The Production and Thermal Utilization of Biomass Pellets

School Leadership for Democratic Education in South Africa Perspectives, Achievements and Future Challenges Post-Apartheid

"This book is an exceptional introduction to some difficult ideas. It is full of downright good advice for every academic who wants to do something practical to improve his or hers students' learning." Paul Ramsden, Brisbane, Australia "Biggs and Tang present a unified view of university teaching that is both grounded in research and theory and replete with guidance for novice and expert instructors. The book will inspire, challenge, unsettle, and in places annoy and even infuriate its readers, but it will succeed in helping them think about how high quality teaching can contribute to high quality learning." John Kirby, Queens University, Ontario, Canada This best-selling book explains the concept of constructive alignment used in implementing outcomes-based education. Constructive alignment identifies the desired learning outcomes and helps teachers design the teaching and learning activities that will help students to achieve those outcomes, and to assess how well those outcomes have been achieved. Each chapter includes tasks that offer a 'how-to' manual to implement constructive alignment in your own teaching practices. This new edition draws on the authors' experience of consulting on the implementation of constructive alignment in Australia, Hong Kong, Ireland and Malaysia including a wider range of disciplines and teaching contexts. There is also a new section on the evaluation of constructive alignment, which is now used worldwide as a framework for good teaching and assessment, as it has been shown to: Assist university teachers who wish to improve the quality of their own teaching, their students' learning and their assessment of learning outcomes Aid staff developers in providing support for departments in line with institutional policies Provide a framework for administrators interested in quality assurance and enhancement of teaching across the whole

university. The authors have also included useful web links to further material. Teaching for Quality Learning at University will be of particular interest to teachers, staff developers and administrators.

The Structure of Schooling Routledge

School Leadership for Democratic Education in South Africa explores the democratization and modernization of education in South Africa, analyzing the state of school leadership in South African schools from the time of the new democratic education dispensation in 1994 to the present day. The book maps out what the future of education in South Africa could look like and explores the most conducive educational environments for change in South African schools. It adopts a critical approach to analyzing leadership and management in the context of school governance, school effectiveness, teacher development, multiculturalism and equity in education. Contributions explore the democratization and modernization of education in South Africa through examining different perspectives, achievements and challenges, and also consider issues around access to technology, language policy and the curriculum along with new literature on selected aspects of leadership. This book will be of great interest for researchers, scholars, and students in the fields of educational leadership, sociology of education, and teacher education.

In *Teaching History for the Common Good*, Barton and Levstik present a clear overview of competing ideas among educators, historians, politicians, and the public about the nature and purpose of teaching history, and they evaluate these debates in light of current research on students' historical thinking. In many cases, disagreements about what should be taught to the nation's children and how it should be presented reflect fundamental differences that will not easily be resolved. A central premise of this book, though, is that systematic theory and research can play an important role in such debates by providing evidence of how students think, how their ideas interact with the information they encounter both in school and out, and how these ideas differ across contexts. Such evidence is needed as an alternative to the untested assumptions that plague so many discussions of history education. The authors review research on students' historical thinking and set it in the theoretical context of mediated action--an approach that calls attention to the concrete actions that people undertake, the human agents responsible for such actions, the cultural tools that aid and constrain them, their purposes, and their social contexts. They explain how this theory allows educators to address the breadth of practices, settings, purposes, and tools that influence students' developing understanding of the past, as well as how it provides an alternative to the academic discipline of history as a way of making decisions about teaching and learning the subject in schools. Beyond simply describing the factors that influence students' thinking, Barton and Levstik evaluate their implications for historical understanding and civic engagement. They base these evaluations not on the disciplinary study of history, but on the purpose of social education--preparing students for participation in a pluralist democracy. Their ultimate concern is how history can help citizens engage in collaboration toward the common good. In *Teaching History for the Common Good*, Barton and Levstik: *discuss the contribution of theory and

research, explain the theory of mediated action and how it guides their analysis, and describe research on children's (and adults') knowledge of and interest in history; *lay out a vision of pluralist, participatory democracy and its relationship to the humanistic study of history as a basis for evaluating the perspectives on the past that influence students' learning; *explore four principal "stances" toward history (identification, analysis, moral response, and exhibition), review research on the extent to which children and adolescents understand and accept each of these, and examine how the stances might contribute to--or detract from-- participation in a pluralist democracy; *address six of the principal "tools" of history (narrative structure, stories of individual achievement and motivation, national narratives, inquiry, empathy as perspective-taking, and empathy as caring); and *review research and conventional wisdom on teachers' knowledge and practice, and argue that for teachers to embrace investigative, multi-perspectival approaches to history they need more than knowledge of content and pedagogy, they need a guiding purpose that can be fulfilled only by these approaches-- and preparation for participatory democracy provides such purpose. Teaching History for the Common Good is essential reading for history and social studies professionals, researchers, teacher educators, and students, as well as for policymakers, parents, and members of the general public who are interested in history education or in students' thinking and learning about the subject.

