"Physics" 2nd edition is an alternate version of the "College Physics" 3rd edition text by Giambattista/Richardson/Richardson. The key difference is that "Physics" covers kinematics and forces in the more traditional organization of beginning with

Kinematics and proceeding to forces. ("College Physics" takes an integrated approach to forces and kinematics, introducing forces and interweaving kinematics.).

See www.mhhe.com/grr to learn more and register. Giambattista's text website offers online electronic homework along with a myriad of resources for both instructors and students. Instructors can create homework with easy-to-assign algorithmically generated problems from the text and the simplicity of automatic grading and reporting: Text specific end-of-chapter problems and Review and Synthesis exercises appear in the online homework system in diverse formats and with various tools. The online homework system incorporates new and exciting interactive tools and problem types: ranking problems, a graphing tool, a free-body diagram drawing tool, symbolic entry, a math palette, and multi-part problems. Instructors also have access to PowerPoint lecture outlines, an Instructor's Resource Guide with solutions, suggested demonstrations, electronic images from the text, clicker questions, quizzes, tutorials, interactive simulations, and many other resources directly tied to text-specific materials in College physics. Students have access to self-quizzing, interactive simulations, tutorials, selected solutions for the text's problems, and more.

The Student Solutions Manual contains complete worked-out solutions to selected end-of-chapter problems and questions selected Review and Synthesis problems, and the MCAT Review Exercises from the text. The solutions in this manual follow the problem-solving strategy outlined in the text's examples and also guide students in creating diagrams for their own solutions.

Loose Leaf Version for College Physics McGraw-Hill Science/Engineering/Math This book is the product of more than half a century of leadership and innovation in physics education. When the first edition of University Physics by Francis W. Sears and Mark W. Zemansky was published in 1949, it was revolutionary among calculus-based physics textbooks in its emphasis on the fundamental principles of physics and how to apply them. The success of University Physics with generations of (several million) students and educators around the world is a testament to the merits of this approach and to the many innovations it has introduced subsequently. In preparing this First Australian SI edition, our aim was to create a text that is the future of Physics Education in Australia. We have further enhanced and developed University

Physics to assimilate the best ideas from education research with enhanced problem-solving instruction, pioneering visual and conceptual pedagogy, the first systematically enhanced problems, and the most pedagogically proven and widely used online homework and tutorial system in the world, Mastering Physics.

This algebra-based text helps students learn that physics is a tool for understanding the real world, and to teach transferable problem-solving skills that students can use throughout their lives. Some of the most important enhancements in this edition include: inclusion of math topic reviews, new/updated MCAT exam coverage, review and synthesis problems, new biomedical applications, lists of biomedical applications at the beginning of each chapter, new ranking tasks, checkpoints and collaborative problems. Connections have also been enhanced to help students see the bigger picture.
