## ALEAH SHERLYN

*Phytoremediation of Emerging Contaminants in Wetlands* St. Martin's Griffin

A raw and exciting duet by authors Brynne Asher and Layla Frost. Two very different sisters. Two very different lives. And two very different romances... The Dillon Sisters: Deathly by Brynne Asher and Damaged by Layla Frost

**Asymmetric Catalysis on Industrial Scale** John Wiley & Sons

Tequila: a distilled beverage made from the blue agave plant and, in Mary's case, a truth serum. It took one night. No, it took one dinner, a bevy of cocktails, and a woman who's been skirting me for months. Then, everything changed. Because the tequila did what it does best, Mary's words flowed faster than the magic liquid she was shooting with salt and lime. Mary had demons--ones she thought were buried. She thought wrong. She can't hide from her past or from me. Not anymore. I'm Evan Hargrove and I'll turn the world red before I let anything happen to her. This is a Killers Series Crossover Novella written for the Happily Ever Alpha World of NYT Bestselling Author, Aurora Rose Reynolds. Warning: This book contains naughty words and sexy bits. If you aren't eighteen, step away from the purchase button, turn around, and walk away. We'll pretend this never happened and I won't tell your parents.

*Evaluation Technologies for Food Quality* Springer Science & Business Media

This book reviews the evidence relating to the mechanisms, clinical efficacy, safety/toxicity, and clinical application of tooth whitening techniques and materials. All clinical techniques are profusely illustrated step by step. The book is divided into four parts, the first of which explains how tooth whitening with peroxides works and examines the overall safety of peroxides and potential complications. The findings of clinical trials with peroxide-based materials for clinical practice are then examined, with discussion of a wide range of issues in at-home whitening and in-office whitening. The third part focuses on the techniques of enamel microabrasion and resin infiltration, which entail removal of a microscopic layer of enamel and may be used to improve tooth color either alone or in combination with peroxides. The concluding part includes a variety of informative clinical cases using combined bleaching and restorative techniques for discolored teeth. **Tooth Whitening — An Evidence-Based Perspective** will be of interest for dentists, dental hygienists, dental assistants, and others with an interest in the subject

*Planets, Stars and Stellar Systems* Springer

This volume consists of 15 chapters and focuses on hazardous chemicals, how they are associated with plastics, and their environmental risks. It includes background information on plastics and additives chemistry, and their observed or potential effects on living organisms as well as the oceanographic aspects of marine debris dispersion. The respective chapters provide insights into the sorption/desorption of chemicals in and out of plastics, the mechanisms and kinetics, but also the scale of the concentrations of chemicals found in marine debris, particularly in microplastics. The occurrence of the various chemicals is analyzed, as well as the distribution profiles of the chemicals in microplastics throughout the world's oceans. The implications of the fact that plastics carry within them several chemicals are discussed in detail. In closing, new research topics that warrant further attention are identified. The book will appeal to all scientists who are already working or interested in starting to work on the topic of marine debris, as well as policymakers, NGOs and the broader informed public.

**The Tears of Eros** Createspace Independent Publishing Platform

Cam Montgomery is a single full time dad who knows his priorities: his kids, his job, his team, his side business. Dealing with his disaster of an ex-wife is bad enough, not to mention delinquent football players and a meddlesome mother. Cam doesn't have the luxury of time for anything more,

especially a relationship. Even if it is sassy-wiseass Paige Carpino, who can still be sweet, but at every turn knocks him on his ass with the unexpected. That's figuratively speaking of course. Paige might come in a small package, but she makes up for it in spirit. An energetic spit-fire who has some heat to her sauce, she's dedicated to her new business ventures, her family and a select group of friends. She's never put herself out there, but then again, there's never been anyone worthy of putting herself out there for. Until one day in a burger joint, an asshole practically enters her into a wet t-shirt contest with his drink. Who knew a wet t-shirt could be the beginning of your life. Or more importantly, that asshole would be your reason for being. But anything and all of the above can happen when you finally put yourself out there for a single-dad-ex-football-player-smarty-pants-hot-man. When you throw the Carpino's, the Montgomery's and an eighty-five year old bossy woman in the mix, it's a recipe for...well...something big. Warning: This book contains a hot dad, a sassy heroine, steamy parts and naughty words. If you're under the age of 18, this author is frowning at you with her mama eyes telling you to walk away.

