*Sudden arrhythmic death: from basic science to clinical practice*  
 AuthorHouse

At speeds of over 230 miles per hour, the Indy open-wheel race cars set the bar for American Championship car racing. For over 100 years, the Indy cars and their drivers have drawn hundreds of thousands of spectators to Speedway, Indiana, with another 6 million people watching the race on television or by live stream. In *The Winning Cars of the Indianapolis 500*, James Craig Reinhardt, author and official tour guide for the Indianapolis Motor Speedway, details the history of the famous race and how the open-wheel race cars have evolved over the last century. Starting in 1911 with the first running of the Indy 500, Reinhardt profiles each race and car, including the starting position, engine, tires, race speed, margin of victory, and much more. Featuring nearly 200 images of the automobiles and individuals who make the race renowned, this book showcases the top drivers and how racing has changed through two world wars, the Great Depression, and unforgettable accidents. This beautifully illustrated book is a must-have for veteran and rookie race fans

alike.

*The Short Chute Edition* Indiana University Press

What role do human resource managers play in the processes of technical change in organizations? What opportunities or constraints are presented by different dimensions of technical change? How does technical change affect such issues as job design, supervision, total quality management, team-working, increased flexibility, skills training and employee involvement? In addressing these central themes and debates, this book provides a systematic analysis of the relations between technical change and human resource management (HRM). The contributors draw on research and case studies to clearly demonstrate that effective technical change in organizations is integrally related to effective HRM - as much by general and line managers as by specialist personnel managers.

No other guide covers the complete retail picture like this exciting new volume. America's retail industry is in the midst of vast changes - superstores and giant discounters are popping up on major corners. Malls are lagging while "power centers" are surging ahead. Savvy firms are combining bricks, clicks and catalogs into multi-channel retail powerhouses. Which are the hottest retailers? What lies ahead? Our market research section shows you the trends and a thorough analysis of retail technologies, chain stores, shopping centers, mergers, finances and future growth within the industry. Included are major statistical tables showing everything from monthly U.S. retail sales, by sector, to mall sales per square foot, to the 10 largest malls in the US. Meanwhile, the corporate profiles section covering nearly 500 firms gives you complete profiles of the leading, fastest growing retail chains across the nation. From Wal-Mart and Costco to Barnes & Noble and Amazon, we profile the major companies that marketing executives, investors and job seekers most want to know about. These profiles include corporate name, address, phone, fax, web site, growth plans, competitive advantage, financial histories and up to 27 executive contacts by title. Purchasers of the printed book or PDF version may receive a free CD-ROM database of the corporate profiles, enabling export of vital corporate data for mail merge and other uses.

This book consists of 25 case studies focusing on the human and organizational aspects of a range of applications of information technology. Cases are drawn from manufacturing and financial services, retail and communications businesses, in both the public and private sectors. The cases and the accompanying notes have been written by 39 people who are currently active in these fields.

Following a review and assessment of recent developments in capital market and banking systems, this year's International Capital Markets report reviews and assesses recent developments in mature and emerging financial markets and continues the analysis of key issues affecting global financial markets. It examines the systemic implications of the continued rapid development of the global over-the-counter derivatives markets and the expansion of foreign-owned banks into emerging markets. The report also analyzes market participants' assessments of the proposals for private sector involvement in the prevention and resolution crises.

Requirements for Flag Officer Expertise Today and in the Future SAGE

Recognized clinical leaders in neurosurgery and neuroradiology review the cutting-edge techniques and technologies now available and describe how minimally invasive techniques have influenced their subspecialties. On the radiology side, the authors explain the latest developments in magnetic resonance spectroscopy, functional imaging, and brain mapping, with emphasis on the application of image navigation directly in the operating room, using both preoperative and intraoperative

systems. On the surgical side, some of the world's leading surgeons in pediatric neurosurgery, cerebrovascular surgery, neurosurgical oncology, spinal and peripheral nerve surgery, and trauma surgery detail how they use the powerful new minimally invasive techniques in the own practices. Among the novel approaches discussed are radiofrequency, radiosurgery, thermal therapy, and minimally invasive techniques that allow "molecular neurosurgery" via gene and viral vectors and local delivery systems.

This book provides useful information on new observations and therapeutic approaches to common problems encountered in strabismus and pediatric ophthalmology. It also discusses the ocular findings in a number of rare conditions. All aspects of pediatric ophthalmology are addressed. The book describes a new strabismic condition and provides updates on research in the development of normal and abnormal monocular and binocular vision, and in ocular motility. All different strabismus types and their characterizations are covered, as well as nystagmus and other ocular motor disorders. The latest advances in relevant surgical and pharmacological management are discussed. Recent research on diseases of the lacrimal system, the anterior segment, cataracts, posterior segment, and neuro-ophthalmology is extensively covered. Update on Strabismus and Pediatric Ophthalmology presents the proceedings of the joint meeting of the VIIth Congress of the International Strabismological Association (ISA) and the 20th Annual Meeting of the American Association for Pediatric Ophthalmology and Strabismus (AAPO&S). The meeting had more than 750 participants, making it the largest conference ever held in the field of strabismus and pediatric ophthalmology.

Covers employers of various types from 100 to 2,500 employees in size (while the main volume covers companies of 2,500 or more employees). This book contains profiles of companies that are of vital importance to job-seekers of various types. It also enables readers to compare the growth potential and benefit plans of large employers.

Blackwell Pub

This book started as a self-serving exercise to personally organize the major details and interesting facts of each Indianapolis 500 over the hundred-plus-year history of the greatest race in the world. For many of us passionate racing fans who have attended a multitude of 500s, there is a tendency for the details of the races to (somewhat) blend together. I hope this book will help to provide clarity in this regard as well as educate. During high school, many of us chose to use CliffsNotes to assist in the education process. This book is somewhat patterned after that concept. It falls somewhere between Donald Davidson and Rick Schaffer—the best and by far the most detailed book on the history of the Indianapolis 500—and a multitude of pictorial books with limited information. I hope it will prove to be an easy read with entertaining and educational information.

*Imaging of Prosthetic Joints* Plunkett Research, Ltd.

Passé 45 ans, on est « vieux » ! On est soupçonné de graves maux : rigidité, lenteur, ancrage dans le passé, négativisme, manque d'inventivité, ignorance des outils numériques, dénigrement des jeunes, etc... Dans la plupart des entreprises, il devient difficile de se maintenir, d'être perçu comme utile, d'occuper sa juste place, et encore plus d'y évoluer. En recherche d'emploi, c'est encore plus difficile ! Convaincre un recruteur de sa possible va-leur ajoutée, surtout si on n'a jamais eu à le faire, à « se vendre », c'est mission impossible. Dans notre société, le jeunisme est de mise et les seniors qu'on nous présente sont

souvent des exceptions qui ont particulièrement bien réussi dans leur domaine. Qu'en est-il réellement ? Comment changer cette image et, vraisemblablement, certains aspects de cette réalité ? Notre société déconsidère les seniors, ne tire pas profit de tout ce qu'ils pourraient lui apporter. Elle est clivée et se prive d'un levier majeur. Voilà pourquoi les seniors ne doivent plus attendre que cette situation change : c'est d'abord à eux de se prendre en main, de croire en eux, et de se mettre en avant en toutes situations. S'ils se battent, leur image et les habitudes changeront. Cet ouvrage vise à les aider à trouver les moyens et le courage de passer à l'action. Valoriser leur place dans la société comme dans leur entreprise, afin de s'y développer et d'y être utile. Leur donner les meilleures chances de retrouver un emploi si nécessaire. Cet ouvrage a pour objectif d'aider :

- les seniors à trouver leur juste place dans la société, des possibilités de s'y développer et d'y être utile aux autres,
- les seniors employés à conserver leur emploi et à s'épanouir dans leurs fonctions professionnelles,
- les seniors en recherche d'emploi à se donner les meilleures chances de réussite,
- et les plus jeunes à mieux connaître les seniors, car ils ont tout intérêt à bien fonctionner avec eux et... à se préparer à devenir senior un jour !

