 lines: Home; Sections. Videos; Section 3:  
 Slopes of Lines . In a coordinate plane, the  
 slope of a line is the ratio of the change  
 along the y-axis to change along the x-axis  
 between any two points on the line. The  
 slope  $m$  of a line containing two points  
 ...SECTION 3 - Chapter 3: Parallel and  
 Perpendicular linesChapter 3 :  
 Perpendicular and Parallel Lines Sailing.  
 Sailing. Historically, merchant and military  
 fleets used sailing vessels as the only  
 method of water transportation over great  
 distances. In fact, this practice continued  
 until the early 1900s when steamships  
 replaced sailing vessels as the preferred  
 method of water transportation.Chapter 3

 Perpendicular and Parallel Lines  
 Refraction. Refraction. When light hits  
 smooth, transparent matter such as glass  
 or water, some of it is reflected away from  
 the surface and some of it passes through  
 the surface and is refracted. The refracted  
 light changes direction due to the fact that  
 the speed of the light differs depending on  
 the substance through which it is  
 traveling.Chapter 3 : Perpendicular and
