We live in a world where disaster incidents are on the rise. From natural disasters to war and conflict to infectious diseases, being prepared for such events takes tremendous preparation

and practice. Nurses are on the frontlines of disaster relief and care, but too few are trained in disaster prep, response, and recovery. Further, too few nurse faculty have personal, real-world experience in responding to natural and man-made disasters. So, where to start? How do nurse faculty members fit one more thing into a course or curriculum? And how do nurses stay on top of their game when it comes to disaster and emergency preparedness? Designing and

Implementing a Disaster Preparedness Curriculum: Readyng Nurses for the Worst presents a curriculum blueprint for nurse educators that provides readers with the best practices for implementation while avoiding pitfalls and mistakes. Disaster preparation experts Sharon Stanley and Thola Wolanski help ensure that nursing students are as prepared as possible to respond to disasters, whether in their own neighborhoods or around the world, by giving nurse

educators strategies and solutions for incorporating disaster preparedness into their curriculum.

From Hurricane Katrina and the south Asian tsunami to human-induced atrocities, terrorist attacks and the looming effects of climate change, the world is assailed by both natural

and unnatural hazards and disasters. These expose not only human vulnerability - particularly that of the poorest, who are least able to respond and adapt - but also the profound worldwide environmental injustices that result from the geographical distribution of risks, hazards and disasters. This collection of essays, from one of the most renowned and experienced experts, provides a timely assessment of these critical themes. Presenting the top

selections from Susan L. Cutter's thirty years of scholarship on hazards, vulnerability and environmental justice, the volume tackles issues such as nuclear and toxic hazards, risk assessment, communication and planning, and societal responses. Cutter maps out the terrain and draws out the salient themes with a fresh, powerful introduction written in the wake of her work in the aftermath of Katrina. This essential collection is ideal for professionals, researchers, academics

and students working on hazards, risk, disasters and environmental justice across a range of disciplines.

"In Case of Emergency argues that emergency media are profoundly cultural artifacts that shape the very definition

of "emergency" as an opposite of "normal." The normalizing ideologies produced and reinforced by emergency media result in unequal access to emergency services and discriminatory assumptions about who or what is a threat and who deserves care and protection. Thus, a primary function of emergency media is to produce feelings of safety in some while designating others as targets of surveillance and control"--
