Ham Radio is Alive and Well, is packed full of useful information for both new radio amateurs as well as members of the Quarter Century Club. Anyone interested in amateur radio who reads this book is guaranteed to learn something new. This read ranks right up there with so many of the ARRL (American Radio Relay League) books and publications. If you enjoyed reading 200 Meters & Down, or The World of Ham Radio, 1901-1950, you will be fascinated with this text. Gary writes as if he is having a conversation with you over a cup of coffee while he explains many lesser-understood topics in such a manner that anyone can understand them. He shares what he has learned in recent years, and explains how ham radio has evolved and lived on amidst smartphones, PCs, and the Internet. The hobby is not dying but instead thriving and actually GROWING! Gary talks about "traditional" ham radio; the stuff hams did and continue to do using HF radios, antenna tuners, wire and/or beam antennas, working DX, QSLing, and contesting. It is about what he remembers from the past, and what is currently happening in the field of ham radio today. You will find bits and pieces of history as well as a little humor blended among many of the various subjects. This transcript is a must read for any inactive radio amateur and the licensee who wants to learn a little bit more than he already knows about this magnificent hobby. As Tim Duffy, K3LR, COO of DX Engineering, wrote in his forward of the book, "Whether you are a long time Ham Radio enthusiast or just getting started, you will find this book hard to put down."

Personal Radio Service Reform (US Federal Communications Commission Regulation) (FCC) (2018 Edition) The Law Library presents the complete text of the Personal Radio Service Reform (US Federal Communications Commission Regulation) (FCC) (2018 Edition). Updated as of May 29, 2018 The Federal Communications Commission (Commission) adopted a comprehensive

reorganization of and update to the rules governing the Personal Radio Services (PRS). PRS provides for a wide variety of wireless devices that are used by the general public for personal communication uses, which include applications like walkie-talkies, radio controlled model toys, Personal Locator Beacons (PLBs), medical implant devices and other uses. In addition to the comprehensive review and update of the rules to reflect modern practices, the Commission enhanced the General Mobile Radio Service (GMRS) to allow new digital applications, allot additional interstitial channels and extend the license term from five to ten years. It also allotted additional channels to the Family Radio Service (FRS) and increased the power on certain FRS channels from 0.5 Watts to two Watts. It also updated the CB Radio Service to allow hands-free headsets, removed a restriction on communicating over long distances and removed other outdated requirements. These changes and others outlined below will update PRS rules to be more in line with current public demands for the services and will make the rules easier to read and find information, while also removing outdated requirements and removing unnecessary rules. history, fifteen sections explore the equipment used to send messages over long distances.

Featured are code readers, oscillators, Morse trainers, electronic keyers, single- and dual-lever paddles, portable paddles, automatic mechanical keys, accessories, and more. Each device is presented in text and images, some with classic advertisements; this combination allows the reader to appreciate device development and better understand the thinking that went into the design. Paddle and key maintenance and adjustment are also examined, as well as computer interfacing and use of the Internet. The book also includes the results of patent studies and historical research, with many new findings presented, making it a must-have for collectors, ham operators, or anyone interested in the history of these communication devices.
