**New Scientist** Routledge

"A valuable guide book that... leads us, step by step, into communication with our deeper subconscious nature and nudges open the gate to our inner self." - Dale Graff 'Frank Joseph boldly and eloquently connects us to a larger world.' - Thomas Ropp We have all experienced inexplicable coincidences - such as thinking about an old friend before the phone rings and it happens to be that old friend. The Power of Coincidence reveals that such events are not random, but crucial pieces in the puzzle of our lives. Author Frank Joseph shows us how to recognize instances of meaningful coincidence (or 'synchronicity' as it was called by Jung) and the guidance they offer in finding our true path in life. Includes instructions on how to keep a personal journal of meaningful coincidences, revealing the significant patterns and cycles within your life.

**The Power of Coincidence** House of Stratus

Victoria Lamartine is on trial for the murder of her lover. There are only five suspects including Lamartine. But evidence that doesn't fit the police theory of the crime has been ignored, whilst all of the damning evidence is presented in isolation. There also appears to be links to gold smuggling. There is also a final twist and conclusion.

[From re-inventing capitalism to re-politicising the present](#) The Roots of Coincidence

Across the globe, environmental questions feature more and more in today's social and political agendas. In Western countries environmental campaigns target issues at home and abroad. They have a special urgency, which draws in an astonishing range of field campaigners, from young militants to rebel aristocrats. This book examines the roots of contemporary environmental consciousness and action in terms of both popular experience and tradition. The global reach of this book reflects the character of contemporary environmentalism. It examines a geographically and thematically diverse range of case studies, including: British environmental campaigners in the Brazilian rainforest; ecocriticism and literature; the environmental movement in Kazakhstan; and medieval church iconography. The common theme linking each chapter is that environmental consciousness and activism are shaped through people's life stories, and that their memories are shaped not only through individual experience but also through myth, tradition, and collective memory. Containing a wealth of empirical source material, Environmental Consciousness will be invaluable for sociologists and historians alike. It offers a cutting-edge illustration of how narrative and oral history can illuminate our understanding of an uncertain present. Stephen Hussey is a research associate at the School of Education at the University of Cambridge. His previous publications include Childhood in Question and his next publication will be a book for the wider market entitled Headline History. Paul Thompson is research professor in sociology and director of Qualidata at the University of Essex. He is also founder of the National Life Story Collection at the British Library National Sound Archive and founder-editor of Oral History. His previous publications include The Voice of the Past, The Edwardians, and The Work of William Morris.

*The Methodist Review* Springer Science & Business Media

A brand new edition of Arthur Koestler's gripping tale of arrest, imprisonment, and subsequent escape to London from Nazi-occupied France. Arthur Koestler is now an essential part of the English literary landscape both as political activist, controversialist and the author of *Darkness at Noon*. He stands beside George Orwell as one of the key writers of the twentieth century who embraced communism but would later turn against the party and denounce the tragic distortions and abuses that had betrayed the great vision.

[The Mysterious Role of Synchronicity in Shaping Our Lives](#) CRC Press

New Scientist magazine was launched in 1956 "for all those men and women who are interested in scientific discovery, and in its industrial, commercial and social consequences". The brand's mission is no different today - for its consumers, New Scientist reports, explores and interprets the results of human endeavour set in the context of society and culture.

**Garden & Home Builder** Club Lighthouse Publishing

The root is the organ that functions as the interface between the plant and the earth environment. Many human management practices involving crops, forests and natural vegetation also affect plant growth through the soil and roots. Understanding the morphology and function of roots from the cellular level to the level of the whole root system is required for both plant production and environmental protection. This book is at the forefront of plant root science (rhizology), catering to professional plant scientists and graduate students. It covers root development, stress physiology, ecology, and associations with microorganisms. The chapters are selected papers originally presented at the 6th Symposium of the International Society of Root Research, where plant biologists, ecologists, soil microbiologists, crop scientists, forestry scientists, and environmental scientists, among others, gathered to discuss current research results and to establish rhizology as a newly integrated research area.