*Blackburn (Special Forces: Operation Alpha)* Springer Nature

Birds were "the objects of my greatest delight," wrote John James Audubon (1785-1851), founder of modern ornithology and one of the world's greatest bird painters. His masterpiece, *The Birds of America* depicts almost five hundred North American bird species, each image--lifelike and life size--rendered in vibrant color. Audubon was also an explorer, a woodsman, a hunter, an entertaining and prolific writer, and an energetic self-promoter. Through talent and dogged determination, he rose from backwoods obscurity to international fame. In *This Strange Wilderness*, award-winning author Nancy Plain brings together the amazing story of this American icon's career and the beautiful images that are his legacy. Before Audubon, no one had seen, drawn, or written so much about the animals of this largely uncharted young country. Aware that the wilderness and its wildlife were changing even as he watched, Audubon remained committed almost to the end of his life "to search out the things which have been hidden since the creation of this wondrous world." *This Strange Wilderness* details his art and writing, transporting the reader back to the frontiers of early nineteenth-century America.

*Bad Situation* City Lights Books

Drawing from a decade-long collaboration between Japan and Russia, this important volume presents the first major synthesis of current knowledge on the ecophysiology of the coniferous forests growing on permafrost at high latitudes. It presents ecological data for a region long inaccessible to most scientists, and raises important questions about the global carbon balance as these systems are affected by the changing climate. Making up around 20% of the entire boreal forests of the northern hemisphere, these 'permafrost forest ecosystems' are subject to particular constraints in terms of temperature, nutrient availability, and root space, creating exceptional ecosystem characteristics not known elsewhere. This authoritative text explores their diversity, structure, dynamics and physiology. It provides a comparison of these forests in relation to boreal forests elsewhere, and concludes with an assessment of the potential responses of this unique biome to climate change. The book will be invaluable to advanced students and researchers interested in boreal vegetation, forest ecology, silviculture and forest soils, as well as to researchers into climate change and the global carbon balance.

**Lipidomics** Springer

Phytoremediation with wetland plants is an eco-friendly, aesthetically pleasing, cost-effective, solar-driven, passive technique that is useful for cleaning up environmental pollutants with low to moderate levels of contamination.

*Paths* Springer Science & Business Media

Gabrielle Carpino has forced herself to move through the motions of life over the past few years since tragedy touched her family. Closing herself off from living her life and refusing to look in the

future has become her norm...that is until one day at a clients home where she's thrown into a tailspin of craziness. Gabby's awakening begins as she is cuffed and patted down by Special Agent Jude Ortiz, with his dark chocolate eyes and a commanding bossy way that Gabby just can't resist. When Jude's protective instincts kick in, he finds himself wrestling feelings he hasn't allowed in years and he moves in to watch over Gabrielle. Between battling criminals, flooded basements, fantasy football drafts and Gabby's crazy family, Jude finds himself unable to resist her beauty and quirkiness. What begins to look like a chance at happiness for Gabby and sexy Jude Ortiz, it could all be ripped away when past demons are forced into the light. Jude fights off the demons around them creating a safe place for Gabby to allow herself to overflow and live again.

*The Conquest of Lady Cassandra* Springer

The Soils of Croatia is a six-chapter book detailing all aspects of Croatian soils. The book presents, in a reader friendly way, the lively history of pedology in Croatia. It explains soils as natural resources for this country and offers a detailed view on the different agricultural regions referenced in Croatia. The Soils of Croatia also contains useful information regarding the different factors of soil genesis in the different regions as well as on soil taxonomy and it gives a very detailed classification of different Croatian Soils. Overall, this book contains everything that pedologists, students and anyone else interested in Croatian soils should know about.

**The Acari** Createspace Independent Publishing Platform

Dreams. I never had one. Never even knew what a dream was until a certain unassuming Carpino waltzed into my life. That day my world tilted. It became unhinged. I might not have been a dreamer, but she was. She wrote the words missing from my life. Her notes ignited my heart. Her flame lit up my darkness. Her dreams became mine and I'd move heaven and earth to give them life. Especially when my past surfaced and threatened to kill every dream we had. Until Avery, I had nothing. But I'm Link Forester. I'd fight for her, for us, because right now, I have everything to lose. Warning: The author will have a dramatic fit-Scarlett O'Hara style-if anyone under the age of eighteen touches this book.

