Medical Pharmacology and Therapeutics CRC Press

Pharmacological knowledge among medical students can have a very short 'half life': students often fail not because they have failed to study, but because they have been unable to retain key knowledge and reproduce it in an exam setting. This book takes an alternative route to the conventional approach of comprehensively exploring each individual drug and its features: not only can such an approach overwhelm and make knowledge retention difficult, but the current exam format makes questions structured in this way unlikely anyway. Instead of aiming to be completely comprehensive, it examines drugs systematically by classifications, mechanisms of action, therapeutic uses and side effects, enabling students to gain the distilled, functional grasp of pharmacology that their exams actually demand quickly and clearly.

Textbook of Medical Pharmacology, 2e McGraw Hill Professional

This is the perfect pharmacology textbook for medical and pharmacy students. The book was developed on the +30-year experience of the author as pharmacology professor in the United States and Germany. The book discusses the most important drugs (400) in the context of relevant diseases. Summary tables and schemes, MCQ exam questions, case studies and a list of drugs aid memorization of the material before an exam. All chapters are written in the same concise style and use a modern and precise pharmacological nomenclature. After reading of the book, the student will be able to critically assess the proper use of the most important drugs and advise patients properly. The didactic concept of the book has been developed on the author's own pharmacology courses for which he has received numerous teaching awards. The book takes advantage of the learning spiral, in which material is presented repeatedly from various angles. This book is an adaptation for an international audience of the German textbook "Basiswissen Pharmakologie" (2018); ISBN: 978-3-662-56303-8.

Handbook of Pharmacy Healthcare Jaypee Brothers, Medical Publishers Pvt. Limited

Clinical pharmacology remains at the heart of surgical and medical practice, and this comprehensive textbook introduces the major topics. It describes in detail the therapeutic use of the ever increasing catalogue of medical drugs available for prescription by a physician/nurse practitioner. All areas of drug prescribing are covered and have been updated since the previous edition, especially the rapidly changing fields of HIV treatment and biotechnology drugs. 'The Textbook of Clinical Pharmacology', 4th edition adopts a systems-based approach and covers the core syllabus for medical undergraduates. In this edition, new chapters on drugs and the eye, and molecular therapeutics have been included. Key points have been highlighted for revision and challenging clinical pharmacology cases will help the reader to assess their learning. The improvements to this edition of a 'Textbook of Clinical Pharmacology' ensures that the book remains the core text for undergraduates.

A Textbook of Pharmacology and Therapeutics, Or, The Action of Drugs in Health and Disease Pharmaceutical Press

Excerpt from A Textbook of Pharmacology and Therapeutics, or the Action of Drugs in Health and

Disease Dcmc the eighteen months which have elapsed since the appearance of the second edition, several important advances have been made in pharmacology, necessitating corresponding changes in the text. The most interesting of these advances is the authoritative and, it is to be hoped, final determination of the food value of alcohol, which has been treated in more detail than in former editions. The increasing use of cocaine as a local anesthetic, and the introduction of the subarachnoid method of medication required an expansion of the chapter on this drug, and the same may be said of the pages devoted to the adrenal gland. Numerous minor changes have been made to bring the text up to date and several new illustrations have been added.