A propos de l'auteur Alexandre Ginoyer est un jeune soixantenaire au cœur de l'action et de la ré-flexion. Consultant-coach indépendant, il accompagne les entreprises dans des projets de changement pour lesquels l'optimisation des ressources humaines prend une part de plus en plus importante. Il conçoit et anime des actions formatives pour les salariés, notamment à l'affirmation de soi, au management et à la communication, et accompagne depuis 7 ans, des chercheurs d'emploi de tous âges, métiers, niveaux, cultures. Il est Délégué Général du Comité mondial pour les apprentissages tout au long de la vie, ONG internationale en lien avec l'UNESCO. Un livre publié par Ixelles éditions Visitez notre site :

An increasing percentage of the population has at least one prosthetic joint. Imaging is required for both initial assessment and routine follow-up of the implant, and this book is intended as an informative and up-to-date guide to the subject. After an introductory section covering a range of background topics, the level of information offered by different imaging techniques in presurgical planning and postimplantation assessment is analyzed. The application of imaging to different joints is then carefully explored in chapters devoted to the foot and ankle, hip, knee, shoulder, and elbow, wrist and hand. In addition, two innovative chapters focus on periprosthetic DXA as the gold standard in monitoring implant survival and on the role of drug therapy in helping to ensure the durability of the prosthesis. A central feature of the book is its combination of the clinical and radiological perspectives; it will be of value to radiologists and orthopedic specialists, as well as residents in these disciplines.

The six volume set LNCS 11361-11366 constitutes the proceedings of the 14th Asian Conference on Computer Vision, ACCV 2018, held in Perth, Australia, in December 2018. The total of 274 contributions was carefully reviewed and selected from

979 submissions during two rounds of reviewing and improvement. The papers focus on motion and tracking, segmentation and grouping, image-based modeling, deep learning, object recognition object recognition, object detection and categorization, vision and language, video analysis and event recognition, face and gesture analysis, statistical methods and learning, performance evaluation, medical image analysis, document analysis, optimization methods, RGBD and depth camera processing, robotic vision, applications of computer vision.

#### *Brief Points* Springer Science & Business Media

With upwards of 4.5 million deaths worldwide each year, and more than one tenth of these occurring in those with no previously documented heart disease, sudden arrhythmic death (SAD) is both a major public health burden and a highly emotive issue for society at large. Recent years have witnessed a marked expansion in our knowledge of the physiology underlying SAD, both in the context of hereditary and acquired cardiac disorders. Thanks largely to work in genetically modified animals, the growth in our understanding of mechanisms underlying arrhythmia in the hereditary channelopathies has been particularly marked. Our growing knowledge of the fundamental mechanisms underlying SAD has so far failed to spur substantial developments in clinical practice. Despite a large body of work in both humans and animals, it remains impossible to confidently identify those at high risk of SAD, making pre-emptive therapy a challenge. What is more, with the thankful exception of the implantable cardioverter-defibrillators and pharmacological agents in very specific situations, there has been depressingly little progress in finding new and effective therapies. This Research Topic aims to go some way towards bridging the gap between advances in basic science and the development and delivery of new therapies. It brings together original research contributions and review articles from key opinion leaders in the field, focusing on the direct clinical implications of the basic science research now and in the future

As the array of expertise required to be a successful leader in the U.S. Navy has become more complex, Navy leaders have become increasingly concerned that senior officers need additional kinds of expertise, beyond those traditionally developed in naval officers, to be successful in commanding, leading, and managing the Navy enterprise. This study explores whether there is a gap in officer development that manifests itself in the flag officer ranks. Through surveys and interviews, and working with the Navy's Office of the Executive Learning Officer (ELO), the authors examined the kinds of expertise required for successful performance in Navy flag billets. They then created a model to determine the kinds of experience that the pool of Rear Admiral officers must have to fill these requirements, and compared it to actual experience possessed by several years of Rear Admiral selectees. The authors did not find major gaps between the kinds of experience required for flag billets and those possessed by candidate officers, but they did identify several combinations of expertise that the Navy should work to develop in officers to better meet current requirements. Hanser et al. also examined

the Navy's structure, force development, doctrine, and technology acquisitions to identify the types of expertise likely to become more important for Navy leadership in the future. The authors conclude with a variety of recommendations on how the Navy might better prepare officers for senior leadership roles. Covers almost everything you need to know about the food,

beverage and tobacco industry, including: analysis of major trends and markets; historical statistics and tables; major food producers such as Kraft and Frito Lay; and more. It also includes statistical tables, a food industry glossary, industry contacts and thorough indexes.
