So, you want to buy a campervan – or maybe you are still just dreaming about it: I totally understand. Owning your own campervan is beyond brilliant but, what sort of van do you buy? Or maybe you are going to take the brave step of converting your own van and are not sure where to start. You are probably going to spend a fair amount of your savings on this purchase, so you want to get it right. And you want to find a campervan that you will love and who loves you back. If this is a new world to you, it can be hard to even know what the options are. If you are an experienced camper there are still so many questions you need to ask yourself before you even begin looking at actual vehicles. Questions like: What is my camping style?, What is the best base vehicle for me?, What sort of interior suits my style of camping?, How will I power my van?, plus lots of other questions that will help you find the perfect van for you. "I Want a Campervan" talks you through all these questions and is your friend and guide on this amazing new journey that you are starting. So, take a big breath, find a great campervan and go live the dream! Summer Bourne writes a blog and books on the campervan life including cookbooks for camping meals. With her partner, Glyn, she has owned a Toyota micro camper and they have now converted a Vauxhall Vivaro panel van into a campervan called 'Big Red'.

Technological change is a central feature of modern societies and a powerful source for social change. There is an urgent task to direct these new technologies towards sustainability, but society lacks perspectives, instruments and policies to accomplish this. There is no blueprint for a sustainable future, and it is necessary to experiment with alternative paths that seem promising. Various new transport technologies promise to bring sustainability benefits. But as this book shows, important lessons are often overlooked because the experiments are not designed to challenge the basic assumptions about established patterns of transport choices. Learning how to organise the process of innovation implementation is essential if the maximum impact is to be achieved - it is here that strategic niche management offers new perspectives. The book uses a series of eight recent experiments with electric vehicles, carsharing schemes, bicycle pools and fleet management to illustrate the means by which technological change must be closely linked to social change if successful implementation is to take place. The basic divide between proponents of technological fixes and those in favour of behavioural change needs to be bridged, perhaps indicating a third way.

From the first motor cars and classic cars to today's supercars and Formula 1, this is the ultimate book about the history of the car. Packed with stunning photography, and featuring more than 2,000 cars, Car shows you how cars have evolved around the world over the the last 130 years, and their impact on society as objects of curiosity, symbols of status and luxury, and items of necessity. Extensive catalogues showcase the most important marques and models, organized in categories such as sports cars, convertibles, and city compacts. The book also features virtual photographic tours of some of the most iconic cars from each era such as the Rolls Royce Silver Ghost, Ford Model T, Lamborghini Countach, and Ferrari F40, while cross-sections of key engines explore the driving force behind them. Lavishly illustrated feature spreads detail the stories of the men, machines, and magic that helped create the car world's most famous marques and made brands such as Porsche, Mercedes-Benz, Aston Martin, and Cadillac household names. If you love cars, then you'll love Car. It is simply a must-have title for all car enthusiasts.

Handbook of Research on Global Competitive Advantage through Innovation and Entrepreneurship Summer Bourne

For the first time, all the most important Latin American economic integration programs are

explored in the same volume in English: the Latin American Integration System (ALADI); MERCOSUR; the Andean Community; the G-3 Accord between Colombia, Venezuela, and Mexico; and the Central American Integration System (SICA). Latin American Trade Agreements explains how all of these sub-regional programs operate and where the opportunities are for foreign direct investors and exporters. It provides concrete examples of companies using the integration projects as part of their strategic business planning for Latin America. It also discusses the many opportunities available in transportation infrastructure development and intra-Latin American logistics. The Appendices include English translations of the trade agreements and important rules and regulations. Latin American Trade Agreements not only focuses on the rules for trade in goods and services, but also examines how the sub-regional projects and each member state treat subjects as diverse as environmental protection, intellectual property rights, foreign direct investment, as well as labor and tax laws. This looseleaf is an asset to lawyers, trade specialists, and international strategic planners.

This book chronicles the divergent growth trends in car production in Belgium and Spain. It delves into how European integration, high wages, and the demise of GM and Ford led to plant closings in Belgium. Next, it investigates how lower wages and the expansion strategies of Western European automakers stimulated expansion in the Spanish auto industry. Finally, it offers three alternate scenarios regarding how further EU expansion and Brexit may potentially reshape the geographic footprint of European car production over the next ten years. In sum, this book utilizes history to help expand the knowledge of scholars and policymakers regarding how European integration and Brexit may impact future auto industry investment for all EU nations.

Cross-border Mobility for Electric Vehicles: Selected results from one of the first cross-border field tests in Europe IGI Global

This e-book details the most interesting and important characteristics of the automobiles, car maintenance, styling features, car body style, the standard classification of the cars, an history of the automobiles, introduction in the automotive industry, and the traffic code, rules and signs. An automobile, usually called a car (an old word for carriage) or a truck, is a wheeled vehicle that carries its own engine. Older terms include horseless carriage and motor car, with "motor" referring to what is now usually called the engine. It has seats for the driver and, almost without exception, for at least one passenger. The automobile was hailed as an environmental improvement over

horses when it was first introduced. Before its introduction, in New York City, over 10,000 tons of manure had to be removed from the streets daily. However, in 2006 the automobile is one of the primary sources of worldwide air pollution and cause of substantial noise and health effects.
