Developmental language disorder (DLD) is a type of speech, language and communication need (SLCN) that affects the way that children understand and use language. DLD increases the risk of a range of negative impacts on education, employment, and social and emotional problems, but appropriate support can make a difference. Developmental language disorder - Overview Developmental language disorder (DLD) is identified when

a child has problems with language development that continue into school age and beyond. The language problems have a significant impact on everyday social interactions or educational progress, and occur in the absence of autism spectrum disorder, intellectual disability or a known biomedical condition. Developmental language disorder - Wikipedia Developmental language learning impairments (LLI) are one of the most prevalent of all developmental disabilities, can occur in children for a wide variety of reasons, and have been shown to...(PDF) Developmental Disorders of Language Language & Development Seminar:
