Focusing on events in Rwanda, Armenia, and the former Yugoslavia as well as the Holocaust, *Genocide and Gender in the Twentieth Century* investigates how historically- and culturally-specific ideas led to genocidal sexual violence. Expert contributors also consider how these ideas, in conjunction with issues relating to femininity, masculinity and understandings of gendered identities, contributed to perpetrators' tools and strategies for ethnic cleansing and genocide. The 2nd edition features: * Five brand new chapters which explore: imperialism, race, gender and genocide; the Cambodian genocide; memory and intergenerational transmission of Holocaust trauma; and genocide, gender and memory in the Armenian case. * An extended and enhanced introduction which makes use of recent scholarship on gender and violence. * Historiographical and bibliographical updates throughout. * Key primary document - excerpt from the 1948 UN Convention on the Prevention and Punishment of Genocide. INTRODUCTION TO STATISTICAL QUALITY CONTROL. Springer
 Anne Marie Stanhope, a young American woman – motherless since the age of three – is summoned to Mexico City by her estranged father, Chesterton Stanhope, where she has been promised in marriage to Frederick Von Alt, the son of her father’s business partner. As it is 1910 and women were not equipped to independently earn a living, Anne Marie dutifully arrives in the capital, although she is frustrated by her father’s hesitancy to formally introduce her to her future husband. Disconcerted by her inability to speak the Spanish language, her father engages a tutor, Miguel Ruiz, -- an affluent sophisticate whose politics are in direct opposition of his social stature. Enamored by Miguel Ruiz, although betrothed to Frederick, Anne Marie eventually learns that she has actually been brought to Mexico for another purpose, and she does not want part of it. Eluding her father, she accidentally finds herself sheltered in a house of prostitution under the protection of a kind madame who is acquainted with her father and Miguel Ruiz. The Revolution commences and circumstances lead the tutor to the madame’s house where he enlists her assistance in helping Anne Marie escape the fate planned by her father. An insurgent attacks have escalated, the tutor agrees to accompany Anne Marie to a home in Cuernavaca owned by a trusted friend of the madame. While there, Anne Marie ultimately learns the truth about her mother’s untimely death from a former contact of her father and comes to realize that she has only one person on whom she can truly rely: Miguel Ruiz. A proponent of the poor and landless peasants, Miguel is commissioned by an old friend to plan strategies for insurgents operating in the northern part of Mexico. After he and Anne Marie trek north, Miguel learns that he will be involved in planning strategies and raids not only for his compatriot, but also for one of Mexico’s most infamous desperados, Francisco Pancho Villa. Now lovers and committed to each other, Anne Marie blindly accepts

Miquel’s calling. Eventually, she is presented with a young Indian maid recued in one of Villa’s raids. Unaware of the pillaging, raping and shooting that Villa and his men have been conducting in the name of freedom and justice, she is inadvertently exposed to Villa’s devastation while seeking medical attention at another village. Pleading with Miquel to stop this carnage, he passionately convinces her that he is only planning strategies. Perceiving the intensity of his fervor, Anne Marie realizes that she cannot dissuade Miquel. After overhearing his plans for a raid by Villa’s men on a nearby hacienda, now under the charge of an American Army major assisting the Mexican government in its attempt to diffuse and quell insurgent uprisings, Anne Marie is torn between her loyalty to Miquel and to a United States citizen in imminent danger of attack and death by Villa’s insurgents. She decides to help the Army major and sends word to the village via her maid. Her decision led to an unexpected consequence and changed her life forever.

Mobility is fundamental to economic and social activities such as commuting, manufacturing, or supplying energy. Each movement has an origin, a potential set of intermediate locations, a destination, and a nature which is linked with geographical attributes. Transport systems composed of infrastructures, modes and terminals are so embedded in the socio-economic life of individuals, institutions and corporations that they are often invisible to the consumer. This is paradoxical as the perceived invisibility of transportation is derived from its efficiency. Understanding how mobility is linked with geography is main the purpose of this book. The third edition of *The Geography of Transport Systems* has been revised and updated to provide an overview of the spatial aspects of transportation. This text provides greater discussion of security, energy, green logistics, as well as new and updated case studies, a revised content structure, and new figures. Each chapter covers a specific conceptual dimension including networks, modes, terminals, freight transportation, urban transportation and environmental impacts. A final chapter contains core methodologies linked with transport geography such as accessibility, spatial interactions, graph theory and Geographic Information Systems for transportation (GIS-T). This book provides a comprehensive and accessible introduction to the field, with a broad overview of its

concepts, methods, and areas of application. The accompanying website for this text contains a useful additional material, including digital maps, PowerPoint slides, databases, and links to further reading and websites. The website can be accessed at: <http://people.hofstra.edu/geotrans> This text is an essential resource for undergraduates studying transport geography, as well as those interest in economic and urban geography, transport planning and engineering.

The transport sector continues to shift towards alternative powertrains, particularly with the UK Government’s announcement to end the sale of petrol and diesel passenger cars by 2030 and increasing support for alternatives. Despite this announcement, the internal combustion continues to play a significant role both in the passenger car market through the use of hybrids and sustainable low carbon fuels, as well as a key role in other sectors such as heavy-duty vehicles and off-highway applications across the globe. Building on the industry-leading IC Engines conference, the 2021 Powertrain Systems for Net-Zero Transport conference (7-8 December 2021, London, UK) focussed on the internal combustion engine’s role in Net-Zero transport as well as covered developments in the wide range of propulsion systems available (electric, fuel cell, sustainable fuels etc) and their associated powertrains. To achieve the net-zero transport across the globe, the life-cycle analysis of future powertrain and energy was also discussed. Powertrain Systems for Net-Zero Transport provided a forum for engine, fuels, e-machine, fuel cell and powertrain experts to look closely at developments in powertrain technology required, to meet the demands of the net-zero future and global competition in all sectors of the road

transportation, off-highway and stationary power industries.

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of

alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the 2017-2025 CAFE standards.
