This book uses international case studies to present insights on the policies, actors, and institutions that are critical to successful transit-oriented development (TOD). TOD has many potential benefits for cities and regions, and is considered a critical element in reshaping sprawling car-dependent urban regions into denser regions built around transit corridors. However, it is not a magic bullet solution for metropolitan transportation problems: challenges persist, such as displacement of local residents and regulatory barriers. How has TOD been successfully implemented? How can we integrate the positive aspects of TOD while minimizing its negative impacts? This book presents a study conducted at the University of Amsterdam, exploring 11 international case studies, including a meta-analysis, rough set analysis and policy transfer workshops. The authors discuss the findings and present solutions to persistent challenges to transit-oriented development. Additional literature on eTOD (equitable TOD) strategies, as a fundamental component of planning for regional transportation, shows that these approaches can result in more collaborative processes, community-led development that minimizes the negative impacts of transportation infrastructure. As our Dutch colleagues stated, TOD can be considered a policy concept that can be used as a story to unite people.

This book shows how the systems approach is employed by scientists in various countries to solve specific problems concerning railway transport. In particular, the book describes the experiences of scientists from Romania, Germany, the Czech Republic, the UK, Russia, Ukraine, Lithuania and Poland. For many of these countries there is a problem with the historical differences between the railways. In particular, there are railways with different rail gauges, with different signaling and communication systems, with different energy supplies and, finally, with different political systems, which are reflected in the different approaches to the management of railway economies. The book's content is divided into two main parts, the first of which provides a systematic analysis of individual means of providing and maintaining rail transport. In turn, the second part addresses infrastructure and management development, with particular attention to security issues. Though primarily written for professionals involved in various problems concerning railway transport, the book will also benefit manufacturers, railway technical staff, managers, and students with transport specialties, as well as a wide range of readers interested in learning more about the current state of transport in different countries.

In these two essays, two of the most important French thinkers of our time reflect on each other's work. In so doing, novelist/essayist Maurice Blanchot and philosopher Michel Foucault develop a new perspective on the relationship between subjectivity, fiction, and the will to truth. The two texts present reflections on writing, language, and representation that question the status of the author/subject and explore the notion of a "neutral" voice that arises from the realm of the "outside." This

book is crucial not only to an understanding of these two thinkers, but also to any overview of recent French thought.
