint about the past, present and future of rebreather diving. Anyone currently, or considering diving a rebreather, will find in this book a wealth of knowledge, as well as an enjoyable addition to their diving library.

**Diving Deeper with Human Factors** Harper Collins

The book manages to combine humor, adventure, tragedy, triumph, heroism, and even some forays into the risqué... while chronicling the careers of 20 enduring personalities that helped make diving what it is today. Some of those interviewed are retired now, one (author Peter Benchley of *Jaws* fame) recently passed away, and many are still making history through their ongoing work. It's quite a group. Consider that the lineup includes actress and *Sea Hunt* star Zale Parry who also set the depth record for women divers back in 1954. Stan Waterman provides both the book's Foreword and a revealing insider look at his seven decades in diving. Living legend Bev Morgan pioneered the first dive training programs along with revolutionizing commercial diving equipment. His image in full hardhat dress also graces the book's cover. Morgan's candor and humor set the pace for the lively montage of dialogues to follow with Australian couple Ron and Valerie Taylor who rose to fame in the iconic shark documentary film *Blue Water, White Death*. They are joined by others from diving's first generation including filmmaker Al Giddings (*The Deep, Abyss, Titanic, etc.*), retail pioneer and cameraman Chuck Nicklin (*The Diving Locker*), manufacturers Dick Bonin (*Scubapro*) and Bob Hollis (*Oceanic*), photography masters Ernie Brooks and Paul Humann, as well as deep ocean explorer Dr. Bob Ballard who discovered the wrecks of the *Titanic*, *Bismarck*, and *PT-109*. Diving's second generation of innovators includes cave explorer Wes Skiles, filmmaker Mike deGruy, wreck explorer John Chatterton (of *Shadow Divers* fame), IMAX film producer Greg MacGillivray, and the dynamic husband/wife team of Howard and Michele Hall who seem to dominate the realm of documentary underwater films now (*Island of the Sharks, Coral Reef Adventure, Deep Sea 3D*). Last but not least, Stan Waterman talked Gilliam into sitting for an interview about his own amazing career and, typically, he shares a wicked sense of humor along with some biting perspective about what it was like to champion new technologies and daring approaches to diving business when the sport's ultra-conservatives wanted to suppress nitrox, liveboards, technical diving, diving computers, training methods, and honest journalism. Each chapter is a slice of human interest that lets the reader briefly pull back the curtain on the personal lives of diving's heroes and feel like they are part of the conversation. The full color book is lavishly illustrated with great photographs that capture each interviewee throughout their diving careers. It's a very personal journey and the reader will feel like they pulled up a chair and shared a cup of coffee around a table with each person. Gilliam enlisted help from other leading writers for some interviews he couldn't conduct himself and Fred Garth, Lina Hitchcock, Eric Hanauer, Douglas Seifert and Michel Gilbert & Danielle Alary all make significant contributions to round out the book. It's a massive volume, 8x11 inches in size, 496 pages, hard bound, and weighing in at a whopping eight pounds per copy.
