U.S.-Peru Trade Promotion Agreement: Potential Economy-Wide and Selected Sectoral Effects, Inv. TA-2104-20 DIANE Publishing
 This thesis investigates the economic interrelationships that tourism has in the wider economy in the context of a country that is heavily reliant on tourism revenues. More specifically, it seeks to examine the welfare, intersectoral, distributional, competitive, investment and dynamic issues relating to the tourism sector that have been under investigated in both the tourism and trade literature. These issues have been investigated empirically using Computable General Equilibrium (CGE) analysis. The thesis is set out as follows: Chapter 1 sets out the relative position of Spain in terms of its international competitors and defines the tourism sector. It also explains why CGE modelling is felt to be the most suitable approach for modelling the Spanish tourism sector for the purposes of this thesis. It also presents an overview of the planned research. Chapter 2 gives an overview of the structure and key features of the Spanish economy. It discusses the evolution of the tourism sector and how it varies between the different autonomous communities in Spain. The Spanish Tourism Satellite Account is presented and Spanish tourism policy is examined. Chapter 3 reviews the theoretical and empirical literature on CGE modelling and tourism analysis relevant to this thesis. Various types of CGE model are scrutinised and their usefulness assessed. The role of tourism in international trade is considered and the characteristics of the tourism sector that need to be embodied into a CGE model are discussed. Chapter 4 describes the core CGE model used in this thesis and the underlying equations that are associated with it. The central data set used is the Spanish input-output table for 1996. This data set is described and all subsequent input-output tables used in other chapters are amended so as to be consistent with this data set. Closure rules, elasticity parameters, solution methods and calibration methods are also discussed. Chapter 5 presents the results of the experiments carried out with the dynamic Spanish national CGE model. The core model presented in Chapter 4 has been extended to incorporate foreign direct investment and these changes are disclosed in the opening sections. Counterfactuals are designed so as to estimate the impact of foreign direct investment inflows and tourism demand shocks on the Spanish economy. Sensitivity analysis of the key exogenous parameters is also undertaken. Chapter 6 presents the results of the experiments carried out on the static regional CGE model of the

regions of Spain. Input-Output tables for four of Spain's autonomous regions were obtained and integrated with the Spanish national table to create a data set which accounts for the four regions analysed and the remainder of the Spanish economy. The model presented in Chapter 4 is adapted to incorporate regional trade flows and structural differences are discussed. Counterfactuals are designed in order to investigate how regional tax policy might affect tourism flows in Spain and how tourism demand impacts on different regions in Spain. Sensitivity analysis of the key exogenous parameters is also undertaken. Chapter 7 presents the results of the experiments of the dynamic CGE model for the Canary Islands. The core model is identical to that presented in Chapter 4, except that it is applied at a sub-national rather than a national level. Counterfactuals are designed so as to take account of the issues affecting a small island economy that is heavily reliant on tourism. As before, sensitivity analysis of the key exogenous parameters is also undertaken. Chapter 8 summarises the findings of this study, highlights possibly policy implications and cites limitations of the research. Suggestions for further research are also highlighted.

New Developments in Computable General Equilibrium Analysis for Trade Policy A Practical Guide to Trade Policy Analysis
 This Guide to Trade Policy Analysis provides the main tools for the analysis of trade policy. Written by experts with practical experience in the field, this publication outlines the major concepts of trade policy analysis and contains practical guidance on how to apply them to concrete policy questions. The Guide has been developed to contribute to the enhancement of developing countries' capacity to analyse and implement trade policy. It is aimed at government experts engaged in trade negotiations, as well as students and researchers involved in trade-related study or research.
Essays on Institutional and Macroeconomic Aspects of International Trade
 The overarching theme of this dissertation is the analysis of institutional and macroeconomic factors that shape and interact with international trade. Chapters 1, 2 and 4 of this dissertation examine how institutional arrangements impact trade policy decisions and bilateral trade flows, while chapter 3 analyzes how the structural composition of trade affects macroeconomic development. Chapters 1 and 2 focus on the emergence of trade disputes in the World Trade Organization (WTO). Starting out in chapter 1 with a thorough stylized facts analysis of the usage pattern of the WTO dispute settlement mechanism, chapter 2 develops and empirically tests a model of members' selection into WTO disputes which can account for a number of key discoveries in the data. In particular, I extend the standard WTO theory by incorporating a link between endogenous trade policy formation and agreement violation and dispute filing decisions. I show that countries are more likely to engage in trade disputes as complainants or defendants when they have a small

