 One teenager in a skirt. One teenager with a lighter. One moment that changes both of their lives forever. If it weren't for the 57 bus, Sasha and Richard never would have met. Both were high school students from Oakland, California, one of the most diverse

cities in the country, but they inhabited different worlds. Sasha, a white teen, lived in the middle-class foothills and attended a small private school. Richard, a black teen, lived in the crime-plagued flatlands and attended a large public one. Each day, their paths overlapped for a mere eight minutes. But one afternoon on the bus ride home from school, a single reckless act left Sasha severely burned, and Richard charged with two hate crimes and facing life imprisonment. The 57 Bus is Dashka Slater's true account of the case that garnered international attention and thrust both teenagers into the spotlight.

A firsthand exploration of the cost of boarding the bus of change to move America forward—written by one of the Civil Rights Movement's pioneers. At 18, Charles Person was the youngest of the original Freedom Riders, key figures in the U.S. Civil Rights Movement who left Washington, D.C. by bus in 1961, headed for New Orleans. This purposeful mix of black and white, male and female activists—including future Congressman John Lewis, Congress of Racial Equality Director James Farmer, Reverend Benjamin Elton Cox, journalist and pacifist James Peck, and CORE field secretary Genevieve Hughes—set out to discover whether America would abide by a Supreme Court decision that ruled segregation unconstitutional in bus depots, waiting areas, restaurants, and restrooms nationwide. Two buses proceeded through Virginia, North and South Carolina, to Georgia where they were greeted by Dr. Martin Luther King Jr., and finally to Alabama. There, the Freedom Riders found their answer: No. Southern states would continue to disregard federal law and use violence to enforce racial segregation. One bus was burned to a shell, its riders narrowly escaping; the second, which Charles rode, was set upon by a mob that beat several riders nearly to death. **Buses Are a Comin'** provides a front-row view of the struggle to belong in America, as Charles Person accompanies his colleagues off the bus, into the station, into the mob, and into history to help defeat segregation's violent grip on African American lives. It is also a challenge from a teenager of a previous era to the young people of today: become agents of transformation. Stand firm. Create a more just and moral country where students have a voice, youth can make a difference, and everyone belongs.

More than six million students in the U.S. receive special education services and that number is on the rise. Frequent changes in educational philosophy and special-education law have made it increasingly difficult for parents to establish an appropriate education plan for their children. This book looks at the many ways that parents can advocate for their children, including how to: Communicate with teachers Get homework done Become involved at school Ensure their children are well rested Start a school day on the right foot Advocacy comes in all forms, and sometimes it's as simple as helping people get to know their child and family in a positive way. This useful book will serve as an invaluable tool for parents looking to establish the best educational plan for their children.

Los Angeles transportation's epic scale--its iconic freeways, Union Station, Los Angeles International Airport and the giant ports of its shores--has obscured many offbeat transit stories of moxie and eccentricity. Triumphs such as the Vincent Thomas Bridge and Mac Barnes's Ground Link buspool have existed alongside such flops as the Santa Monica Freeway Diamond Lane and the Oxnard-Los Angeles Caltrain commuter rail. The City of Angels lacks a propeller-driven monorail and a freeway in the paved bed of the Los Angeles River, but not for a lack of public promoters. Where do our everyday words come from? The bagel you eat for breakfast, the bumf you have to wade through at the office, and the bus that takes you home again: we use these words without thinking about their origins or how their meanings have changed over time. Simon Horobin takes the reader on a journey through a typical day, showing how the words we use to describe routine activities - getting up, going to work, eating meals - have surprisingly fascinating histories.

Costa Rica by Bus, the insider's guide to budget travel, is the only travel guide that gives you complete, up-to-date information about Costa Rica's extensive, inexpensive public transportation system, a system that can take you almost anywhere in this remarkably beautiful country, border to border and coast to coast at minimal cost. The system consists of more than 550 routes served by more than 350 privately owned bus companies that work together to provide reliable service to cities, towns, and tourist destinations. The guide contains information about routes, schedules, fares, and where to find your bus. Moreover, it gives many travel tips based on the experiences of the author, a Costa Rica resident who rides the bus. It also includes information about international bus connections to and from Panama, Nicaragua, Honduras, San Salvador, Guatemala, and Mexico and domestic air connections via Sansa and Nature Air. And, to help you communicate with the Ticos as you travel, the guide contains a traveler's glossary.. This 200-page guide is concise, complete, and organized in a manner to help you quickly find the information you are looking for. It is the ideal companion to other guides, many of which assume that you will rent a car and drive, an alternative the author does not recommend.

In *Trains, Buses, People: An Opinionated Atlas of US Transit*, transportation expert Christof Spieler shows how cities can build successful transit. He profiles the 47 metropolitan areas in the US that have rail transit or BRT, using data, photos, and maps for easy comparison. The best and worst systems are ranked and Spieler offers analysis of how geography, politics, and history complicate transit planning. In this fun and accessible guide, he shows how the unique circumstances of every city have resulted in very different transit systems. In the end, *Trains, Buses, People* shows what is possible with the right tools to build good transit.

What mathematical modeling uncovers about life in the city *X and the City*, a book of diverse and accessible math-based topics, uses basic modeling to explore a wide range of entertaining questions about urban life. How do you estimate the number of dental or doctor's offices, gas stations, restaurants, or movie theaters in a city of a given size? How can mathematics be used to maximize traffic flow through tunnels? Can you predict whether a traffic light will stay green long enough for you to cross the intersection? And what is the likelihood that your city will be hit by an asteroid? Every math problem and equation in this book tells a story and examples are explained throughout in an informal and witty style. The level of mathematics ranges from precalculus through calculus to some differential equations, and any reader with knowledge of elementary calculus will be able to follow the materials with ease. There are also some more challenging problems sprinkled in for the more advanced reader. Filled with interesting and unusual observations about how cities work, *X and the City* shows how mathematics undergirds and plays an important part in the metropolitan landscape.
