The world is not as mobile or as interconnected as we like to think. As Harm de Blij argues in *The Power of Place*, in crucial ways--from the uneven distribution of natural resources to the unequal availability of opportunity-

-geography continues to hold billions of people in its grip. We are all born into natural and cultural environments that shape what we become, individually and collectively. From our "mother tongue" to our father's faith, from medical risks to natural hazards, where we start our journey has much to do with our destiny. Hundreds of millions of farmers in the river basins of Asia and Africa, and tens of millions of shepherds in isolated mountain valleys from the Andes to Kashmir, all live their lives much as their distant ancestors did, remote from the forces of globalization. Incorporating a series of persuasive maps, De Blij describes the tremendously varied environments across the planet and shows how migrations between them are comparatively rare. De Blij also looks at the ways we are redefining place so as to make its power even more potent than it has been, with troubling implications.

Geography: Realms, Regions, and Concepts 16E with Student Study Guide 15E Set Wiley  
Since its first appearance, Geography: Realms, Regions, and Concepts has consistently broken new ground in the interpretation and teaching of world regional geography. For more than four decades, REGIONS, as it has come to be called, has explained the contemporary world's geographic realms and their natural environments and human dimensions. The authors look at the ways people have organized their living space, adapted to changing social as well as environmental circumstances, and continue to confront forces largely beyond their control ranging from globalization to climate change. This book was the first to introduce an approach to Geography that meshes theoretical

concepts with regional realities. The evolving regional content of the chapters in REGIONS 18th edition reflects the dynamic nature of the world's geography; the changing and growing number of concepts mirror the progress of the discipline; and the ongoing introduction of new digital features reflects the instructional possibilities of new technologies.