tariff overhang", which represents the difference between bound tariffs (by WTO negotiations) and the actually applied tariffs. Chapter 3 considers the question whether the structure of a nation's trade flows has a clear-cut effect on economic growth. In the growth determinants literature, numerous alternative candidate regressors have been motivated by alternative theories but not one trade regressor has been robustly related to growth. Instead of relying on aggregate trade measures as previous studies, chapter 3 proposes a structured approach and examines the diversity of sectoral exports as a potential growth determinant. Controlling for model uncertainty and endogeneity, chapter 3 shows that export diversity serves as a crucial growth determinant for low income countries, an effect that weakens with the level of development. Chapter 4 examines to what extent underlying differences in the design of preferential trade agreements (PTAs) are responsible for the observed heterogeneity in PTA effects on bilateral trade flows. Controlling in the estimation framework for multilateral resistance terms and bilateral heterogeneity to reduce omitted variable and endogeneity biases, chapter 4 shows that PTAs focusing on goods trade liberalization and the legal enforceability of agreement provisions are most successful in raising trade flows. Moreover, countries' efforts to harmonize product standards and other regulations decrease bilateral trade flows, at least initially. The results also show that the underlying agreement dimension effects mostly operate through the intensive margin of trade.

 A Practical Guide to the Economic Analysis of Non-Tariff Measures
 Quantitative Analysis of Newly Evolving Patterns of International Trade offers a variety of perspectives on new forms and developments of international trade and related activities for Japan, the United States, China, and some other important trading countries, to develop new methods and data for measuring the factor contents of emerging new modes of international trade. Such methods and data are crucially important for evaluating impacts of the new modes on factor markets in the United States, Japan, and other major trading countries, and also for forecasting the future development of world trade and foreign direct investment (FDI), evaluating welfare gains from trade, estimating impacts of free trade agreements, and designing effective trade and FDI policies.

This book is designed for a one-semester or two-semester course in international economics, primarily targeting non-economics majors and programs in business, international relations, public policy and development studies. It has been written to make international economics accessible to wide student and professional audiences. The book assumes a minimal background in microeconomics and mathematics and goes beyond the usual trade-finance dichotomy to give equal treatment to four 'windows' on the world economy: international trade, international production, international finance and international development. It takes a practitioner point of view rather than a standard academic view, introducing the student to the material they need to become effective analysts in international economic policy. This book is the definitive guide to cash flow statement analysis and forecasting. It takes the reader from an introduction about how cash flows move within a business, through to a detailed review of the contents of a cash flow statement. This is followed by detailed guidance on how to restate cash flows into a template

format. The book shows how to use the template to analyse the data from start up, growth, mature and declining companies, and those using US GAAP and IAS reporting. The book includes real world examples from such companies as Black and Decker (US), Fiat (Italy) and Tesco (UK). A section on cash flow forecasting includes full coverage of spreadsheet risk and good practice. Complete with chapters of particular interest to those involved in credit markets as lenders or counter-parties, those running businesses and those in equity investing, this book is the definitive guide to understanding and interpreting cash flow data.

[Emerging Lessons for Export Diversification](#) OECD Publishing

During the last century international trade has become indispensable for many economies. This is not only the case for trade in primary raw materials and consumer products but also for secondary (recyclable) materials. With the rapid growth of the recycling sector worldwide, trade in recyclables increased tremendously. It is striking that most of this trade flows from developed to developing countries. This book addresses the main causes of this typical trade pattern and investigates its economic and environmental effects by carrying out case studies on waste paper imports in India, waste plastics imports in China, and used-tyre trade in Europe. The book concludes by recommending policies that are aimed at preventing negative economic and environmental effects potentially resulting from trade in recyclables. The book offers new ideas to researchers who are involved in international trade, material flows, and waste management, and provides new insights for decision-makers who are interested in WTO and the Basel Convention.

This thesis consists of two chapters. Chapter 1, which is a joint work with Lorenzo Caliendo, builds into a Ricardian model the role of trade in intermediate inputs, sectoral linkages and differing productivity levels across sectors. We also propose a method to estimate sectoral trade elasticities. In our model, the trade effects due to overall tariff reductions account for most of the observed changes in trade flows for NAFTA members. We decompose the effects of NAFTA and find that 93% of Mexico's, 58% of Canada's and 55% of the United States' trade effects can be attributed to NAFTA's tariff reductions. Trade in intermediate inputs and input-output linkages can amplify the welfare effects of tariff reductions.

Political and social forces exert pressure on our globalized economy in many forms, from formal and informal policies to financial theories and technical models. Our efforts to shape and direct these forces to preserve financial stability reveal much about the ways we perceive the financial economy. The Handbook of Safeguarding Global Financial Stability examines our political economy, particularly the ways in which these forces inhabit our institutions, strategies, and tactics. As economies expand and contract, these forces also determine the ways we supervise and regulate. This high-level examination of the global political economy includes articles about specific countries, crises, and international systems as well as broad articles about major concepts and trends.. Substantial articles by top scholars sets this volume apart from other information sources Diverse international perspectives result in new opportunities for analysis and research Rapidly developing subjects will interest readers well into the future