This book is a collection of chapters based on original research dealing with issues of discipline and disciplinary practices in educational institutions. The aim of the book is to provide a scholarly and scientific perspective on the current state of discipline and disciplinary practices in schools and tertiary education settings. The issue of discipline is investigated from diverse paradigmatic and methodological perspectives, presenting empirical as well as also philosophical research. The empirical perspective includes quantitative (positivistic), qualitative (interpretive) and mixed methods (pragmatic), designs and worldviews. This book offers a ground-breaking contribution to the field of learner and student discipline, with insights into disciplinary practices and issues in educational institutions not hitherto researched, such as Technical Vocational Education and

Training colleges and universities.

I'm your protagonist-Reshma Kapoor-and if you have the free time to read this book, then you're probably nothing like me. Reshma is a college counselor's dream. She's the top-ranked senior at her ultra-competitive Silicon Valley high school, with a spotless academic record and a long roster of extracurriculars. But there are plenty of perfect students in the country, and if Reshma wants to get into Stanford, and into med school after that, she needs the hook to beat them all. What's a habitual over-achiever to do? Land herself a literary agent, of course. Which is exactly what Reshma does after agent Linda Montrose spots an article she wrote for Huffington Post. Linda wants to represent Reshma, and, with her new agent's help scoring a book deal, Reshma knows she'll finally have the key to Stanford. But she's convinced no one would want to read a novel about a study machine like her. To make herself a more relatable protagonist, she must start doing all the regular American girl stuff she normally ignores. For starters, she has to make a friend, then get a boyfriend. And she's already planned the perfect ending: after struggling for three hundred pages with her own perfectionism, Reshma will learn that meaningful relationships can be more important than success-a character arc librarians and critics alike will enjoy. Of course, even with a mastermind like Reshma in charge, things can't always go as planned. And when the valedictorian spot begins to slip from her grasp, she'll have to decide just how far she'll go for that satisfying ending. (Note: It's pretty far.) In this wholly unique, wickedly funny debut novel, Rahul Kanakia consciously uses the rules of storytelling-and then breaks them to pieces.

Every once in a while, with the passage of time, a classic book takes on even greater relevance. The first edition of Democratic Schools was praised by legions of education professionals for showing how to create schools and classrooms with democratic values in mind; it was hailed for its clear-eyed assessment of the important role schools continue to play in promoting democracy, its traditions, and its thinking. Now an expanded and updated edition of Democratic Schools arrives, increasingly relevant in a time of inequitable accountability-based reform, standardized assessments, and cookie-cutter curricula. Michael Apple and James Beane return to challenge reform movements such as No Child Left Behind by asserting that our schools have a vital and historic connection to the continued success of our democratic way of life. Democratic Schools, Second Edition, shows in detail how educators can make a lasting difference by combining authentic, important lessons and a consistent, building- or system-wide focus on a critical and democratic education. Apple and Beane once more convene seven of America's most creative democratic educators for a powerful conversation about how to build an education that is worthy of our highest ideals. The essays that made the first edition so potent are here in their entirety, each followed by brand-new retrospective insight from their writers, educators who have proven that teachers and administrators can bring the nation's most noble values to life

every day. Contributors include: Michael W. Apple James A. Beane Bob Peterson Brian D. Schultz Barbara L. Brodhagen Larry Rosenstock Adria Steinberg Deborah Meier Paul Schwarz. Grounded in a robust understanding of democracy, education, and the exigencies of our political and social systems, the second edition of *Democratic Schools* goes beyond updating and expanding the stories of the schools it originally chronicled. It adds new material - including a brand new chapter from Apple and Beane - that provides crucial lessons for creating and sustaining democratic schools, and that once again inspires teachers, administrators, and educational leaders to adopt ways of framing their mission that can create and sustain our democratic way of life - even in these difficult times.

The authors have focused this book on the serious, beginning, qualitative researcher - theoretically rigorous, yet with an understandable perspective.; The book has three main features. First, it provides a strong theoretical base for the understanding of competing research paradigms. Secondly, it features a "methods" section consistent with the non-linear nature of naturalistic inquiry, yet it allows the beginner to see direction. Thirdly, the authors include examples of actual research studies conducted (and completed) in a single year.

There has been a growing interest in the notion of a scholarship of teaching. Such scholarship is displayed through a teacher's grasp of, and response to, the relationships between knowledge of content, teaching and learning in ways that attest to practice as being complex and interwoven. Yet attempting to capture teachers' professional knowledge is difficult because the critical links between practice and knowledge, for many teachers, is tacit. *White Paper on Arts, Culture, and Heritage* Department of Land Affairs
