In this poetic memoir, which won the Pura Belpré Author Award, was a YALSA Nonfiction Finalist, and was named a Walter Dean Myers Award Honoree, acclaimed author Margarita Engle tells of growing up as a child of two cultures during the Cold War. Margarita is a girl from two worlds. Her heart lies in Cuba, her mother's tropical island country, a place so lush with vibrant life that it seems like a fairy tale kingdom. But most of the time she lives in Los Angeles, lonely in the noisy city and dreaming of the summers when she can take a plane through the enchanted air to her beloved island. Words and images are her constant companions, friendly and comforting when the children at school are not. Then a revolution breaks out in Cuba. Margarita fears for her far-away family. When the hostility between Cuba and the United States erupts at the Bay of Pigs Invasion, Margarita's worlds collide in the worst way possible. How can the two countries she loves hate each other so much? And will she ever get to visit her beautiful island again?

**Antoine of Oregon : A Story of the Oregon Trail** The author of this series of stories for children has endeavored simply to show why and how the descendants of the early colonists fought their way through the wilderness in search of new homes. The several narratives deal with the struggles of those adventurous people who forced their way westward, ever westward, whether in hope of gain or in answer to "the call of the wild," and who, in so doing, wrote their names with their blood across this country of ours from the Ohio to the Columbia. To excite in the hearts of the young people of this land a desire to know more regarding the building up of this great nation, and at the same time to entertain in such a manner as may stimulate to noble deeds, is the real aim of these stories. In them there is nothing of romance, but only a careful, truthful record of the part played by children in the great battles with those forces, human as well as natural, which, for so long a time, held a vast 4 portion of this broad land against the advance of home seekers. With the knowledge of what has been done by our own people in our own land, surely there is no reason why one should resort to fiction in order to depict scenes of heroism, daring, and sublime disregard of suffering in nearly every form.

Eighth-grade students who are placed into Algebra 1 but fail end-of-course exams may experience lowered grade point averages (GPAs) and loss of motivation for math or avoid taking advanced mathematics courses in high school. Middle-achieving students present challenges in terms of mathematics placement. Self-efficacy theory and locus of control theory suggest the noncognitive traits mathematics self-efficacy (MSE) and academic locus of control (ALOC) are associated with

mathematics achievement and could predict achievement in eighth-grade algebra. The purpose of this quantitative correlational study was to examine whether MSE, ALOC, and prior-year State of Texas Assessments of Academic Readiness (STAAR) mathematics score predict achievement in eighth-grade algebra among middle-achieving students in South Texas more accurately than prior-year STAAR mathematics scores alone. The sample included 111 eighth-grade algebra students in a large suburban school district in South Texas, whose scores on the previous year's STAAR mathematics exam fell between the 25th and 75th percentiles. MSE predicted meeting grade-level standards ( $R^2 = .229$ ), performance category ( $R^2 = .327$ ), and percent score on the NEISD Algebra 1 Benchmark exam ( $R^2 = .317$ ). ALOC was not associated with achievement on the NEISD Algebra 1 Benchmark exam. These results suggest that predictions of achievement in eighth-grade algebra for middle-achieving students were improved with the addition of measures of MSE, but not ALOC. Suggestions for future research include developing a mathematics locus of control instrument and broader studies exploring the relationship between MSE and achievement in eighth-grade Algebra 1.
