Ui Design With  
Xml  
The basic  
unit of android  
application is  
the activity. A  
UI is defined

in an xml file.  
During  
compilation,  
each element  
in the XML is  
compiled into  
equivalent  
Android GUI  
class with  
attributes  
represented  
by methods.  
View and  
ViewGroups.  
An activity is  
consist of  
views. A view  
is just a  
widget that  
appears on  
the screen. It  
could be  
button  
e.t.c.

## **Android Development**

### **t Tutorials | Designing UI with XML in Android | GeeksforGeeks**

Android user interfaces can be created declaratively by using XML files or programmatically by writing code. The Xamarin.Android Designer allows developers to create and modify declarative layouts visually, without

requiring hand-editing of XML files. The XML of an Android UI layout can be easily integrated in your Android Apps using AIDE, Eclipse or Android Studio. The designer has the possibility to export and import the layout's XML representation either using the copy&paste or using share with another app.
