"Wild Edibles: A Practical Guide to Foraging, with Easy Identification of 60 Edible Plants and 67 Recipes has taught me that my backyard is full of free food! Way to go, Sergei." —John Mackey, CEO of Whole Foods Market In this field guide to foraging wild edible plants, Sergei Boutenko (son of raw-food guru Victoria Boutenko) explores the health benefits of wild-harvested food, explains how to safely identify trailside weeds, herbs, fruits, and greens that grow worldwide, and shares his delicious, nutrient-dense recipes. Sergei Boutenko has been gathering wild plants since he was 13, when, early on in a 6-month hike from Mexico to Canada, he and his raw-food family ran out of provisions and turned to foraging for survival in the wild. Back in civilization, Boutenko was dismayed by the inferior quality of store-bought food and industrial agriculture, and began to regularly collect wild plants near his home and on his travels. Now, in *Wild Edibles*, he shares knowledge gleaned from years of live-food wildcrafting and thriving in harmony with nature. This practical guide to plant foraging gives hikers, backpackers, raw foodists, gardeners, chefs, foodies, DIYers, survivalists, and off-the-grid enthusiasts the tools to identify, harvest, and prepare wild edible plants. The book outlines basic rules for safe wild-food foraging and discusses poisonous plants, plant identification protocol, gathering etiquette, and conservation. Boutenko explores in detail the many rewards of eating wild flora: environmental protection, sustainability, saving money, economic self-sufficiency, and healthy living. He draws on thoroughly researched nutrition

science to make a compelling case for the health benefits of a diverse, local-food diet that includes wild greens. The majority of the 60 edible plants described in this field guide can be found worldwide, including common-growing trees. Over 300 color photos make plant identification easy and safe. A chapter containing 67 high-nutrient vegan recipes—including green smoothies, salads and salad dressings, spreads and crackers, main courses, juices, and sweets—provides inspiration to join Sergei on the trail to radiant health.

Auto Repair For Dummies, 2nd Edition (9781119543619) was previously published as *Auto Repair For Dummies, 2nd Edition* (9780764599026). While this version features a new Dummies cover and design, the content is the same as the prior release and should not be considered a new or updated product. The top-selling auto repair guide--400,000 copies sold--now extensively reorganized and updated Forty-eight percent of U.S. households perform at least some automobile maintenance on their own, with women now accounting for one third of this \$34 billion automotive do-it-yourself market. For new or would-be do-it-yourself mechanics, this illustrated how-to guide has long been a must and now it's even better. A complete reorganization now puts relevant

repair and maintenance information directly after each automotive system overview, making it much easier to find hands-on fix-it instructions. Author Deanna Sclar has updated systems and repair information throughout, eliminating discussions of carburetors and adding coverage of hybrid and alternative fuel vehicles. She's also revised schedules for tune-ups and oil changes, included driving tips that can save on maintenance and repair costs, and added new advice on troubleshooting problems and determining when to call in a professional mechanic. For anyone who wants to save money on car repairs and maintenance, this book is the place to start. Deanna Sclar (Long Beach, CA), an acclaimed auto repair expert and consumer advocate, has contributed to the Los Angeles Times and has been interviewed on the Today show, NBC Nightly News, and other television programs.

The book focuses on the effects of shock waves on vacancies and their clusters in fcc crystals. It is shown that high-speed

cooperative atomic displacements represent a powerful tool for the purposeful modification of defect structures in crystalline bodies. The results are important for radiation material science, nano-engineering, the study of shock wave effects and the ultrasonic treatment of materials. Keywords: Computer Modelling of Nanopores, Molecular Dynamics, Fcc Metals, Defect Structures in Crystals, Radiation Material Science, Nano-Engineering of Materials, Ultrasonic Treatment of Materials, Radiation Induced Defects, Vacancy Clusters, Shock Wave Effects, Radiation-Resistant Materials, Thermomechanical Processing, Energy Transfer Mechanism, Nanopore Nucleation, Nanopore Based Filters, Nanopore Based Detectors, Cooling Elements in Nano-Electronics.
