Grades

American Bar Association In the 1950s, East Central Florida underwent a vast transformation with the creation of the American space program. The sleepy fishing communities stretching from Titusville to Melbourne became home to an army of

engineers, rocket scientists, and technicians who would soon take Florida and the nation into the missile age. With no opportunities for advanced study nearby, a handful of determined men and women launched Brevard Engineering College in 1958. In 1966, Florida's secretary of state approved the college's petition to change its name to Florida Institute of

Technology. In its short history, Florida Tech has overcome formidable hurdles and succeeded in winning a place in the top ranks of scientific and technological universities. A college on the rise, Florida Tech has not only a bright future, but a rich and colorful history that has been captured in striking photographs. The exciting story of "Countdown College"-from the lift-off of Bumper 8 in

1950, which launched the space program in Florida, to the most recent high-tech additions to campus facilities-is the subject of this captivating new pictorial history.

Despite increases in college enrollment nationally, student postsecondary outcome data are less impressive.

Among the root causes identified in the research as contributing to prolonged time-to-degree and low graduation rates lies a core problem: students are un- or under-prepared for college. College completion data also speak towards an undercurrent of inequality, as the higher education sector remains stratified along racial and socioeconomic

lines. This study centered on the interrelationships between multiple "college readiness" factors and the complex process by which they collectively influenced college success. While the construct of college readiness tends to be conceived as a conglomerate of abilities and knowledge that are universally needed by all students, I strove to explore the

ways predictors of postsecondary success vary by student group (i.e., sex and race) and field of study. In this study, I sought to unpack college readiness through the investigation of the interrelationships between the contexts, dispositions, and habits of incoming first-time freshmen (FTF) and their long-term postsecondary outcomes. As I investigated multiple independent and

dependent variables, I employed structural equation modeling (SEM). SEM was particularly well suited to the exploration of this complex phenomenon as it allowed me to specify a number of measurement models - each with multiple indicators - in my analysis of variable relationships, which cannot be performed through traditional regression analysis. To achieve my study aims, I

<p>partnered with California State University, Long Beach (CSULB), and utilized a dataset for the Fall 2008 incoming FTF cohort (N = 1793). Data culled from the students' responses on the Cooperative Institutional Research Program Freshman Survey were merged with postsecondary outcome variables to allow for a longitudinal analysis of students' multiple-year</p>	<p>trajectories at the University. Overall, among the 2008 FTF cohort at CSULB, contextual affordances of students' pre-college environments (i.e., their communities, schools, and families) exerted influence on their academic and standardized test performance in high school. In addition to the impacts of context, the frequency with which students engaged in productive</p>	<p>habits of mind positively influenced their high school performance. In turn, traditional academic preparedness metrics impacted students' formation of their academic self-efficacy as well as their expectations of future performance in college. While academic self-efficacy ratings and performance expectations were relatively high for this incoming cohort, these</p>
---	--	---

factors were not significant predictors of students' eventual postsecondary performance and culmination. Instead, measures of academic preparedness appeared to be the most salient. Furthermore, an investigation of these interrelationships across student groups (i.e., sex, race, and major) revealed both commonality and divergence; however, further

analysis should be conducted to parcel out the ways college readiness takes shape at the nexus of sex, race, and major. Ultimately, findings from this study can provide K-12 and higher education institutions (particularly large, public four-year universities) a more nuanced understanding of the complex inner workings of college readiness indicators and their varying impacts on students'

postsecondary success. These findings can also empower educators in their efforts to more seamlessly prepare and support students as they progress along the K-16 continuum, so students are better positioned to succeed in college. *Blueprint for College Readiness* Jossey-Bass Incorporated Pub The purpose of this sequential explanatory case study was to explore

the impact of the North Carolina High School to Community College Articulation Agreement on student motivation to (a) perform well in the course as defined by the State of North Carolina award of college credit, (b) graduate high school, (c) pursue college or postsecondary training in course content, and (d) select a career in the course field. The study utilized quantitative data collected through student surveys then triangulated qualitative student focus group and teacher focus group interview data in order to establish statistical themes for narrative analysis. The research focused on Career and Technical Education courses in the concentration of Business Information Technology at a rural high school, Grades 9 through 12, located in the piedmont region of North Carolina. The condition of the school caused school leaders to focus attention on academic programs in order to increase student achievement. Data compiled from North Carolina Department of Public Instruction's report cards, national illiteracy statistics, and national, state, and local dropout rates were utilized in order to justify the study's

