The Washington Manual(R) of Oncology, 4th Edition, is an ideal reference for oncologists, residents,

fellows, medical students, nurse practitioners, and physician assistants. *Clinical Oncology* Springer Science & Business Media TNM Classification of Malignant Tumours, 7th Edition provides the latest, internationally agreed-upon standards to describe and categorize cancer stages and progression. Published in affiliation with the International Union Against Cancer (UICC), this authoritative guide contains important updated organ-specific classifications that oncologists and other professionals who manage patients with cancer need to accurately classify tumours for staging, prognosis and treatment. The major

alterations addressed in the 7th Edition concern carcinomas of the oesophagus and the gastroesophageal junction, stomach, lung, appendix, biliary tract, skin, and prostate. In addition, there are several entirely new classifications: gastrointestinal carcinoids (neuroendocrine tumours) gastrointestinal stromal tumour upper aerodigestive mucosal melanoma Merkel cell carcinoma uterine sarcomas intrahepatic cholangiocarcinoma adrenal cortical carcinoma. A new approach has also been adopted to separate anatomical stage groupings from prognostic groupings in which other prognostic factors are added to T,

N, and M categories. These new prognostic groupings, as well as the traditional anatomical groupings, are presented for oesophageal and prostate carcinomas. Visit www.wileyanducc.com for more information about the International Journal of Cancer and our other UICC book titles *Clinical Oncology* McGraw Hill Professional. The outstanding success of the First Edition and the expansion of our knowledge about cancer over the 5 years since its publication have led to the decision to publish a Second Edition which has been fully revised, rewritten and enlarged by the addition of several sections. The

First Edition was translated into Italian, Japanese, Polish, and Serbo-Croat and it is expected that additional translations (French, German, Spanish, Portuguese, etc.) will make this Second Edition a truly international basic cancer Manual. The Revision Committee is convinced that all students and general physicians should know: (a) the important basic aspects of cancer; (b) some details of the most common cancers; and (c) a few important points about the less common cancers. An attempt has been made to strengthen Part I, General Aspects, which is considered to be the most important part of the Manual for the world's physicians.

However, the most common cancers in one part of the world are not necessarily the same in other parts and it is planned to work with local groups to produce adaptations and translations as seem appropriate. In particular, the UICC is anxious to work with local, national, and international committees to help improve the educational experience of students and general physicians in the geographic areas in question. Regional Conferences held by the UICC in Latin America, Asia and the Middle East have resulted in initial plans to accomplish this aim.
