Study habits are defined as those techniques, such as summarizing, note taking, outlining or locating material which learners employ to assist themselves in the efficient learning of the material at hand. The term "Study Habit" implies a sort of more or less permanent method of studying. According to Good's dictionary of education, "Study habit is the tendency of pupil to study when the opportunities are given, the pupil's way of studying whether systematic or unsystematic, efficient or inefficient." Study-habits are the essence of a dynamic personality. A proper study habits enables an individual to reap a good harvest in future. The present society is a competitive society, where the principle of struggle for existence and survival for fittest exists. Pen has become mightier than sword. Study-habit is a process from which an individual gets proper input to feed his hunger and to quench his thrust for knowledge. The study habits thus are of great assistance to actualize the potentialities of the individual. Good study habits lead to good academic record and bad study-habits lead to poor academic record as there is direct relationship between study habits and academic achievement.

STUDY HABIT Allied Publishers

STUDY HABITS The research reported in this thesis makes a modest study of Study Habits in post-graduate students in relation to certain important social and psychological factors. The sociological variables include ethnicity, faculty and gender while the psychological variables consist of adjustment, aspiration, and parental support. The data of study habits and use of library, adjustment, aspiration and parental support were collected from 400 post-graduate students drawn from four faculties namely Arts, Science, Commerce and Medicine. Each faculty was represented by 100 cases divided into an equal number of tribal, non-tribal, male and female cases. In addition to the above noted psychological variables, the academic achievement of the student was also taken into account. The marks obtained by the students in their last examination were considered as a measure of academic achievement. The data obtained were analyzed to measure the extent of Study Habit and Use of library among Post Graduate students of four faculties. Besides, an attempt was made to examine the main and interaction effect of ethnicity, faculty and gender on two main dependent variables namely Study Habits and Use of Library. Furthermore, the relationship of Study Habits and Use of Library was examined with adjustment, aspiration and parental support. Inter-relationship of Study Habits and Use of Library was also studied and those two variables were correlated with academic achievement.

Relationship Between Study Habits and Test Anxiety of Higher Secondary Students The Relationship Between Study Habits and Academic Success Among African American College Students Introductory Psychology

This Handbook is the most comprehensive and up-to-date source available for college reading and study strategy practitioners and administrators. In response to changing demographics, politics, policy, issues, and concerns in the field of college reading and study strategies since publication of the first edition in 2000, this new edition has been substantially revised and fully updated to reflect the newest research in the field, including six new chapters and a more user-friendly structure to make it easier for researchers, program administrators, college instructors, and graduate students to find the information that they need. In this thorough and systematic examination of theory, research, and practice, college reading teachers will find information to make better instructional decisions, administrators will find justification for programmatic implementations, and professors will find in one

book both theory and practice to better prepare graduate students to understand the parameters and issues of this field. The Handbook is an essential resource for professionals, researchers, and students as they continue to study, research, learn, and share more about college reading and study strategy issues and instruction.

The Relationship of Study Habits and Attitudes to Success in Freshman Year of Medical School Ashok Yakkaldevi

The last few years have seen a growth in the number of psychology courses which are being offered as single subject or combined studies options in universities, polytechnics and colleges of higher education. More recently, there has been a marked increase in the number of students in schools and colleges of further education taking 'A' level, 'O' level and 'Ala' level psychology examinations. Psychology, too, features much more prominently in professional training schemes, and it is now quite common to encounter the subject in courses for police officers, clergy, teachers, nurses and other paramedical and caring professions. In the past, students had to rely extensively on a diet of psychology texts published in the USA, supplemented by a few modest British contributions, and by a number of specialist books written by scholars reflecting their particular interests. Nowadays, it is possible to point to a significantly larger number of British texts and monographs which deal with major issues in psychology, and a number of general textbooks have been written especially for school and college students preparing for GeE examinations.

The present study aims to probe the relationship between study habits and test anxiety of higher secondary students. In this normative study survey method was employed. The population for the present study consisted of higher secondary students studying in Tirunelveli district. The investigator used the simple random sampling technique. The sample consisted of 300 students from 10 higher secondary schools. The investigator used the Study Habits Scale by Santhy, K.R. (2010) and Test Anxiety Scale by Sharma, V.P. (1997). For analyzing and interpreting the data the investigator used percentile analysis, standard deviation, "t" test, and Pearson's product moment correlation as the statistical techniques. The findings show that (i) the level of study habits and test anxiety of the higher secondary students were moderate (ii) there was no significant relationship between study habits and test anxiety of higher secondary students.

The Relationship of Intelligence, Attitudes, and Study Habits to Academic Achievement
New Delhi Publishers

The present study was probed to find the significant relationship between study habits and academic achievement of higher secondary school students with reference to the background variables. Survey method was employed. Data for the study were collected from 300 students in 13 higher secondary schools using Study Habits Inventory by V.G. Anantha (2004) and the Quarterly Achievement Test Questions. The significant difference between the means of each pair of group was computed using Standard Deviation, "t" test, ANOVA and Pearson's Co-efficient Correlation. The findings were established and tabulated from the analysed data. The finding shows that there was no significant difference between study habits and academic achievement of higher secondary school students. Finally, Interpretations were given by the investigator based on the findings.

Epistemological Studies across Diverse Cultures Lulu International Press & RED'SHINE Publication. Inc

1.0 Introduction: Of all the creation of God human life is the most sacred. It has two aspects - the biological and sociological. While the biological aspects of human life is maintenance and transmission through nutrition and reproduction, the social aspect of human life is maintenance and transmission by education. In the primitive society, the primary needs of man comprised food, shelter and clothing. With the progress of the society and civilization, however those primary needs have been multiplied into six viz - food, shelter, clothing, education, recreation and health. Man is primarily distinguishable from the lower animals because of his educating ability. He is endowed with intelligence; he wants to remain active, energetic and even original. He desires to go ahead, this list of human achievement

is very big. How has all these been done? through education. It is education which promotes his intelligence, creativity, and emotional intelligence. and even it effects on their problem solving ability too. All these things are reflected in one's achievement.

An Exploratory Study of the Relationship of Study Habits, Expected Grade and Instruction Effectiveness Ratings to Academic Performance
GRIN Verlag

Information Technology is playing a Vital role in the modern world. It has revolutionized the way in which we used to live and think. All spheres of life are affected by the use of ICT and internet. The field of education is no exception. Education is the main tool of all round development of people, society and nation. Economic and social developments can be possible through education only. It is main instrument which sustains the all-round development and maintain the social and economic development of the country.

Dimensions of Innovations in Education Independently Published
There have been a countless new developments in the field of education. It is a fact that in recent years Education has emerged as a professional subject knowledge of which is essential for an effective instruction. The utility of the book is further enhanced by the provision of summary and references and appendices. Not only this the logistic and lucid presentation of the book will foster critical thinking and creative imagination in dealing with the students. It is hoped that this book will enable the teachers to perceive classroom situations with a deeper insight and also increase his/her professional competence. They can focus on the shortcomings of the students so that they can be tackled well in time and can groom and excel in all fields of life.

Study Habits : Socio-Psychological Research Routledge

Bringing together prominent educators and researchers, this book focuses on conceptual and methodological issues relevant to the nature of knowledge and learning. It offers a state-of-the-art theoretical understanding of epistemological beliefs from both educational and psychological perspectives. Readers discover recent advances in conceptualization and epistemological studies across diverse cultures. This is an unbeatable resource for academics and researchers alike.