[The Roots of a New Political Agenda](#) Routledge

Using political ecology and environmental history to explore the Green Revolution's emergence in the United States, Mexico, India and Britain, this book argues that the national security planning efforts of each nation were the most important forces promoting this revolution.

**Wheat, Genes, and the Cold War** Routledge

Five years of research carried out by the U.S. Department of Agriculture Forest Services' Northern Global Change Program, contributing to our understanding of the effects of multiple stresses on forest ecosystems over multiple spatial and temporal scales. At the physiological level, reports explore changes in growth and biomass, species composition, and wildlife habitat; at the landscape scale, the abundance distribution, and dynamics of species, populations, and communities are addressed. Chapters include studies of nutrient depletion, climate and atmospheric deposition, carbon and nitrogen cycling, insect and disease outbreaks, biotic feedbacks with the atmosphere, interacting effects of multiple stresses, and modeling the regional effects of global change. The book provides sound ecological information for policymakers and land-use planners as well as for researchers in ecology, forestry, atmospheric science, soil science and biogeochemistry.

The Green Movement in Germany is widely regarded as one of the most powerful expressions of popular opposition to government policies. A broad analysis of this powerful group is made in this book, showing that the origins of the movement relate to the general protests against industrialisation in the nineteenth century and also to more recent forms of protest. The author assesses the challenge posed by the Green Movement to established groups and organisations both in proposing alternative policies and in a long run of electoral successes. The Green Movement has evidently had a great impact on assumptions about defence, welfare and environmental policies. Data from major surveys on public attitudes and interviews with senior officials complete the picture of the practical and theoretical dimensions of the Green Movement.

**Supersenses** Springer Science & Business Media

This book addresses Lie groups, Lie algebras, and representation theory. The author restricts attention to matrix Lie groups and Lie algebras. This approach keeps the discussion concrete, allows the reader to get to the heart of the subject quickly, and covers all of the most interesting examples. From the reviews: "Sure to become a standard textbook for graduate students in mathematics and physics with little or no prior exposure to Lie theory." --L'Enseignement Mathematique

*Books and Bookmen* Cosimo, Inc.

Meg and her siblings have been sent to the English countryside for the summer to stay with elderly relatives. The children are looking forward to exploring the ancient mansion and perhaps discovering a musty old attic or two filled with treasure, but never in their wildest dreams did they expect to find themselves in the middle of a fairy war. When Rowan pledges to fight for the beautiful fairy queen, Meg is desperate to save her brother. But the Midsummer War is far more than a battle between mythic creatures: Everything that lives depends on it. How can Meg choose between family and the fate of the very land itself?

**A Challenge for Science, Understanding the Nature and Power of Consciousness** Transaction Publishers

Psychic Exploration, A Challenge for Science is a primer on psychic research, life's purpose, and the meaning of the universe. Originally published in 1974, this landmark anthology of nearly thirty chapters on every area of psychic research is finally available again. Edgar D. Mitchell, Apollo 14 astronaut and moonwalker, as well as a distinguished researcher of the study of human consciousness, brought together eminent scientists to write about issues once considered too controversial to discuss. This book includes fascinating chapters on the history of parapsychology, telepathy, hauntings, psychic phenomena, and consciousness, along with an extensive glossary and index. This timeless anthology continues to be appealing as a reference work for those curious about the history of parapsychology, fans of the world of psi, and readers interested in the meaning of the

universe. Contributors include: Willis W. Harman, Jean Houston, Stanley Krippner, Robert Masters, William G. Roll, Russell Targ, Charles T. Tart, Montague Ullman, and many more.

