The global economy is enormous--about \$32 trillion per annum--and it is pervasive. Because of mass communication and advanced technology, the global economy affects the output of goods and services of every nation. Gone forever are the days when mighty oceans or mountains allowed any country to isolate itself from the rest of the world. Time zones have been replaced by the 24-hour-a-day stock market. The fate of the South Korean won and the Thai baht is a matter of major concern to the stock markets of Washington, London and Sao Paulo. Today, no nation is an island but a part of a world-wide economic archipelago. Today, because economics is global, politics is becoming global. Furthermore, the globalization of the economy impacts the socio-cultural shape of every nation and people on the face of the earth. From soft drinks to jeans, automobiles to computers, television news to movies, the world is being homogenized, usually in the American image. The film Titanic is playing to standing-room-only crowds in New York City, London and Tokyo. Country singer Garth Brooks is the best-selling singer in history. CNN is the global news network. Cultural blockbusters and superstars are eclipsing smaller, indigenous cultural offerings and entertainers. Is the planet truly becoming Hollywood? Yet, in a world that is changing faster and more dramatically than at any time in history, the family remains the fundamental social unit of every country. How is it faring, economically, socially, spiritually? Beyond debate, the family is being subjected to stresses and strains it has heretofore never known. It is buffeted by China's one-child policy, America's 1.2 million abortions a year, Japan and Western Europe's rapidly aging population, the spreading AIDS epidemic in Africa and Asia, a widening gap between haves and havenots within nations and between nations, and the sharpening conflict between fundamentalists and secularists in many countries. And still most agree that there can be no viable society

without viable families. This volume examines the focus of globalization on politics and society and what can be done to preserve and strengthen the family in a world increasingly indifferent to the age-old virtues of faith, hope, and charity.

Searching For Modern Mexico explains the problems and paradoxes that define the U.S.'s southern neighbor by telling the story behind the coffee, mezcal, avocados, beer, and tacos Mexico produces and exports. Author Nathaniel Parish Flannery, a veteran Latin America analyst and writer, brings readers to the front lines of some of the most fascinating and inaccessible parts of Mexico. The book invites readers into remote, indigenous communities, introduces a range of fascinating characters, and explains the obstacles in front of entrepreneurs trying to build businesses exporting traditional Mexican products. The book provides an unparalleled tour of the chaos and contradictions of Modern Mexico.

Assessing the potential benefits and risks of a currency union Leaders of the fifteen-member Economic Community of West African States (ECOWAS) have set a goal of achieving a monetary and currency union by late 2020. Although some progress has been made toward achieving this ambitious goal, major challenges remain if the region is to realize the necessary macroeconomic convergence and establish the required institutional framework in a relatively short period of time. The proposed union offers many potential benefits, especially for countries with historically high inflation rates and weak central banks. But, as implementation of the euro over the past two decades has shown, folding multiple currencies, representing disparate economies, into a common union comes with significant costs, along with operational challenges and transitional risks. All these potential negatives must be considered carefully by ECOWAS leaders seeking to meet a self-imposed deadline. This book, by two leading experts on economics and Africa, makes a significant analytical contribution to the debates now under way about how ECOWAS could achieve and manage its currency union, and the ramifications for the African continent.

The world economy refers to the global exchange of goods and services, expressed in monetary units. It also means an aggregate of economic measurements of separate countries. The statistical indicators of employment, industries, energy, transport, etc. are significant for understanding global economy. Economic indicators include gross domestic product (GDP) per capita, gross world product, world median income, inflation rate, etc. Estimation of world economic activities is calculated by converting market valuations of a local currency into a single monetary unit with respect to the purchasing power. This textbook picks up individual indicators and explains their need and contribution in the context of a growing world economy. It elucidates the concepts and innovative models around prospective developments in the crucial areas of international trade, economic systems and development. In this book, constant effort has been made to make the understanding of the difficult concepts of world economy as easy and informative as possible, for the readers.

 What are the links between the impact of increasing globalization and the advent of the knowledge economy on the spatial distribution of economic activity? How can we explain the paradox of growing trans-nationalization of the production of goods and services and the tendency for certain kinds of activity--particularly knowledge intensive activities - to be concentrated or clustered in one place? In this changing environment how do firms make decisions about location, and the development and deployment of their distinctive capabilities? These are some of the important questions addressed in this volume by a team of leading international scholars looking at these dynamics in broad scope. The book presents different disciplinary approaches to the knowledge economy viewed from an international perspective, and includes detailed case analysis of its impact in different parts of the world. It moves between the supra- national macro region and the micro cluster, as well as looking at associated infrastructural and policy responses. This is a rich and informative book that attempts to explain some of the key dynamics and characteristics of the new global economy. It will be essential reading for academics in business, economics, geography and political science wanting to get to grips with current thinking and developments.

Introductory comments by Mirza (international business, U. of Bradford, UK) substantiate the suspicion that "globalization" and "regionalization" are indeed ambiguous concepts. In their thrust toward a general theory of gravity to explain this relationship in trade between countries, 29 representatives of academia and transnational corporations (TNCs) address facets of the new global economy: foreign direct investment, other international flows, and the role of governments and TNCs. Beyond a three chapter overview, 16 papers address regionalism in Europe, North America, and Asia. The final piece on integration strategies asks: "MNCs: From multidomestic to global and transnational firms?" Includes 20 figures, 20 tables, and maps of growth zones. Award-winning book showcases case studies uncovering the exploitation of labor and class in the Global South Winner of the 2018 Paul M. Sweezy—Paul A. Baran Memorial Award for original work regarding the political economy of imperialism, Value Chains examines the exploitation of labor in the Global South. Focusing on the issue of labor within global value chains, this book offers a deft empirical analysis of unit labor costs that is closely related to Marx's own theory of exploitation. Value Chains uncovers the concrete processes through which multinational corporations, located primarily in the Global North, capture value from the Global South. We are brought face to face with various state-of-the-art corporate strategies that enforce "economical" and "flexible" production, including labor management methods, aimed to reassert the imperial dominance of the North, while continuing the dependency of the Global South and polarizing the global economy. Case studies of Indonesian suppliers exemplify the growing burden borne by the workers of the Global South, whose labor creates the surplus value that enriches the capitalists

of the North, as well as the secondary capitals of the South.

Today, those who control the value chains and siphon off the profits are primarily financial interests with vast economic and political power—the power that must be broken if the global working class is to liberate itself. Suwandi's book depicts in concrete detail the relations of unequal exchange that structure today's world economy. This study, up-to-date and richly documented, puts labor and class back at the center of our understanding of the world capitalist system.

While franchising promotes economic and social welfare objectives, Elizabeth Crawford Spencer argues that monitoring and regulation are needed to address potential areas of abuse of the form that can result in costly market inefficiencies. This unique study surveys franchise-specific legislation worldwide as a starting point for a thorough examination and analysis of the role of both private and public regulation of the sector in the context of current theoretical approaches to regulating contractual relationships. The book concludes that properly calibrated regulation can minimize inefficient allocations of power and risk and lead to maximum economic and social benefits by promoting the development of small business, enabling the growth of entrepreneurial skills, and facilitating economic well-being and independence among SMEs. This comparative survey will prove to be invaluable for academics in franchising marketing, management, law and practice. The Regulation of Franchising in the New Global Economy will also appeal to franchise law practitioners, consultants, policymakers and those wishing to influence policy on all sides of the debate in the many jurisdictions that are engaging in the processes of adopting, or reviewing, franchise regulation.
