With Respect to Sex is an intimate ethnography that offers a provocative account of sexual and social difference in India. The subjects of this study are hijras or the "third sex" of India—individuals who occupy a unique, liminal space between male and female, sacred and profane. Hijras are men

who sacrifice their genitalia to a goddess in return for the power to confer fertility on newlyweds and newborn children, a ritual role they are respected for, at the same time as they are stigmatized for their ambiguous sexuality. By focusing on the hijra community, Gayatri Reddy sheds new light on Indian society and the intricate negotiations of identity across various domains of everyday life. Further, by reframing hijra identity through the local economy of respect, this ethnography highlights the complex relationships among local and global, sexual and moral, economies. This book will be regarded as the definitive work on hijras, one that will be of enormous interest to anthropologists, students of South Asian culture, and specialists in the study of gender and sexuality.

*With Respect to Sex* Springer Nature

Rapid changes have taken place in the structure of the global economy, and this book looks at how South Asia can take advantage of these changes. The author argues that the developing global economy will be more complex than originally thought, that instead of a bipolar model with two countries, the US and China, at the centre, it will be multipolar with eight centres of economic activity, including India. The book goes on to suggest that in the context of such a model, there should be regional cooperation between India and its immediate neighbouring countries for South Asia to advance as an economic region. It argues that South Asia will need to look at its history, and that changes in attitudes, particularly in India and Pakistan, are necessary. The possible benefits to the region, in terms of increases in the rates of economic growth if the regional approach is adopted, are discussed. The book presents a useful contribution to studies in South Asia, as well as Asian Economics.

Degree First and Second Semesters Core Course; B.Com. (A & F), B.Com. (CS), B.Com. (BM), B.Com. (MM), B.Com. (CA) & B.Com. (ISM) The Cambridge History of Black and Asian British Writing John Wiley & Sons

At the beginning of the 20th century in the U.S., the mob phenomenon exploded. One of the most powerful exponents was Al Capone. He ranked among the most despicable gangsters of all time. He killed dozens of people. The climax came in 1929, when he ordered the assassinations of seven rivals. This became the greatest massacre in mob history. How did the story of Al Capone story end? Although he committed thousands of crimes he was only convicted with one. In 1931, he was finally convicted for Tax Evasion. A pool of Forensic Accountants directed the investigation. He served in prison for almost seven years. After that Al Capone was debilitated and mentally ill, he had to renounce to his mob career. Accountants were the ones that brought down Al Capone. While you may never bring criminals to justice through your accounting, you can realize the power that accounting does have. Although becoming a good accountant is a path that might take years of experience, forming the Accountant mindset is instead something that anyone can start at any time. Understanding and becoming aware of the fact that Accounting is the foundation of business is a crucial step to take. This manual will give you the tools to start this path and it will allow you to analyze the world with the Accountant eye. Eventually the world won't look the same again!

### Handbook in Monte Carlo Simulation Barron's Educational Series

World literature was long defined in North America as an established canon of European masterpieces, but an emerging global perspective has challenged both this European focus and the very category of "the masterpiece." The first book to look broadly at the contemporary scope and purposes of world literature, *What Is World Literature?* probes the uses and abuses of world literature in a rapidly changing world. In case studies ranging from the Sumerians to the Aztecs and from medieval mysticism to postmodern metafiction, David Damrosch looks at the ways works change as they move from national to global contexts. Presenting world literature not as a canon of texts but as a mode of circulation and of reading, Damrosch argues that world literature is work that gains in translation. When it is effectively presented, a work of world literature moves into an elliptical space created between the source and receiving cultures, shaped by both but circumscribed by neither alone. Established classics and new discoveries alike participate in this mode of circulation, but they can be seriously mishandled in the process. From the rediscovered Epic of Gilgamesh in the nineteenth century to Rigoberta Menchú's writing today, foreign works have often been distorted by the immediate needs of their own editors and translators. Eloquently written, argued largely by example, and replete with insightful close readings, this book is both an essay in definition and a series of cautionary tales.

"Biochar is the carbon-rich product when biomass (such as wood, manure, or crop residues) is heated in a closed container with little or no available air. It can be used to improve agriculture and the environment in several ways, and its stability in soil and superior nutrient-retention properties make it an ideal soil amendment to increase crop yields. In addition to this, biochar sequestration, in combination with sustainable biomass production, can be carbon-negative and therefore used to actively remove carbon dioxide from the atmosphere, with major implications for mitigation of climate change. Biochar production can also be combined with bioenergy production through the use of the gases that are given off in the pyrolysis process. This book is the first to synthesize the expanding research literature on this topic. The book's interdisciplinary approach, which covers engineering, environmental sciences, agricultural sciences, economics and policy, is a vital tool at this stage of biochar technology development. This comprehensive overview of current knowledge will be of interest to advanced students, researchers and professionals in a wide range of disciplines"-- Provided by publisher.