*Overflow* University of California Press

Maya Augustine needed to disappear-her life depended on it. When her path led her to the middle-of-nowhere Virginia, she found the perfect place to hide. A woman on the run, Maya had no business befriending anyone, let alone allowing herself to become involved with a man ... especially after her last experience. Even so, she couldn't help but become obsessed with the bruised, battered, and beautiful killer who walked into her life. Grady Cain reached rock bottom. His past finally caught up with him, causing him to lose his edge at work and in life. Spiraling down a desperate path of remorse and guilt, Grady wasn't expecting his refuge to come in the form of a woman. Day in-day out, she was the only thing he'd allowed himself to think about. To focus on. To consume him. One was running. The other had nothing to run to. Until these troubled souls crossed paths... And two paths became one. Warning: This author is a mom who runs a PG-13 home. This book is not PG-13. She would literally keel over and die if anyone under the age of 18 read this book. If you're not of age, save this author from her untimely death, and go read about teenage wizards. They're awesome.

*Late Antique Letter Collections* Jabberwocky Literary Agency, Inc.

This volume of proceedings contains review and research papers concerning the impact of modern dynamics in astronomy. Modern dynamics is playing an increasing role in the solution of problems raised by astronomical observations. This new relationship is being fostered by discoveries of new systems, such as the Kuiper belt, pulsar and star companions; by progress in theoretical dynamics, like KAM and Nekhorochev theories and adiabatic invariants; and by the dissemination of fast computers. The two main areas of applications which are discussed are stellar systems, including dynamics of galaxies, and small bodies in the solar system. In both cases the concepts and tools of chaotic motion are considered and fully discussed.

*This Strange Wilderness* CRC Press

Bringing together an international team of historians, classicists, and scholars of religion, this volume provides the first comprehensive overview of the extant Greek and Latin letter collections of late antiquity (ca. 300-600 c.e.). Each chapter addresses a major collection of Greek or Latin literary letters, introducing the social and textual histories of each collection and examining its assembly, publication, and transmission. Contributions also reveal how collections operated as discrete literary genres, with their own conventions and self-presentational agendas. This book will fundamentally change how people both read these texts and use letters to reconstruct the social history of the fourth, fifth, and sixth centuries.

**Drug-Coated Balloons** Woodhead Publishing

The breakup of a river ice cover can be both fascinating and perilous, owing to ever-changing ice conditions and dynamic processes that sometimes lead to extreme flood events caused by ice jams. Though much progress has been made recently in the study of ice jams, less has been achieved on the more general, and more complex, problem of how to predict the entire breakup process, from the first ice movement to the last ice effect on river stage. This type of knowledge is essential to determining when and where ice jam threats may develop and when they may release and generate steep flood waves that can trigger ice runs and jamming further downstream. In turn, such understanding is invaluable to natural hazard reduction, ecosystem conservation and protection, and adaptation to climatic impacts. This book combines the existing information, previously scattered in various journals, conference proceedings, and technical reports. It contains contributions by several authors to achieve a comprehensive and balanced coverage, including

qualitative and quantitative descriptions of relevant physical processes, forecasting methods and flood-frequency assessments, as well as ecological impacts and climatic considerations. The book should be of interest to readers of different backgrounds, both beginners and specialists. -- Publisher's website.

*Chronic and Recurrent Pain* John Wiley & Sons

Webster's defines to heal as "to make healthy, whole or sound; restore to health, free from ailment."