purpose. In addition, the school's faculty expressed concerns that students consistently lacked motivation. The conditions of the targeted school warranted the exploration of the North Carolina High School to Community College Articulation Agreement in order to increase student achievement through a new approach. The results from the study led the researcher to conclude that the opportunities provided by the North Carolina High School to Community College Articulation Agreement had positive effects on student motivation by stimulating the student participants' thought processes toward improvement of grades, graduating high school, pursuing college or postsecondary training, and thinking about career fields. The researcher's recommendation was for the school improvement team to research, analyze, and implement a plan of action that will educate, monitor, and facilitate the earning of college credits via the North Carolina High School to Community College Articulation Agreement.. ease the college application process in its whole. As a one-stop-trip, the book covers each step of the college application process including essay writing, scholarship finding, filling out applications, preparation for interviews, and much more. Each writer also shares their testimonies, mistakes, supplemental essays, and overall journey in their process. There is no

one way to apply to college and the writers' various paths hope to not only show, but embrace the diversity when applying. Verified by college counselor. / About the Authors: Steven Li was born in Sioux Falls, South Dakota but raised in Chicago, Illinois with a family of immigrants from China. His parents' sacrifice to provide him a life in the United States has fueled his passion for

entrepreneurs hip, an opportunity to express his ideas and projects into the real world. In high school, he was the Intern President of the Economic Awareness Council of On the Money Magazine and environmental researcher winning Illinois awards. His involvement within the community has helped him combine his passions of entrepreneurs hip and youth impact. He is enrolled at Stanford University

studying Management Science & Engineering. / Sebastian Duque was born in Pereira, Colombia, and immigrated to the United States when he was 6 years old. Since then, he has lived in Kendall, a suburb of Miami, Florida. Inspired by his parent's sacrifices, Sebastian worked to succeed throughout high school and was president of the Science National Honor Society chapter as well as the secretary of the International Thespian Honor Society. He is also a regional Science Bowl champion and he has been recognized by the National Hispanic Recognition program. In the future, he hopes to combine his love of science with his love for politics and public relations to study environmental policy. As of now, Sebastian is enrolled at Yale University as an Environmental Studies major. / Santiago Alvillar was born and raised in El Monte, California: a Hispanic community on the outskirts of East Los Angeles. He is the youngest of three sons and comes from an Indigenous, Southern Mexican, immigrant household. He has gained multiple national titles including Gates Scholar, Coca-Cola Scholar,

Edison STEM Scholar, National Horatio Alger Association Scholar, and Elks Top Male Winner; Santiago has been recognized regionally and interviewed by LA news stations. Currently, he's enrolled at Stanford University hoping to graduate with a Bachelor's and Master's degree in Engineering Physics. / Narvella is a first-generation American, born to a family of

Ghanaian immigrants. Narvella was born in Chicago, Illinois but was raised in Montgomery, Illinois. Narvella is enrolled at the University of Chicago, studying Global Health/Global Studies on the pre-medical track. In high school, she served as the President of National Honors Society, Student Council, and Medical Club. As Narvella continues to pursue her goals, she

hopes to inspire other Black girls, and people from all backgrounds, to continue to give back to their communities, appreciate education, and to shoot for their goals no matter how far away they seem. / Dayanna Salas was born in Guayaquil, Ecuador but immigrated to the United States at the age of 6 to live in Chicago, Illinois. Her immigration story have fueled her passion to be

involved in Ecuadorians politics and she hopes to make positive contributions to her country in the future. Her mixed-race background has sparked an interest in the representation and intersectionality of different identities. She is currently enrolled in the University of Pennsylvania planning to study international relations and economics. [An Analysis of Institutional Trends Over Two Decades](#)

Harvard Education Press The Education Commission of the States launched the Blueprint for College Readiness initiative to provide guidance and support to the growing number of states working to improve student success and transition from high school into postsecondary . Designed by state leaders for state leaders, the Blueprint features a menu of 10 critical policies

promoting college readiness and success. This 50-state analysis explores the extent to which states are pursuing these policies. The accompanying resources, technical assistance and online database are designed to respond to the unique needs of states. The Blueprint is designed to serve as a framework to help K-12 and higher education leaders conceptualize the multitude

of education reform efforts underway in their states. The analysis includes four high school policies, four postsecondary policies and two "bridge" policies that impact both stakeholders. Collectively, the 10 policies described in the Blueprint enable states to bring together college and career readiness, transition and degree attainment goals. The second section of the report contains

individual state profiles as a way for leaders to quickly discern where strengths and opportunities exist and where they can get more information and resources should they decide to take action. Finally, a 50-state searchable data portal will provide an array of content-rich, easy-to-understand features.

