Escalating energy demand may be the most important issue facing the United States and the world today. There is little disagreement that research and development (R&D) is needed to develop new energy technologies for the future; however, there is less agreement over the specific research agenda to be pursued and how that agenda is funded. This book

addresses the social importance of new energy technologies, illustrates policy-relevant applications of evaluation techniques and proposes new perspectives for a US energy investment strategy. Through detailed examples related to solar, geothermal, and vehicle technologies, the authors outline the need for robust evaluation methods to document social returns to taxpayers' R&D investments. They argue that such evaluations are necessary for the public sector to make rational decisions about the allocation of its scarce resources. The evaluation methods considered involve

developing alternative technology and market pathways from which the benefits of government research can be measured. Researchers and graduate students, policy makers involved in energy technology, and energy R&D program managers will all find much of value in this important and timely book.

 Risk analysis is crucial in stochastic supply chain models. Over the past few years, the pace has quickened for research attempting to explore risk analysis issues in supply chain management problems, while the majority of recent papers focus on conceptual framework or computational numerical analysis. Pioneered by Nobel laureate Markowitz in the 1950s, the mean-risk (MR) formulation became a fundamental theory for risk management in finance. Despite the significance and popularity of MR-related approaches in finance, their applications in studying multi-echelon supply chain management problems have only been seriously explored in recent years. While the MR approach has already been shown to be useful in conducting risk analysis in stochastic supply chain models, there is no comprehensive reference source that provides the state-of-the-art findings on this important model for supply chain management. Thus it is significant to have a book that reviews and extends the MR related works for supply chain risk

analysis. This book is organized into five chapters. Chapter 1 introduces the topic, offers a timely review of various related areas, and explains why the MR approach is important for conducting supply chain risk analysis. Chapter 2 examines the single period inventory model with the mean-variance and mean-semi-deviation approaches. Extensive discussions on the efficient frontiers are also reported. Chapter 3 explores the infinite horizon multi-period inventory model with a mean-variance approach. Chapter 4 investigates the supply chain coordination problem with a versatile target sales rebate contract and a risk averse retailer possessing the mean-variance optimization objective. Chapter 5 concludes the book and discusses various promising future research directions and extensions. Every chapter can be taken as a self-contained article, and the notation within each chapter is consistently employed.

A practical guide to facial-feminization surgery for the male who is transitioning to female, this book focuses on a

pioneering form of cosmetic surgery that reshapes the male facial structure. Dramatic before and after photographs and detailed illustrations of each surgery show how reconstructive surgery recontours the brow and nose ridge, reduces the size of the jawbone and chin, and reshapes the trachea to eliminate the Adam's apple.

Cytologic diagnosis by examination of exfoliated cells in serous cavity fluids is one of the most challenging areas in clinical cytopathology. Almost 20% of the effusions examined are directly or indirectly related to the presence of malignant disease, with carcinoma of the lung as the most common underlying culprit. This volume published in the Essentials in Cytopathology book series will fulfill the need for an easy-to-use and

authoritative synopsis of site specific topics in cytopathology. These guide books fit into the lab coat pocket, ideal for portability and quick reference. Each volume is heavily illustrated with a full color art program, while the text follows a user-friendly outline format.

Non-destructive evaluation (NDE) methods have dominated most of the fields of applied research and technology over the last twenty years. These techniques provide information on the functional efficiency of materials and structures without causing any structural impact on the structure itself. Their use enables the monitoring of the structural integrity. *Psychoanalysis and Black Novels* Knopf

In this major reconsideration of Herman
 Melville's life and work, Michael Paul Rogin
 shows that Melville's novels are connected
 both to the important issues of his time
 and to the exploits of his patrician and
 politically prominent family—which, three
 generations after its Revolutionary War
 heroes, produced an alcoholic, a bankrupt,
 and a suicide. Rogin argues that a history
 of Melville's fiction, and of the society
 represented in it, is also a history of the

writer's family. He describes how that
 family first engaged Melville in and then
 isolated him from American political and
 social life. Melville's brother and father-in-
 law are shown to link Moby-Dick to the
 crisis over expansion and slavery. White-
 Jacket and Billy Budd, which concern
 shipboard conflicts between masters and
 seamen, are related to an execution at sea
 in which Melville's cousin played a decisive
 part. The figure of Melville's father haunts
 The Confidence Man, whose subject is the
 triumph of the marketplace and the
 absence of authority. A provocative study
 of one of our supreme literary artists.

This volume is a collection of cutting-edge
 research papers written by well-known
 researchers in the field of Romance
 phonetics and phonology. An important

goal of this book is to bridge the gap
 between traditional Romance linguistics □
 with its long and rich tradition in data
 collection, cross-language comparison,
 and phonetic variation □ and laboratory
 phonology work. The book is organized
 around three main themes: segmental
 processes, prosody, and the acquisition of
 segments and prosody. The various
 articles provide new empirical data on
 production, perception, sound change, first
 and second language learning, rhythm and
 intonation, presenting a state-of-the-art
 overview of research in laboratory
 phonology centred on Romance
 languages. The Romance data are used to
 test the predictions of a number of
 theoretical frameworks such as gestural
 phonology, exemplar models, generative
 phonology and optimality theory. The book
 will constitute a useful companion volume
 for phoneticians, phonologists and
 researchers investigating sound structure
 in Romance languages, and will serve to
 generate further interest in laboratory
 phonology.
