Combinations are the central element in chess; they make the game so magical and captivating. The beautiful point of sacrificing a queen, the strongest piece, in order to checkmate with a lowly pawn brings a smile of joy to all chess lovers. Virtually all chess games possess a combination,

either one hidden in the shadows of analysis carefully avoided or one that provides a decisive blow. Winning Chess Combinations is a unique work that doesn't merely repeat the wonderfully rich and vast numbers of combinations, asking readers to solve a particular diagrammed position; it is a work that is far more realistic. A combination involves a sacrifice upsetting the balance of forces, but will it work or tragically boomerang? The reader is invited to solve this critical question by identifying the advantages that a specific position holds which might make the combination successful.

Stop Hanging Pieces! A completely new kind of chess puzzle helps you develop the necessary visualization skills to take your game to the next level The planning and visualization skills that come from working on Chess Mazes are valuable and instructive. If you are one who often loses games by hanging pieces or missing mates, then this is the book for you. "There are many good books which present chess combinations and explain tactical motifs with the goal of training your tactical ability. Thinking techniques are also well covered in the game's literature. But what about visualization? This is where it is much more difficult to find good material. But now, Bruce Alberston's highly original work fills this gap. "To master his puzzles, you have to exert better control and command of the full potential of all the pieces and you have to visualize their movements in your mind's eye. This sounds more difficult than it is, but in fact only one piece moves in each maze. The result? Excellent training to avoid one-move blunders!" - From the Foreword by German GM Karsten Mueller
