This book includes a layman's guide to high-frequency trading, an unofficial guide to Michael Lewis's Flash Boys: A Wall Street Revolt, and our critique of Lewis's Flash Boys. High-frequency trading (HFT) refers to buying shares and other financial products in huge volumes and at extraordinarily high speeds, and then selling them at a higher price. High-frequency traders, which are also known as HFTs, are not real human beings. HFTs are highly sophisticated computer algorithms, and they operate much faster than a human does. In his book Flash Boys: A Wall Street Revolt, Michael Lewis argues that HFT firms, Wall Street big banks and U.S. stock exchanges are conspiring to rig the market against non-HFT investors. He argues that the stock market is being manipulated in favor of insiders who have made many billions of dollars by exploiting computerized trading. In our book, we aim to investigate Lewis's argument that finance is not a clean game, but rather a device for drawing revenue for the very rich one percent.

What is Penny stocks ? Penny Stocks are those which trade at very low price and has a low market capitalization. While there is no simple definition, penny stocks in India generally trade at Rs 0.05 to Rs 10 per share. Individuals invest in these penny stocks and lose money as their share price is highly fluctuating. Pennystocking-that's what you're all here for, right? So what is pennystocking? Well, pennystocking is the game of trading penny stocks-or, stocks trading under \$5 dollars a share-in pursuit of profits. Forget value investing where you buy positions in strong companies and hold them for the long-term. Pennystocking is all about riding the waves of penny stock price moments. The better you learn to surf these waves, the better your profits will be. Read this paragraph over and over again. This is very important. This isn't investing-this is a game, and you have to look at it like a game. How do you learn the game? In my experience, the real

reason why most traders lose money - and 90% of all traders will eventually lose money - is that they don't consider all the variables. You can't afford to make that mistake. You have to understand how Wall Street and all the characters involved work in order to adapt to change. The individual players and the stocks may change, but Wall Street never changes.