But Webster's also defines to heal as "to free from evil; cleanse; purify; to heal the soul." My soul is shattered. I'm one hell of a mess because I need both and I don't know how both can possibly happen. Sure, I know my body will heal. I understand the science of healing, it's my profession. But I sense the ache in my heart and fear in my head will never heal. Can I ever recover from losing an unborn child at the hands of my abusive husband? Will I ever learn to think for myself again? No, I've been trained to fear those who are supposed to love me, conditioned to watch my every move and word so as to not suffer the consequences. I don't think being healed will ever be a possibility for me. Or I didn't until Tony Carpino fixated himself in my life. Tony is patient. Determined. He knows exactly what I need even before I do. He's wants to give me everything, make my life beautiful when my life has always been ugly. But as perfectly determined and patient as he is, I don't know if I can ever be whole again. It doesn't matter how long I've wanted him...and I've wanted Tony Carpino for a long time. This is a story of heartache and broken souls. A story of being exactly what the one you love needs when they need it, even if it goes against every being of your nature. Because love isn't love unless it's selfless. Can Tony love Leigh enough to heal the demons that haunt her broken soul and have the woman he missed out on years ago? This is a love story. This is the story of Tony and Leigh.

*Deathly* Pluto Press

HER PRIDE. HIS PREJUDICE. THEIR PASSION. As headstrong as she is beautiful, Lady Cassandra Vernham defied convention when she refused to marry the man who had compromised her. Now, estranged from her family, Cassandra struggles to make ends meet. A recent auction of her jewels has brought her a modicum of relief, but one of the most valuable lots was never paid for by the highest bidder: handsome, rakish Viscount Ambury. Cassandra needs that money badly, and not to buy a new hat. Ambury has only to look at Cassandra to begin imagining her in his bed... He has not settled that outstanding debt for a reason. He suspects that the expensive baubles were stolen, perhaps even by Cassandra herself. Erotic fantasies about her notwithstanding, the vixen is not to be trusted, for she has already destroyed his good friend—the man she refused to marry who later lost his life in a duel, which Ambury suspects was fought over Cassandra. But nothing is as it seems... As the seductive lord and the scandalous beauty are drawn together, the passion that flares between them will illuminate shocking secrets that will change both their lives forever...

**Broken Halo** Springer Nature

This book provides a multi-disciplinary coverage of the broad fields of species, community and landscape conservation. The panel of contributors consider a range of topics in vegetation and biodiversity assessment, planning and management of conservation zones and protected areas, together with historical and social/legal issues of the environment and nature conservation. The book celebrates the life's work of Professor Franco Pedrotti.

**Athica Lane** Springer Science & Business Media

Edited by two of the experts in the field, the central aim is to show organic chemists working in process development that enantioselective catalysis is suitable for the large-scale production of enantioenriched intermediates. In so doing, it is equally a source of information and inspiration for academic research, and, with its contribution by Noble prizewinner W. S. Knowles, will also heighten the status of industrial catalyst specialists working in the exciting field of enantioselective catalysis. Some 25 contributions from top industrial researchers around the world present case studies on the development of the widest possible range of large-scale enantioselective processes, featuring stereoselective production processes of fine-chemicals, agrochemicals and pharmaceuticals. Clearly structured according to the nature of the task, this handbook adopts a problem-driven approach such that readers can easily find how colleagues have dealt with a similar situation.

*Tooth Whitening* Springer

Thesiologist, were not included. Perhaps the next symposium will have a paper on his many contributions. Even though his dates are not quite modern (1813-1858), his accomplishments were, especially his book *On Chloroform and Other Anaesthetics* (1858), the first comprehensive textbook on anaesthesia [2]. There has been a real renaissance of interest in the history of anaesthesia. Among those responsible for this rebirth, besides Dr. Ruprecht and Dr. Erdmann, are Dr. Selma Calmes and Dr. Rod Calverley, now on the Board of the new American society, the Anesthesia History Association. It held its inaugural meeting in Atlanta, Georgia, during the annual meeting of the American Society of Anesthesiologists, on 9 October 1983. The meeting was well attended, and the evening was profitable and delightful. Mention should also be made of the accomplishments of the nurse anaesthetists [3]. They are many in number, and generally they work under the direction of a physician anaesthesiologist. Although modern anaesthesia was America's first great medical discovery, it soon traversed the globe and found worldwide acceptance. The British, for example, have made many coeval and historic contributions. Besides Dr. Duncum one thinks of Prof. T. Cecil Gray, who pioneered the British use of fentanyl [4], and Dr. J. Alfred Lee, who was a pioneer in the use of spinal anaesthesia and is currently working on the fifth edition of a textbook on spinal analgesia [7]. Dr.