General Education Today

Educational Testing Serv
The decision of whether to

go to college, or where, is hampered by poor information and inadequate understanding of the financial risk involved. Adding to the confusion, the same degree can cost dramatically different amounts for different people. A barrage of advertising offers new degrees designed to lead to specific jobs, but we see no information on whether graduates ever get those

jobs. Mix in a frenzied applications process, and pressure from politicians for "relevant" programs, and there is an urgent need to separate myth from reality. Peter Cappelli, an acclaimed expert in employment trends, the workforce, and education, provides hard evidence that counters conventional wisdom and helps us make cost-effective choices. Among the issues Cappelli analyzes are:

What is the real link between a college degree and a job that enables you to pay off the cost of college, especially in a market that is in constant change? Why it may be a mistake to pursue degrees that will land you the hottest jobs because what is hot today is unlikely to be so by the time you graduate. Why the most expensive colleges may actually be the cheapest because of their ability to

graduate students on time. How parents and students can find out what different colleges actually deliver to students and whether it is something that employers really want. College is the biggest expense for many families, larger even than the cost of the family home, and one that can bankrupt students and their parents if it works out poorly. Peter Cappelli offers vital insight

for parents and students to make decisions that both make sense financially and provide the foundation that will help students make their way in the world.

An Analysis of the Effect of the High School Curriculum Upon College Achievement

Arcadia Publishing
The purpose of this study was to examine academic and social experiences of students who participated in

a two-year intensive dual enrollment program housed on a community college campus. The academic experiences were examined through an analysis of community college and university data for 275 dually enrolled students and a comparison group of 258 traditional community college transfer students. An independent test of means was used to compare dual enrollment

students to traditional community college transfer students. The findings were significant and found that dually enrolled students had higher community college GPAs, higher associate's and bachelor's degree completion rates, and shorter time periods to associate's degree completion. The social experiences were examined through the use of a survey from

93 students who participated in the intensive dual enrollment program. Repeated measures of analysis of variance (ANOVA) were used to examine the students' experiences while participating in the dual enrollment program compared to their regular high school and compared to the university. The analysis revealed that the dually enrolled students had significantly higher ratings of overall satisfaction with the dual enrollment program and better quality ratings for relationships with students, faculty, and administration while participating in the dual enrollment program, compared to their experiences while at the high school and university. Qualitative analysis of open-ended survey questions revealed that the dually enrolled students typically missed their friends and extracurricular activities of their regular high school, but many positive aspects of the dual enrollment experience made up for "missing out" on a traditional high school experience. Initially, students opted to participate in dual enrollment in order to get a free head start on college. Many survey

respondents indicated that the small size of the program was crucial to their success by providing a close-knit family environment. Recommendations are provided for policymakers to support dual enrollment programs and for high school, community college, and university advisors to provide guidance to address the unique concerns of dual enrollment

students. City School Surveys SAGE Publications The past decade has seen increased attention to cost-effectiveness and benefit-cost analysis in education as administrators are being asked to accomplish more with the same or even fewer resources, philanthropists are keen to calculate their “return on investment” in social programs, and the general public is

increasingly scrutinizing how resources are allocated to schools and colleges. Economic Evaluation in Education: Cost-Effectiveness and Benefit-Cost Analysis (titled Cost-Effectiveness Analysis: Methods and Applications in its previous editions) is the only full-length book to provide readers with the step-by-step methods they need to plan and implement a benefit-cost analysis in education.

Authors Henry M. Levin, Patrick J. McEwan, Clive Belfield, Alyshia Brooks Bowden, and Robert Shand examine a range of issues, including how to identify, measure, and distribute costs; how to measure effectiveness, utility, and benefits; and how to incorporate cost evaluations into the decision-making process. The Third Edition reflects the considerable

methodological development in the evaluation literature, and the greater empiricism practiced by education researchers, to help readers learn to apply more advanced methods to their own analyses.

An Analysis of Academic Reputation and Educational Quality as Perceived by Consumers of Higher Education

Brookings Institution Press
The most crucial choice

a high school graduate makes is whether to attend college or to go to work. Here is the most sophisticated study of the complexities behind that decision. Based on a unique data set of nearly 23,000 seniors from more than 1,300 high schools who were tracked over several years, the book treats the following questions in detail: Who goes to college? Does low family income

prevent some young people from enrolling, or does scholarship aid offset financial need? How important are scholastic aptitude scores, high school class rank, race, and socioeconomic background in determining college applications and admissions? Do test scores predict success in higher education? Using the data from the National Longitudinal Study of the Class of 1972, the authors present a set of interrelated analyses of student and institutional behavior, each focused on a particular aspect of the process of choosing and being chosen by a college. Among their interesting findings: most high school graduates would be admitted to some four-year college of average quality, were they to apply; applicants do not necessarily prefer the highest-quality school; high school class rank and SAT scores are equally important in college admissions; federal scholarship aid has had only a small effect on enrollments at four-year colleges but a much stronger effect on attendance at two-year colleges; the attention paid to SAT scores in admissions is commensurate with the power of the scores in predicting persistence to a degree. This

clearly written book is an important source of information on a perpetually interesting topic.