**Death Has Deep Roots** Springer Science & Business Media

Did you know that intentional dreaming has been used to solve life's problems? Embodiment: Creative Imagination in Medicine, Art and Travel sets out Robert Bosnak's practice of embodied imagination and demonstrates how he actually works with dreams and memories in groups. The book discusses various approaches to dreams, body and imagination, and combines this with a Jungian, neurobiological, relational and cultural analysis. The author's fascination with dreams, the most absolute form of embodied imagination, has caused him to travel all over the world. From his research he concludes that while dreaming everyone everywhere experiences dreams as embodied events in time and space while the dreamer is convinced of being awake; it is after waking into our specific cultural stories about dreaming that the widely differing attitudes towards dreams arise. By taking dreaming reality, not our waking interpretation of it, as the model for imagination, this book creates a paradigm shock and produces methods which can be applied in a wide variety of cultural settings. Through detailed case studies, professionals and students will find thorough discussions of: ways to flashback into dreams and memories while in a hypnagogic state of consciousness the practice of embodied imagination and its profound physical effects psyche as a self-organizing multiplicity of selves the nature of subjectivity the body as a theatre of sense memories the limitation of reason the process of dissociation the treatment of trauma This book discusses a variety of techniques which may be applied by health professionals to their patients and clients. It will also be of particular interest to Jungian and relational psychoanalysts, psychotherapists and clinical psychologists, as well as to artists, actors, directors, writers and other individuals who wish to explore the creative imagination.

*A "short" Yarn* Macmillan

Ever wonder what the odds are of being struck by lightning? Or winning the lottery? Or meeting someone from Timbuktu with the same middle name as you? BEYOND COINCIDENCE recounts and analyzes over 200 amazing stories of synchronicity, the likes of: Laura Buxton, age ten, releases a balloon from her back yard. It lands 140 miles away in the backyard of another Laura Buxton, also age ten. Two sisters in Alabama decide, independently, to visit the other. En route, their identical jeeps collide and both sisters are killed. A British cavalry officer was fighting in the last year of World War One when he was knocked off his horse by a flash of lightning. He was paralyzed from the waist down. The man moved to Vancouver, Canada where, six years later, while fishing in a river, lightning struck him again, paralyzing his right side. Two years later, he was sufficiently recovered to take walks in a local park when, in 1930, lightning sought him out again, this time permanently paralyzing him. He died soon after. Four years later, lightning destroyed his tomb.

**Books in Print** Vintage

Considered a quintessentially 'popular' author, John Buchan was a writer of fiction, journalism, philosophy and Scottish history. By examining his engagement with empire, psychoanalysis and propaganda, the contributors to this volume place Buchan at the centre of the debate between popular culture and the modernist elite.

**A Reference Guide** Funstory

Tarl Grudffyth, a warrior druid on the island of Hybyrnn, possesses a magical torque whose missing jewels will greatly enhance its power. On his search for these jewels, he's thrust into arcane as well as physical battle against the Uhtils, a vicious cabal of evil mages who aim to control Hibirnn. Tarl finds an unlikely ally in Golsun Molgun, an out of place merchant and scribe who has his own reasons for despising the Uhtils.

[Methodist Review](#) Routledge

The Game is Changing. It's been three years since Saff made the life-changing decision to embrace her Seeder nature and move to the Green Lands. She loves her job, her husband, her Seeder family, and everything about this enchanting new realm. Life couldn't be more perfect. Except for the disturbing new war tactics displayed by their enemies, the Ivies. Rachel's senior year in high school is anything but typical. Discovering her true identity as a Seeder means learning new abilities, hiding from Ivy assassins, and preparing to leave the human world behind. But something's not right with her powers, causing crippling self-doubt and leading her to make unlikely allies. Rachel's ready to join the rebellion, helping to put an end to centuries of unrest amongst the green folk. But people and promises are rarely as they seem in a war filled with secrets and misdirections. Far from being on the same page, Rachel and her new mentor, Saff, realize they can only take the needed leap of faith by trusting each other. The ultimate goal for them both is to stay alive, find out who they can trust, and just maybe, if they can manage that, they can stop a never-ending war.