An Analysis of High School Senior and Community College Students' Perceptions of California Non-metropolitan Community College
s Harvard University Press

This is a descriptive analysis of the results of a multi-method research study which utilized both qualitative

and quantitative techniques to study the student culture at Saint Leo College. The work describes the college student culture in detail: its mores and customs; its beliefs, values and attitudes; its pattern of daily life; its developmental phases; and the interpersonal relationships among members of the culture. *College Choice in America* Market-based school reform

incentivizes schools to invest in the academic preparation and well-being of students. These imperatives, often articulated in terms of safety and the college preparation of students, are seen as issues traditional public schools have been unable to address adequately. In turn, alternative programs and schools of choice are positioned as viable solutions. Using critical

ethnography methodology, this dissertation is based on a case study analysis of one such schooling site, and investigates to what extent this method of "new schooling" might, in fact, offer something different from traditional public schools. Further, my analysis asks to what extent this case of market-based school reform schooling counters deficit paradigms so often

associated with the education of low-income youth of color, as this remains unclear in the literature. Drawing from sociopolitical and organizational behavior theory, I use a proactive versus reactive institutional framework in this analysis, finding that this case of alternative programs and schools of choice reflects a reactive position in which communities and schools

are seen as the problem. I argue that this suggests a failure of market-based schooling to offer a unique counter-solution to traditional schooling for low-income youth of color. Through this analysis, I also identify missed opportunities to take a more proactive position in relation to both students and communities, which would likely better assure the well-being of youth of color as well as

offer a clearer solution to the failure of traditional schools to advance safety and college-readiness for all.

An Analysis and Synthesis of Elements of Maryland School and College Law
Practical solutions for improving higher education opportunities for disadvantaged students Too many disadvantaged college students in America do not complete their

coursework or receive any college credential, while others earn degrees or certificates with little labor market value. Large numbers of these students also struggle to pay for college, and some incur debts that they have difficulty repaying. The authors provide a new review of the causes of these problems and offer promising policy solutions. The circumstances affecting

disadvantaged students stem both from issues on the individual side, such as weak academic preparation and financial pressures, and from institutional failures. Low-income students disproportionately attend schools that are underfunded and have weak performance incentives, contributing to unsatisfactory outcomes for many students. Some solutions,

including better financial aid or academic supports, target individual students. Other solutions, such as stronger linkages between coursework and the labor market and more structured paths through the curriculum, are aimed at institutional reforms. All students, and particularly those from disadvantaged backgrounds, also need better and

varied pathways both to college and directly to the job market, beginning in high school. We can improve college outcomes, but must also acknowledge that we must make hard choices and face difficult tradeoffs in the process. While no single policy is guaranteed to greatly improve college and career outcomes, implementing a number of evidence-based policies and programs

together has the potential to improve these outcomes substantially. *A COMPARATIVE ANALYSIS OF HIGH SCHOOL NON-GRADUATES AND NON-COLLEGE BOUND GRADUATES.* This is a book by several charter school advocates taking stock of the past, present, and future of the charter movement.-- *A Guide to the Most Important Financial Decision You'll Ever Make*

An Analysis of the School College Orientation Program in Pittsburgh, Pennsylvania National Center for Education Statistics Analysis Report High School and Beyond : College Students who Work: 1980-1984 Analysis Findings from High School and Beyond College and School Law Analysis, Prevention, and Forms American Bar Association
A Field Guide for

School and District Leaders
Using standpoint framework this study explores first-hand experiences and reflections of university students with ADHD who received accommodations and services for at least one academic year while in high school. This qualitative research focuses on participants' beliefs of whether interventions they received during high

school adequately prepared them to be academically successful for college. Five students (2 females and 3 males) participated in a 60-minute interview consisting of 24 questions that explore participants' feelings of academic preparedness for college based on their high school accommodations. Findings support previous research that college students with ADHD often struggle

academically once they transition into college until they received their "wake up call." Even though, participants were satisfied with their accommodations in high school, they initially felt unprepared and struggled to adjust academically

in college. Significantly, participants who reported partaking in extracurricular activities and/or leadership roles in high school felt more confident in their academic skills, reported better social adjustment, and achieved higher grade

point averages in college than their counterparts who did not participate in such activities and/or roles.
